

Replacing the Toshiba PR00046P12 with the Toshiba 00374

Use 00374 for applications using the VTG1 460v 40-100HP drives. No gain class required. 03474 may be used, but the gain class is not critical.

Use 03474 for applications using the VTG1 460v 125-400hp drives. Replacement devices must match gain class of existing. Replacement of devices used in parallel is highly recommended. These are typically in sets of 3. Likelihood of premature failure of devices exists if all devices are not replaced.
