

Technical Data Sheet
Vibra-Tite® 333
Cyanoacrylate
February 2012

Product Description

Vibra-TITE 333 is a single component medium viscosity cyanoacrylate adhesive. Fast setting and ideal for rubber and p lastic b onding a pplications. I t is p articularly designed to set and adhesre rapidly to inactive surfaces.

Physical Properties

Monomer (Liquid)

Base Compound	Ethyl Cyanoacrylate
Appearance	Colorless Liquid
Viscosity (cP @ 68°F)	180 cP
Specific Gravity (a/ac)	1.06

Specific Gravity (g/cc) 1.06 Flash Point (TCC) 185°F

Shelf Life @40°F 1 year unopened

Military Specifications

Mil-A-46050C Type II, Class 3

Curing Properties

Ambient's urface moisture will in itiate the hardening process. Handling strength is reached in a short period of time and varies depending on environmental conditions and substrates being bonded. Product will continue to cure for at least 24 hours before full strength and resistances are developed.

Setting Time (68 °F, 65% R.H.)

	,	, ,
Steel		10 to 25 seconds
Aluminum		7 to 14 seconds
Neoprene		< 4 seconds
ABS		5 to 9 seconds
Polycarbonate		10 to20 seconds
PVC		10 to 15 seconds

Curing Performance

The gap of the bond line will affect set speed. S maller gaps t end to i ncrease the s peed. A ctivators can be applied to improve set speed but may also impair overall adhesive performance.

Polymer (Cured)

Appearance	Colorless Solid
Service T emperature	-65°F to 200°F
Range	
Softening Point	329°F
Refractive Index	1.49
(ND 20)	
Full Cure Time	24 Hours
Dielectric S trength	11.6
(KV/mm)	
Dielectric Constant	5.4
(@ 1Kc)	
COE (in./in./F)	.000126
Tensile S trength	3000 psi
(steel/steel)	
Solubility	Nitromethane,
	Acetone,
	Dimethylformamide

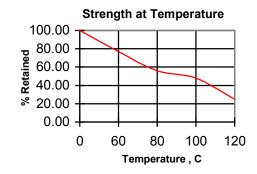

Performance of Cured Materials

Tensile Shear strength after 48 hours at 20° to 25°C

Substrate	Range in N/mm2
Blasted Steel	13 to 18
Etched Aluminum	12 to 20
Neoprene	> 10
ABS	> 6
Polycarbonate	> 5
PVC	> 6

Temperature Resistance

Sheer Strength on steel after 1 week at 22 °C

General Instructions

Surfaces to be bonded should be clean and dry. Dispense a drop or drops to one surface only. A pply only enough to leave a thin film layer after compression. Press p arts t ogether and h old firmly for a f ew s econds. Good contact is essential. An adequate bond develops in less that one minute and maximum strength is attained in 24 hours.

Wipe off excess adhesive from the top of the container and recap. C yanoacrylate p roducts i fl eft u ncapped m ay deteriorate by contamination from moisture in the air.

Because Cyanoacrylate p roducts cu re b y p olymerization, whitening may appear on the surface of the container or the bonded materials. S hould this happen, wipe surfaces well with acetone.

For safe handling information on this product, consult the Material Safety Data Sheet, (MSDS)

General Information

Storage

Store out of direct sunlight. Refrigeration at 40°F provides optimum storage stability. Bring to room temperature before use.

Note

Prior to use, remove all surface contaminants such as oil or grease. Products like isopropyl alcohol can be used. Test compatibility of cleaner with substrate.

Make sure surface is completely dry before bonding.

Health & Safety in use

CAUTION: SuperGlues bond skin and eyes on contact. If accidental skin bonding occurs, wash area with warm soapy water a nd s lowly p ry s kin a part us ing a b lunt object (such as a teaspoon handle.) In case of eye contact, b athe i mmediately with water a nd s eek immediate medical attention.
