

VIZ-TORQUE[®]

TAMPER DETECTION MARKER

VISUALLY IDENTIFY LOOSE FASTENERS

Viz-Torque is an inspection paste applied across completed fittings, assemblies, nuts, bolts and studs to show whether a part has been moved from its original position.

Vibra-TITE[®]

Easy to use

Simply apply a single bead of Viz-Torque material across the assembled fasteners and allow to dry. No need to prepare surfaces.

Fast Identification

A bright, highly visible colored paste which will fluoresce under black light, making it easy to detect without requiring testing.

Dries Quick

Skins over in 20 seconds, dries in 20 minutes and is fully cured in 24 hours. Dry time can be reduced by increasing air flow.

WHY USE VIZ-TORQUE?

Once dried in place, Viz-Torque is resistant to environmental elements, but brittle and fragile enough to consistently break in the case of tampering or loss of torque. Early detection of a loose fastener helps prevent collateral damage and limits time and cost associated with repairs.

FEATURES

- ✔ Exhibits good adhesion to most metals when applied to a clean, dry surface.
- ✔ Helps quality control by providing warranty management in the event of tampering.
- ✔ Does not easily wash off with water or mild solvents.
- ✔ Compatible with most metals, paints and plastics.

COLORS

1 oz. tube of Viz-Torque is available in a variety of colors to meet your visual identification needs.

COLOR	NUMBER	COLOR	NUMBER
