SLIM LED | MACHINE LUMINAIRE

SLIM LED. FLOOD LIGHTING MADE TO MEASURE

The SLIM LED is the lighting solution for machines and equipment with space-constraints and limited installation space.

The sleek profile of the luminaire is not one millimeter higher and wider than necessary. The luminous power, in contrast, is tremendous. SLIM LED luminaires are equipped with the latest LED technology. This allows large-scale and powerful illumination of machine workplaces. In addition, the light emission direction can be individually adjusted.

Speaking of individuality: SLIM LED luminaires are available in lengths ranging from 196 mm – flood lighting made to measure. This creates flexible usage options in a wide variety of applications, with protection class IP 67, such as:

Machine tools (magazine tools, feeding), sheet metal working (bending, edging, stamping, cutting), saws, printing machines, packaging machines, textile machines, automation technology, image processing, etc.

The high-tech aluminum profile effectively protects the LEDs from damage by mechanical influences. Without additional operating devices, the luminaire is directly connected to 24 volt direct current.

Available in lengths from 196 mm to 1176 mm

50,000 HOURS OF LIGHTING EFFICIENCY

Optimum light is ensured by the latest LED technology – LINEAR-light POWER Flex. The special feature is that the LEDs are attached to a flexible circuit board. The luminaire can be varied in length in increments of 140 mm.

The LEDs have a minimum service life of 50,000 operating hours. This means: 6 years of continuous light without replacing lamps, minimal maintenance costs, and high energy cost savings, as the LED is by far more

efficient than an incandescent lamp with comparable luminosity.

A system comparison shows: A 60 watt incandescent lamp provides 11 lumen per watt. LED OSRAM LINEAR-light puts out 50 lumen per watt, which is approximately 5 times more luminous intensity. For this reason, the use of LED technology is also an active contribution to lower energy consumption and electricity costs.

TOUGH AND RUGGED

The SLIM LED was created for use under extreme conditions.

Thanks to a high-tech potting compound consisting of premium adhesive resin, the luminaire is absolutely water and dust-tight according to IP 67.

The potting compound is directly applied at Waldmann. For this purpose, a proprietary manufacturing system was developed and implemented in

the production operation of Waldmann.

In LED technology, the light is produced electronically and not via a glow wire as in conventional lamps. As it requires no glow wire, there is also no risk of breakage due to mechanical strain. SLIM LED luminaires are therefore also absolutely unsuceptible to vibrations and impact.

The profile developed by Waldmann specifically for the SLIM LED is made of anodized and there-

fore indestructible aluminum. The cable is made of durable polyurethane.

The sleek and flat profile allows the SLIM LED to provide optimal light in areas where previously no room existed for the installation of a luminaire.

The SLIM LED is a luminaire that withstands extreme conditions. It's a product made by professionals for professionals.

THE RIGHT SETTING FOR ANY APPLICATION

The base version is typically always cast with a high-tech potting compound and is water and dust-tight in accordance with protection class IP 67.

Variant 1 additionally contains a clear acrylic screen to offer protection from coarse mechanical influences – such as metal chips.

Variant 2 is equipped with a brushed acrylic screen. This produces a broadly scattered, diffuse light and prevents glare from reflections.

Another feature option allows the continuously variable adjustment of the lighting direction at an angle of $\pm 45^\circ$.

The assembly too is done in no time at all – regardless of the variant: The base version is attached to the machine wall by way of two metal tabs. On the rotatable variant, a carrier profile is first installed and the rotating module is then simply snapped into the profile.

The SLIM LED offers extremely flexible use in a variety of applications. It is directly connected to 24 volt direct current. The integrated circuit board matches the connecting voltage optimally to the LED and automatically compensates for voltage fluctuations of ± 1 volt.

An additional operating device or transformer is not required. As a result, the procurement cost, installation time, and maintenance cost are minimized.

SLIM LED – THE SPECIAL FEATURES AT A GLANCE.

SLIM LED

TECHNICAL DATA

Connected load	24 V (DC) +/- 1 Volt
Housing	Anodized aluminum
Connecting line	approx. 3.0 m
Angle of reflected beam	wide-spread
Lamp cover	Base version: potted Variant 1: clear screen Variant 2: brushed screen
Material of side part	rigid metal adjustable polyamide
Protection rating	III
Protection class	IP 67

ITEM NO.	DESCRIPTION	TOTAL LENGTH A	OUTPUT	TECHNOLOGY	SCREEN
112 544 000	LIQ 6	196 mm	3.6 watt	adjustable	clear

ACCESSORIES

Operating device for LED machine luminaires

Item no.	209 585 029
Connected load	120-240 V, 50/60 Hz
Output voltage	24 volt (DC)
Power	20 Watt
Assembly	Clip for top-hat DIN rail
