Item description

This 2-channel analog input module processes differential signals ranging from 4–20 mA.

The input signal is transmitted with a resolution of 13 bits.

The channels are electrically isolated from one another and from the system level.

The system supply powers the module.

The shield (screen) is directly connected to the DIN-rail.

- Measured value acquisition: time synchronous (both inputs)
- Measurement range overflow/underflow: status byte and LED
- Conversion method: SAR (Successive Approximation Register)
- Operating mode: continuously sampling (default)
- Protection: non-linear limiting

The device is ideal for operation in extreme environments:

- Extended temperature range
- Greater immunity to impulse voltages and electromagnetic interference
- Higher vibration and shock resistance
