Item description

This module is a 1-channel intelligent positioning controller for 24V DC motors up to 5A with incremental position feedback. Three 24V inputs record the limit switches and a preset signal. An incremental encoder interface evaluates the signals from the position transmitter and determines actual value.

If required, the positioning optimizes the pre-stop position depending on direction and takes backlash compensation into account.

Bi-directional control of the DC motor is done via short-circuit proof and temperature-monitored H-bridge. Both switched operation and soft-start /stop or current reduction are possible through PWM control.

The field-side 24V supply voltage (20-28VDC) from the power contacts, which is monitored for undervoltage/overvoltage events, is looped through to adjacent modules.
