| Easily Set Parameters for Specific Applications |  |  |
| :--- | :--- | :---: |
| Preset parameter defaults are available for setting up applications. Refer to Application Selection on <br> page 91. |  |  |

## Run a Motor One Frame Larger

This drive can operate a motor one frame size larger when running variable torque loads such as fans and pumps. Refer to C6-01: Drive Duty Mode Selection on page 100.

## Drive a Synchronous PM Motor

A1000 can operate synchronous PM motors. Refer to Subchart A-3: Operation with Permanent Magnet Motors on page 89. <99>

$<99>$ PM motor control modes are not available on 600 V class drives, CIMR-A $\square$ 5 $\square \square \square \square \square \square$.

| Perform Auto-Tuning |
| :--- |
| Automatic tuning sets motor parameters. Refer to Auto-Tuning on page 121. |
| Maintenance Check Using Drive Monitors <br> Use drive monitors to check if fans, capacitors, or other components require maintenance. Refer to Performance Life Monitors Maintenance <br> Monitors on page 163. |

## Fault Display and Troubleshooting

Refer to Drive Alarms, Faults, and Errors on page 134.
Sefer to European Standards on page 250 and Refer to UL and CSA Standards on page $258<1>$.
<1> CE marking applies to 200 V class and 400 V class models only.

## Preface \& General Safety

This section provides safety messages pertinent to this product that, if not heeded, may result in fatality, personal injury, or equipment damage. Yaskawa is not responsible for the consequences of ignoring these instructions.
i. 1 PREFACE. ..... 12
i. 2 GENERAL SAFETY ..... 13

## i. 1 Preface

Yaskawa manufactures products used as components in a wide variety of industrial systems and equipment. The selection and application of Yaskawa products remain the responsibility of the equipment manufacturer or end user. Yaskawa accepts no responsibility for the way its products are incorporated into the final system design. Under no circumstances should any Yaskawa product be incorporated into any product or design as the exclusive or sole safety control. Without exception, all controls should be designed to detect faults dynamically and fail safely under all circumstances. All systems or equipment designed to incorporate a product manufactured by Yaskawa must be supplied to the end user with appropriate warnings and instructions as to the safe use and operation of that part. Any warnings provided by Yaskawa must be promptly provided to the end user. Yaskawa offers an express warranty only as to the quality of its products in conforming to standards and specifications published in the Yaskawa manual. NO OTHER WARRANTY, EXPRESS OR IMPLIED, IS OFFERED. Yaskawa assumes no liability for any personal injury, property damage, losses, or claims arising from misapplication of its products.
This manual is designed to ensure correct and suitable application of A1000-Series Drives. Read this manual before attempting to install, operate, maintain, or inspect a drive and keep it in a safe, convenient location for future reference. Be sure you understand all precautions and safety information before attempting application.

## Applicable Documentation

The following manuals are available for A1000 series drives:

| A1000 Series AC Drive Quick Start Guide (TOEPC71061641) |
| :--- |
| Read this guide first. This guide is packaged together with the product and contains basic information <br> required to install and wire the drive. It also gives an overview of fault diagnostics, maintenance, and <br> parameter settings. The purpose of this guide is to prepare the drive for a trial run with an application and <br> for basic operation. This manual is available for download on our documentation website, <br> www.yaskawa.com. |
| A1000 Series AC Drive Technical Manual (SIEPC71061641) |
| This manual provides detailed information on parameter settings, drive functions, and MEMOBUS/ <br> Modbus specifications. Use this manual to expand drive functionality and to take advantage of higher <br> performance features. This manual is available for download on our documentation website, <br> www.yaskawa.com. |

## i. 2 General Safety

## Supplemental Safety Information

## General Precautions

- The diagrams in this manual may be indicated without covers or safety shields to show details. Replace the covers or shields before operating the drive and run the drive according to the instructions described in this manual.
- Any illustrations, photographs, or examples used in this manual are provided as examples only and may not apply to all products to which this manual is applicable.
- The products and specifications described in this manual or the content and presentation of the manual may be changed without notice to improve the product and/or the manual.
- When ordering a new copy of the manual due to damage or loss, contact your Yaskawa representative or the nearest Yaskawa sales office and provide the manual number shown on the front cover.
- If nameplate becomes worn or damaged, order a replacement from your Yaskawa representative or the nearest Yaskawa sales office.

