Features

Recordable voltage, current, last 4 faults, high temperature detection with Subtrol®-equipped pumps, kWh usage, and power factor are available when using communications package.

Digital programming provides precise customization.

Seventeen setpoints can be programmed for maximum protection.

Last fault memory provides instant troubleshooting diagnostics.

The 777-TS is UL and cUL listed as an overload relay.

RS-485 port can be used to communicate with systems using DeviceNet or Modbus protocol.

Applications

The Model 777-TS can be used on any 3-phase motor drawing from 2-800 Amps. Applications include conveyor systems, HVAC equipment, pumps, saws, grinders and other 3-phase electric motors. In addition, the 777-TS, when used with a *Subtrol®-equipped submersible motor can detect high motor temperatures.

Description

The Model 777-TS is a fully-programmable electronic overload relay. An alphanumeric LED display provides programming and diagnostic information. 17 parameters can be programmed in the Model 777-TS:

1) Low voltage
2) High voltage
3) Voltage unbalance
4) Temp. sensor on/off
5) CT size/loop setting
6) Overcurrent
7) Undercurrent
8) Current unbalance
9) Trip class (5, 10, 15, 20, 30)
10) Rapid-cycle timer (RD1)
11) Overload restart delay (RD2)
12) Underload restart delay (RD3 - dry-well recovery timer)
13) No. of restarts after an overload (manual or automatic)
14) RS-485 address
15) No. of restarts after an underload fault
16) Underload trip delay
17) Ground fault

Programming the Model 777-TS is an easy four step process: 1) Rotate the MODE SELECT switch to the parameter to be programmed; 2) Press and hold the RESET/PROGRAM button; 3) Rotate the DISPLAY/PROGRAM dial to the desired setting as shown in the LED display; and 4) Release the RESET/PROGRAM button.

An RS-485 port allows the Model 777-TS to be connected to an RM-1000 or RM-2000 remote monitor or directly to a computer or PLC. The RM-2000/777-TS motor management system combines unsurpassed electronic motor protection and critical, user-friendly motor monitoring. SymCom's Solutions software (sold separately) can be used to monitor and control up to 99 Model 777-TSs from a central computer. Using Solutions software, an operator can control motors, view the operating parameters, and record the following operating parameters:

- Line - Line Voltages (Recordable)
- Line Currents (Recordable)
- Last 4 Faults (Recordable)
- Restart Delay Timers
- kWh Usage (Recordable)
- Power Factor (Recordable)

*Subtrol is a registered trademark of Franklin Electric Co., Inc.

Protects 3-Phase Motors from:

- **High temperature**
- Overload
- Underload
- Jams
- Undervoltage
- Overvoltage
- Single phasing
- Unbalance (voltage & current)
- Ground fault (Class II)
- Rapid cycling
- Phase reversal

Additional Features

- Fully programmable
- UL and cUL listed
- CE compliant
- CSA approved
- Automatic or manual reset
- Tamper guard
- RS-485 communications port
- Surface or DIN rail mountable
- Diagnostic display
- Last fault memory
- 5-year warranty
- Made in USA

