

MODEL 261 series Alternating Relays

- Solid-state Reliability
- Heavy-duty Contact Rating
- Optional Load 1-Load 2 Toggle
- UL Recognized; CSA Certified

DESCRIPTION

The **Model 261 series Alternating Relay** is designed for duplex pumping systems where it is desirable to equalize pump run time. The solid state alternating circuit drives an internal electromechanical relay. A continuous power source and control switch are required.

The control switch (float, pressure or other isolated contact) is connected between the L1 terminal and the control terminal. Each time the control switch is opened the output contacts will change states. Indicator lights on the case show the internal relay status.

On the optional toggle switch versions, the toggle switch is set to the **NORMAL** position. Setting the switch to Load 1 or Load 2 will lock the relay in position, preventing alternation.

Installation Instructions

INSTALLATION

Connect wiring to the socket as indicated in the following examples.

The Model 261 series Alternating Relays are extremely versatile and can be used in many other configurations besides those shown. Any type of switch (float, pressure, etc.) can be used as the control switch; however, it must be connected as shown (from L1 to the control input) or the alternator will not function properly.

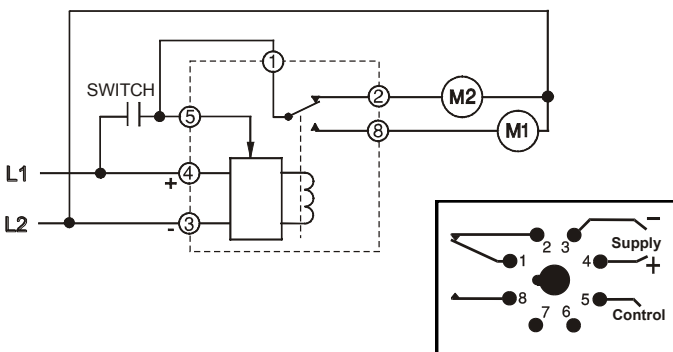

On Toggle Versions: For normal operation (alternating loads) set the toggle switch on the top of the case to the "normal" position. Setting the toggle switch to either "1" or "2" will lock the alternator in that position.