## A WARNING

Read and understand this manual before installing, operating or servicing this drive. The drive must be installed according to this manual and local codes.
The following conventions are used to indicate safety messages in this manual. Failure to heed these messages could result in serious or fatal injury or damage to the products or to related equipment and systems.

## ! DANGER

Indicates a hazardous situation, which, if not avoided, will result in death or serious injury.

## A WARNING

Indicates a hazardous situation, which, if not avoided, could result in death or serious injury.
WARNING! may also be indicated by a bold key word embedded in the text followed by an italicized safety message.

## A CAUTION

Indicates a hazardous situation, which, if not avoided, could result in minor or moderate injury.
CAUTION! may also be indicated by a bold key word embedded in the text followed by an italicized safety message.

## NOTICE

## Indicates a property damage message.

NOTICE: may also be indicated by a bold key word embedded in the text followed by an italicized safety message.

## Safety Messages

## DANGER

Heed the safety messages in this manual.
Failure to comply will result in death or serious injury.
The operating company is responsible for any injuries or equipment damage resulting from failure to heed the warnings in this manual.

## Electrical Shock Hazard

Do not connect or disconnect wiring while the power is on.
Failure to comply will result in death or serious injury.
Before servicing, disconnect all power to the equipment. The internal capacitor remains charged even after the power supply is turned off. After shutting off the power, wait for at least the amount of time specified on the drive before touching any components.

## A WARNING

## Sudden Movement Hazard

System may start unexpectedly upon application of power, resulting in death or serious injury.
Clear all personnel from the drive, motor and machine area before applying power. Secure covers, couplings, shaft keys and machine loads before applying power to the drive.
When using DriveWorksEZ to create custom programming, the drive I/O terminal functions change from factory settings and the drive will not perform as outlined in this manual.
Unpredictable equipment operation may result in death or serious injury.
Take special note of custom I/O programming in the drive before attempting to operate equipment.

## Electrical Shock Hazard

Do not attempt to modify or alter the drive in any way not explained in this manual.
Failure to comply could result in death or serious injury.
Yaskawa is not responsible for any modification of the product made by the user. This product must not be modified.
Do not allow unqualified personnel to use equipment.
Failure to comply could result in death or serious injury.
Maintenance, inspection, and replacement of parts must be performed only by authorized personnel familiar with installation, adjustment and maintenance of AC drives.
Do not remove covers or touch circuit boards while the power is on.
Failure to comply could result in death or serious injury.
Make sure the protective earthing conductor complies with technical standards and local safety regulations.
Because the leakage current exceeds 3.5 mA in models CIMR-AD4A0414 and larger, IEC 61800-5-1 states that either the power supply must be automatically disconnected in case of discontinuity of the protective earthing conductor or a protective earthing conductor with a cross-section of at least $10 \mathrm{~mm}^{2}(\mathrm{Cu})$ or $16 \mathrm{~mm}^{2}(\mathrm{Al})$ must be used. Failure to comply may result in death or serious injury.
Always use appropriate equipment for Ground Fault Circuit Interrupters (GFCIs).
The drive can cause a residual current with a DC component in the protective earthing conductor. Where a residual current operated protective or monitoring device is used for protection in case of direct or indirect contact, always use a type B GFCI according to IEC 60755.

## Fire Hazard

Do not use an improper voltage source.
Failure to comply could result in death or serious injury by fire.
Verify that the rated voltage of the drive matches the voltage of the incoming power supply before applying power.

