

## FDNP-L0016H-TT/CS30007

This station provides a connection for up to sixteen outputs. There are two outputs per connector.

To turn on an output, simply set the corresponding output bit. The output will switch high and the LED will turn green. If the output is shorted the module status LED will flash red and the output status bit will be set. All output circuits are individually short circuit protected.

The node address can be set using the rotary switches located under the device cover or through software node commissioning. The communication rate is fixed at 500 kbps (Auto-Baud is disabled).

The FDNP-I0016H-TT/CS30007 supports explicit messaging, polled, change of state, and cyclic I/O messages. These connections are established through UCMM or predefined master/slave connection set.

Recommended Cordsets:

Bus line: RSM RKM 579-\*M

Auxiliary power: RSM RKM 47- \*M

Output: RK 4.4T-\*RS 4.4T
