

Electrical shock can cause death or serious injury.

Installation should be done by qualified personnel following all national, state and local electrical codes.

Figure 2: Typical Alarm Wiring Diagram

SETTINGS

1. **LINE VOLTAGE ADJUSTMENT:** Rotate the LINE VOLTAGE ADJUSTMENT to the nominal three-phase line voltage feeding the motor.

POWER-UP

Turn on the power to the motor. The MotorSaver® then goes through its restart delay and the LED will flash green (see Table 1). After the restart delay, the MotorSaver® will energize its output contacts and the RUN LIGHT will turn solid green. If the contacts do not energize and the RUN LIGHT does not turn solid green, then see the TROUBLESHOOTING section.

RUN	GREEN
RESTART DELAY	 GREEN
REVERSE PHASE	 RED
UNBALANCE / SINGLE PHASE	 RED
HIGH / LOW VOLTAGE	RED

Table 1: Diagnostic Indicator Lights

TROUBLESHOOTING

SYMPTOM	LIGHT PATTERN	SOLUTION
No lights are on. The unit seems completely dead	N/A	Measure the three line-to-line voltages. If any of the voltages are below 150 VAC, the MotorSaver® does not have enough power to operate its internal electronics. This may occur on a single-phased system. If the voltages are correct, call SymCom at 1-800-843-8848 or 1-605-348-5580.
Red light is blinking (On initial installation power up).	 RED	Turn off the three-phase power. Swap any two leads powering the MotorSaver® (L1, L2, or L3). There is a 50-50 chance of connecting L1, L2, and L3 correctly the first time. Re-apply the three-phase power.
Red light is blinking (After the motor has been previously running).	 RED	The incoming lines have been reverse phased. The MotorSaver® is preventing the motor from running backwards. Correct the phase sequence.
Red light is blinking in this pattern.	 RED	The voltage is unbalanced or single-phased. Measure the incoming line voltages and calculate the % unbalance. If the voltage unbalance does not exceed the % unbalance reset value, call SymCom at 1-800-843-8848 or 1-605-348-5580.
Red light is on steady.	RED	The voltage is out of tolerance. Measure the three line-to-line voltages. Calculate the average of the three voltages. If the average is 7% above or below the nominal voltage as selected by the LINE VOLTAGE ADJUST, the MotorSaver® is functioning properly. If the voltage is within $\pm 7\%$ of the selected line voltage, call SymCom at 1-800-843-8848 or 1-605-348-5580.
Green light blinks, but motor is not running.	 GREEN	The MotorSaver® is in restart delay.
Green light is on steady, but motor does not start.	GREEN	The MotorSaver® is in run mode. Ensure other control devices are allowing the motor to start. Check control circuit for loose wires or malfunctioning switches.

SymCom warrants its microcontroller based products against defects in material or workmanship for a period of five (5) years* from the date of manufacture. All other products manufactured by SymCom shall be warranted against defects in material and workmanship for a period of two (2) years from the date of manufacture. For complete information on warranty, liability, terms, and conditions, please refer to the SymCom Terms and Conditions of Sale document.

* The 520 Series has a one (1) year warranty and the LSRU series has a two (2) year warranty.

SPECIFICATIONS

3-Phase Line Voltage	475 to 600 VAC
Frequency	50 or 60 Hz
<i>Note: 50 Hz will increase all delay timers by 20%</i>	
Low Voltage (% of setpoint)	
Trip	90%
Reset	93%
Voltage Unbalance (NEMA)	
Trip	6%
Reset	4.5%
Trip Delay Time	
Low Voltage Faults	4 Seconds
Unbalance / Phasing Faults	2 Seconds
Restart Delay Time	
After a fault or complete power loss	2 Seconds
Output Contact Rating - SPDT	
Pilot Duty	480 VA @ 240 VAC
General Purpose	10 A @ 240 VAC
Transient Protection	IEC 1000-4-5 ; 1995 ± 6 kv
Power Consumption	5 Watts (maximum)
Weight	14 Ounces
Terminal	
Wire AWG	12-22 Gauge
Maximum Torque	7 inch-pounds
Operating Temperature	-40° to +70° C
UL	E68520