## A WARNING

## Crush Hazard

Do not use this drive in lifting applications without installing external safety circuitry to prevent accidental dropping of the load.
The drive does not possess built-in load drop protection for lifting applications.
Failure to comply could result in death or serious injury from falling loads.
Install electrical and/or mechanical safety circuit mechanisms independent of drive circuitry.

| CAUTION |
| :--- | :--- |
| Do not carry the drive by the front cover. |
| Failure to comply mazard result in minor or moderate injury from the main body of the drive falling. |

## NOTICE

Observe proper electrostatic discharge procedures (ESD) when handling the drive and circuit boards.
Failure to comply may result in ESD damage to the drive circuitry.
Do not perform a withstand voltage test on any part of the drive.
Failure to comply could result in damage to the sensitive devices within the drive.
Do not operate damaged equipment.
Failure to comply could result in further damage to the equipment.
Do not connect or operate any equipment with visible damage or missing parts.
Install adequate branch circuit short circuit protection per applicable codes.
Failure to comply could result in damage to the drive.
The drive is suitable for use on a circuit capable of delivering not more than 100,000 RMS symmetrical Amperes, 240 Vac maximum ( 200 V Class), 480 Vac maximum ( 400 V Class), and 600 Vac maximum ( 600 V Class) when protected by Bussmann Type FWH or FWP fuses as specified in Installing Fuses on the Input Side on page 250.
Do not expose the drive to halogen group disinfectants.
Failure to comply may cause damage to the electrical components in the drive.
Do not pack the drive in wooden materials that have been fumigated or sterilized.
Do not sterilize the entire package after the product is packed.

## - General Application Precautions

## Selection

## Installing a Reactor

Use an AC reactor or DC link choke in the following situations:

- to suppress harmonic current.
- to smooth peak current that results from capacitor switching.
- when the power supply is above 600 kVA .
- when the drive is running from a power supply system with thyristor converters.

Note: A DC link choke is built in to drive models CIMR-AD2A110 to 2A0415 and 4A0058 to 4A1200.

Figure i. 1 Installing a Reactor

## Drive Capacity

For specialized motors, make sure that the motor rated current is less than the rated output current for the drive.
When running more than one motor in parallel from a single drive, the capacity of the drive should be larger than [total motor rated current $\times 1.1]$.

## Starting Torque

The overload rating for the drive determines the starting and accelerating characteristics of the motor. Expect lower torque than when running from line power. To get more starting torque, use a larger drive or increase both the motor and drive capacity.

## Emergency Stop

When the drive faults out, the output shuts off but the motor does not stop immediately. A mechanical brake may be required when it is necessary to stop the motor faster than the ability of the Fast Stop function of the drive.

## Options

NOTICE: The B1, B2, +1, +2, and +3 terminals are used to connect optional A1000-compatible devices only. Connecting non-Yaskawaapproved devices to these terminals may damage the drive.

## Repetitive Starting/Stopping

Laundry machines, punching presses, and other applications with frequent starts and stops often approach $150 \%$ of their rated current values. Heat stress generated from repetitive high current will shorten the life span of the IGBTs.
Yaskawa recommends lowering the carrier frequency, particularly when audible noise is not a concern. It is beneficial to reduce the load, increase the acceleration and deceleration times, or switch to a larger drive to help keep peak current levels under $150 \%$. Be sure to check the peak current levels when starting and stopping repeatedly during the initial test run, and make adjustments accordingly.

## Installation

## Enclosure Panels

Keep the drive in a clean environment by installing the drive in an enclosure panel or selecting an installation area free of airborne dust, lint, and oil mist. Be sure to leave the required space between drives to provide for cooling, and take proper measures so the ambient temperature remains within allowable limits and keep flammable materials away from the drive. Yaskawa offers protective designs for drives that must be used in areas subjected to oil mist and excessive vibration. Contact Yaskawa or your Yaskawa agent for details.

## Installation Direction

NOTICE: Install the drive upright as specified in the manual. Refer to Mechanical Installation on page $\mathbf{2 8}$ for more information on installation. Failure to comply may damage the drive due to improper cooling.

## Settings

## Motor Code

When using OLV/PM, set the proper motor code to parameter E5-01 before performing a trial run.