New Features

- Network programmable
- Ability to clear last fault

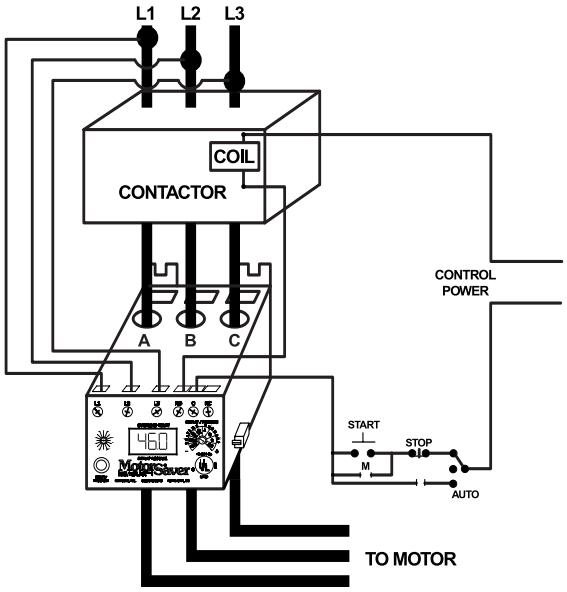
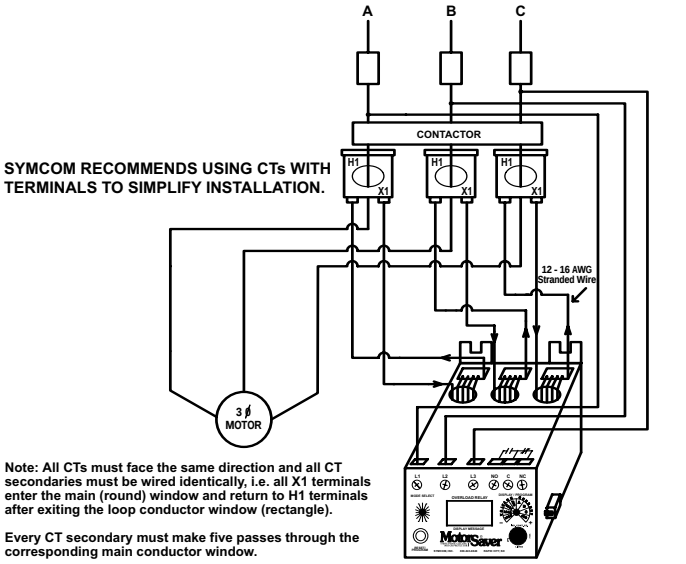
TYPICAL WIRING DIAGRAM FOR MODEL 777-TS (20 - 90 AMPS)



CURRENT TRANSFORMER WIRING DIAGRAM FOR MODEL 777-TS (80-800 AMPS)



SYMCOM RECOMMENDS USING CTs WITH TERMINALS TO SIMPLIFY INSTALLATION.

Note: All CTs must face the same direction and all CT secondaries must be wired identically, i.e. all X1 terminals enter the main (round) window and return to H1 terminals after exiting the loop conductor window (rectangle).

Every CT secondary must make five passes through the corresponding main conductor window.

Wiring configuration based on motor amps.

Overload Relays

COM-DN

The optional COM-DN DeviceNet Communications Module allows the Model 777-TS-type products to be easily used on a DeviceNet fieldbus.The COM-DN meets ODVA requirements for a slave only overload-type device. The COM-DN supports explicit and polled messaging as well as automatic node recovery. The EDS file allows easy setup with third party configuration tools.

RS485MS-2W

The optional RS485MS-2W communications module is required if Model 777-TS-type products are used on a Modbus network or with RM-1000 or RM-2000 remote displays. The communications module provides RS-485 bus drive capabilities and optical isolation from the overload electronics and powerline.

RM-1000

The RM-1000 is a local display/controller with RS-485 Modbus network capabilities. Its modular design allows for flexible, inexpensive installation yet provides robust motor management. Plant personnel safety is also enhanced by allowing system troubleshooting and control without opening the starter box.

RM-2000

The RM-2000 motor monitoring device, used in conjunction with SymCom's Model 777-TS, provides a complete motor management system. This system provides full electronic motor protection, historical data and critical, user-friendly, motor-monitoring information. The RM-2000 also features a real-time clock, 2x20 backlit LCD, one upstream RS-485 Modbus communication port and is rated NEMA-3R when mounted on a panel door.

777-TS Manual Remote Reset Kit

The manual remote reset allows the 777-TS line of MotorSaver® and PumpSaver® products to be manually reset without opening the panel door. Simply connect the 9-pin adapter to the 777-TS communication port and mount the reset switch in a convenient location.

NOTES: SymCom's 777-TS & 777-LR-TS can be preprogrammed prior to installation by applying 120 VAC between the L1 and L2 terminals.

* 575 volt Model (MS 777-575-TS)

** If J prefix is displayed in trip class setting, jam protection is enabled.

*** If "oc" is disabled in the #RF setting, the overcurrent will be included as a normal fault and the relay will automatically restart after RD2 expires,otherwise, manual reset is required after an overcurrent fault.
