

Intrinsically-Safe Dual-Channel Switch

Model ISS-102AA-DCS

SymCom's ISS-102AA-DCS is a dual-channel switch with two form-A output relays. The input resistance threshold is fixed at 100k Ω . Each output contact closes upon closure of its associated input switch (input resistance <100k Ω). Resistance probes or switches can be used on the inputs.

The ISS-102AA-DCS has a 0.5-second debounce time delay—the output contact will not change states until a condition exists for 0.5 second—to prevent nuisance actuation and rapid cycling.

Green LEDs illuminate on the ISS-102AA-DCS when the associated output relay is energized.