[^0]
## Acceleration/Deceleration Times

Acceleration and deceleration times are affected by the amount of torque generated by the motor, the load torque, and the inertia moment. Set a longer accel/decel time when Stall Prevention is enabled. The accel/decel times are lengthened for as long as the Stall Prevention function is in operation. Install one of the available braking options or increase the capacity of the drive for faster acceleration and deceleration.

## General Handling

## Wiring Check

NOTICE: Do not connect power supply lines to output terminals U/T1, V/T2, or W/T3. Failure to comply will destroy the drive. Be sure to perform a final check of all sequence wiring and other connections before turning on the power and also check for short circuits on the control terminals, which may damage the drive.

## Selecting a Circuit Breaker or Circuit Interrupter

Yaskawa recommends installing a Ground Fault Circuit Interrupter (GFCI) to the power supply side. The GFCI should be designed for use with AC drives (e.g., Type B according to IEC 60755).
Select a Molded Case Circuit Breaker (MCCB) or GFCI with a rated current 1.5 to 2 times higher than the drive rated input current to avoid nuisance trips caused by harmonics in the drive input current.
NOTICE: Prevent Equipment Damage. Install a fuse and a GFCI in models CIMR-AD4A0930 and 4A1200. Failure to comply may result in serious damage to the facilities if the drive is defective.

## Magnetic Contactor Installation

WARNING! Fire Hazard. Shut off the drive with a magnetic contactor (MC) when a fault occurs in any external equipment such as braking resistors. Failure to comply may cause resistor overheating, fire, and injury to personnel.

NOTICE: To get the full performance life out of the electrolytic capacitors and circuit relays, refrain from switching the drive power supply off and on more than once every 30 minutes. Frequent use can damage the drive. Use the drive to stop and start the motor.

## Inspection and Maintenance

WARNING! Electrical Shock Hazard. Capacitors in the drive do not immediately discharge after shutting off the power. Wait for at least the amount of time specified on the drive before touching any components after shutting off the power. Failure to comply may cause injury to personnel from electrical shock.

WARNING! Electrical Shock Hazard. When a drive is running a PM motor, voltage continues to be generated at the motor terminals after the drive is shut off while the motor coasts to stop. Take the precautions described below to prevent shock and injury:

- In applications where the machine can still rotate after the drive has fully stopped a load, install a switch to the drive output side to disconnect the motor and the drive.
- Do not allow an external force to rotate the motor beyond the maximum allowable speed or to rotate the motor when the drive has been shut off.
- Wait for at least the time specified on the warning label after opening the load switch on the output side before inspecting the drive or performing any maintenance.
- Do not open and close the load switch while the motor is running.
- If the motor is coasting, make sure the power to the drive is turned on and the drive output has completely stopped before closing the load switch.

WARNING! Burn Hazard. Because the heatsink can get very hot during operation, take proper precautions to prevent burns. When replacing the cooling fan, shut off the power and wait at least 15 minutes to be sure that the heatsink has cooled down. Failure to comply may cause burn injury to personnel.

## Wiring

Yaskawa recommends using ring terminals on all drive models. Drive models CIMR-AD2A0069 to 2A0415 and 4A0058 to 4A1200 require the use of use ring terminals for UL/cUL compliance. Use only the tools recommended by the terminal manufacturer for crimping.

## Transporting the Drive

NOTICE: Never steam clean the drive. During transport, keep the drive from coming into contact with salts, fluorine, bromine, phthalate ester, and other such harmful chemicals.

## Motor Application Precautions

## Standard Induction Motors

## Low-Speed Range

The cooling fan of a standard motor should sufficiently cool the motor at the rated speed. As the self-cooling capability of such a motor reduces with the speed, applying full torque at low speed will possibly damage the motor. Reduce the load torque as the motor slows to prevent motor damage from overheat. Figure i. 2 shows the allowable load characteristics for a Yaskawa standard motor. Use a motor designed specifically for operation with a drive when $100 \%$ continuous torque is needed at low speeds.

Figure i. 2 Allowable Load Characteristics for a Yaskawa Motor

## Insulation Tolerance

NOTICE: Consider motor voltage tolerance levels and motor insulation in applications with an input voltage of over 440 V or particularly long wiring distances.
High-Speed Operation
NOTICE: Problems may occur with the motor bearings and dynamic balance of the machine when operating a motor beyond its rated speed. Contact the motor or machine manufacturer.

## Torque Characteristics

Torque characteristics differ compared to operating the motor directly from line power. The user should have a full understanding of the load torque characteristics for the application.

## Vibration and Shock

The drive allows selection of high carrier PWM control and low carrier PWM. Selecting high carrier PWM can help reduce motor oscillation.

- Take particular caution when adding a variable speed drive to an application running a motor from line power at a constant speed. If resonance occurs, install shock-absorbing rubber around the base of the motor and enable the Jump frequency selection to prevent continuous operation in the resonant frequency range.
- Mechanical resonance can occur with long motor shafts and in applications such as turbines, blowers, and fans with high inertia loads. Use Closed Loop Vector Control when these applications experience mechanical resonance problems.

## Audible Noise

Noise created during run varies by the carrier frequency setting. When using a high carrier frequency, audible noise from the motor is comparable to the motor noise generated when running from line power. Operating above the rated motor speed can create unpleasant motor noise.

## Synchronous Motors

- Contact Yaskawa or a Yaskawa agent when planning to use a synchronous motor not endorsed by Yaskawa.
- Use a standard induction motor when running multiple synchronous motors simultaneously. A single drive does not have this capability.
- A synchronous motor may rotate slightly in the opposite direction of the Run command at start depending on parameter settings and rotor position.
- The amount of generated starting torque differs depending on the control mode and motor type. Set up the motor with the drive after verifying the starting torque, allowable load characteristics, impact load tolerance, and speed control range.
Contact Yaskawa or a Yaskawa agent when planning to use a motor that does not fall within these specifications:
- In Open Loop Vector Control for PM motors, braking torque is less than $125 \%$ when running between $20 \%$ and $100 \%$ speed, even with a braking resistor. Braking torque drops to less than $50 \%$ when running at less than $20 \%$ speed.
- In Open Loop Vector Control for PM motors, the allowable load inertia moment is approximately 50 times higher than the motor inertia moment.
Contact Yaskawa or a Yaskawa agent for questions concerning applications with a larger inertia moment.
- When using a holding brake in Open Loop Vector Control for PM motors, release the brake prior to starting the motor. Failure to set the proper timing can cause speed loss.
- To restart a coasting motor rotating over 200 Hz while in V/f Control, first use the Short Circuit Braking function to bring the motor to a stop. Short Circuit Braking requires a special braking resistor. Contact Yaskawa or a Yaskawa agent for details.
- To restart a coasting motor rotating below 200 Hz , use the Speed Search function if the motor cable is not too long. If the motor cable is relatively long, stop the motor using Short Circuit Braking.

## - Specialized Motors

## Multi-Pole Motor

The rated current of a multi-pole motor differs from that of a standard motor, so be sure to check the maximum current when selecting a drive. Always stop the motor before switching between the number of motor poles. The motor will coast to stop if a regen overvoltage (ov) fault occurs or if overcurrent (oC) protection is triggered.

## Submersible Motor

The rated current of a submersible motor is greater than that of a standard motor, so select the drive capacity accordingly. Use a motor cable large enough to avoid decreasing the maximum torque level from voltage drop caused by a long motor cable.

## Explosion-Proof Motor

The motor and the drive must be tested together to be certified as explosion-proof. The drive is not designed for explosionproof areas.
When attaching an encoder to an explosion-proof motor, make sure the encoder is also explosion-proof. Use an insulating signal converter to connect the encoder signal lines to the speed feedback option card.

## Geared Motor

Make sure that the gear and the lubricant are rated for the desired speed range to avoid gear damage when operating at low speeds or very high speeds. Consult with the manufacturer for applications that require operation outside the rated speed range of the motor or gear box.

## Single-Phase Motor

Variable speed drives are not designed to operate with single phase motors. Using capacitors to start the motor causes excessive current to flow and can damage drive components. A split-phase start or a repulsion start can burn out the starter coils because the internal centrifugal switch is not activated. The drive is for use with three-phase motors only.

## Motor with Brake

Take caution when using the drive to operate a motor with a built-in holding brake. If the brake is connected to the output side of the drive, it may not release at start due to low voltage levels, so be sure to install a separate power supply for the motor brake. Note that motors with built-in brakes tend to generate a fair amount of noise when running at low speeds.

## - Notes on Power Transmission Machinery

Installing an AC drive in machinery that was previously connected directly to the power supply will allow the machine to operate at variable speeds. Continuous operation outside of the rated speeds can wear on lubrication material in gear boxes and other power transmission parts. Make sure that lubrication is sufficient within the entire speed range to avoid machine damage. Note that operation above the rated speed can increase the noise generated by the machine.

## Drive Label Warning Example

Always heed the warning information listed in Figure i.3 in the position shown in Figure i.4.

## $\triangle$ WARNING

Risk of electric shock.

- Read manual before installing.
- Wait 5 minutes for capacitor discharge after disconnecting power supply.
- To conform to ( $\in$ requirements, make sure to ground the supply neutral for 400 V class.
- After opening the manual switch between the drive and motor, please wait 5 minutes before' inspecting, performing maintenance or wiring the drive. Hot surfaces
- Top and Side surfaces may become hot. Do not touch.

Figure i. 3 Warning Information Example

Figure i. 4 Warning Information Position

## Warranty Information

## - Restrictions

The drive is not designed or manufactured for use in devices or systems that may directly affect or threaten human lives or health.
Customers who intend to use the product described in this manual for devices or systems relating to transportation, health care, space aviation, atomic power, electric power, or in underwater applications must first contact their Yaskawa representatives or the nearest Yaskawa sales office.
WARNING! Injury to Personnel. This product has been manufactured under strict quality-control guidelines. However, if this product is to be installed in any location where failure of this product could involve or result in a life-and-death situation or loss of human life or in a facility where failure may cause a serious accident or physical injury, safety devices must be installed to minimize the likelihood of any accident.

## Receiving

This chapter explains how to inspect the drive upon receipt, and gives an overview of the different enclosure types and components.
1.1 MODEL NUMBER AND NAMEPLATE CHECK ..... 22

### 1.1 Model Number and Nameplate Check

Please perform the following tasks after receiving the drive:

- Inspect the drive for damage.

If the drive appears damaged upon receipt, contact the shipper immediately.

- Verify receipt of the correct model by checking the information on the nameplate.
- If you have received the wrong model or the drive does not function properly, contact your supplier.

## Nameplate

Figure 1.1 Nameplate Information Example
<1> Drive models CIMR-AD4A0930 and 4A1200 use software version 301ロ. The availability of certain functions on these models differs from other 200 V and 400 V class models, which use software version 101口. Refer to Parameter List on page 187 for details.

$<1>$ Drives with these specifications do not guarantee complete protection for the environmental conditions indicated.

## Three-Phase 200 V

| Normal Duty |  |  |

## Mechanical Installation

This chapter explains how to properly mount and install the drive.
2.1 MECHANICAL INSTALLATION........................................................................ 28

### 2.1 Mechanical Installation

This section outlines specifications, procedures, and the environment for proper mechanical installation of the drive.

## Installation Environment

Install the drive in an environment matching the specifications below to help prolong the optimum performance life of the drive.

Table 2.1 Installation Environment

| Environment | Conditions |
| :---: | :---: |
| Installation Area | Indoors |
| Ambient Temperature | $-10^{\circ} \mathrm{C}$ to $+40^{\circ} \mathrm{C}$ (IP20/NEMA Type 1 enclosure) <br> $-10^{\circ} \mathrm{C}$ to $+50^{\circ} \mathrm{C}$ (IP00/Open Type enclosure) <br> Drive reliability improves in environments without wide temperature fluctuations. <br> When using the drive in an enclosure panel, install a cooling fan or air conditioner in the area to ensure that the air temperature inside the enclosure does not exceed the specified levels. <br> Do not allow ice to develop on the drive. |
| Humidity | $95 \% \mathrm{RH}$ or less and free of condensation |
| Storage Temperature | -20 to $+60^{\circ} \mathrm{C}$ |
| Surrounding Area | Install the drive in an area free from: <br> - oil mist and dust <br> - metal shavings, oil, water, or other foreign materials <br> - radioactive materials <br> - combustible materials (e.g., wood) <br> - harmful gases and liquids <br> - excessive vibration <br> - chlorides <br> - direct sunlight. |
| Altitude | 1000 m or lower, up to 3000 m with derating |
| Vibration | 10 to 20 Hz at $9.8 \mathrm{~m} / \mathrm{s}^{2}<1>$ <br> 20 to 55 Hz at $5.9 \mathrm{~m} / \mathrm{s}^{2}$ (Models CIMR-A口2A0004 to 2A0211, 4A0002 to 4A0165, and 5A0003 to 5A0099) or $2.0 \mathrm{~m} / \mathrm{s}^{2}$ (Models CIMR-A口2A0250 to 2A0415, 4A0208 to 4A1200, and 5A0125 to 5A0242) |
| Orientation | Install the drive vertically to maintain maximum cooling effects. |

$<1>$ Models CIMR-AD4A0930 and 4A1200 are rated at $5.9 \mathrm{~m} / \mathrm{s}^{2}$
NOTICE: Avoid placing drive peripheral devices, transformers, or other electronics near the drive as the noise created can lead to erroneous operation. If such devices must be used in close proximity to the drive, take proper steps to shield the drive from noise.

NOTICE: Prevent foreign matter such as metal shavings and wire clippings from falling into the drive during installation. Failure to comply could result in damage to the drive. Place a temporary cover over the top of the drive during installation. Remove the temporary cover before drive start-up, as the cover will reduce ventilation and cause the drive to overheat.

## Installation Orientation and Spacing

Install the drive upright as illustrated in Figure 2.1 to maintain proper cooling.

Figure 2.1 Correct Installation Orientation

## Single Drive Installation

Figure 2.2 shows the installation distance required to maintain sufficient space for airflow and wiring. Install the heatsink against a closed surface to avoid diverting cooling air around the heatsink.

Figure 2.2 Correct Installation Spacing
Note: IP20/NEMA Type 1 enclosure and IP00/Open Type enclosure models require the same amount of space above and below the drive for installation.

## Multiple Drive Installation (Side-by-Side Installation)

Models CIMR-A口2A0004 to 2A0081, 4A0002 to 4A0044, and 5A0003 to 5A0032 can take advantage of Side-by-Side installation.
When installing multiple drives into the same enclosure panel, mount the drives according to Figure 2.2.
When mounting drives with the minimum clearance of 2 mm according to Figure 2.3, set parameter L8-35 to 1 while considering derating. Refer to Parameter List on page 187.

## A-50 mm minimum <br> B- $\mathbf{3 0} \mathbf{~ m m}$ minimum

Figure 2.3 Space Between Drives (Side-by-Side Mounting)
Note: Align the tops of the drives when installing drives of different heights in the same enclosure panel. Leave space between the tops and bottoms of stacked drives for easier cooling fan replacement.

Remove the top protective covers of all drives as shown in Figure 2.4 when mounting IP20/NEMA Type 1 enclosure drives side-by-side. Refer to Top Protective Cover on page 52 to remove and reattach the top protective cover.

Figure 2.4 IP20/NEMA 1 Side-by-Side Mounting in Enclosure

## Precautions and Instructions for Installation of Models CIMR-A口4A0930 and 4A1200

Read the following precautions and instructions before installing models CIMR-AD4A0930 and 4A1200.
WARNING! Crush Hazard. Observe the following instructions and precautions. Failure to comply could result in serious injury or death from falling equipment.

## Vertical Suspension Procedure

WARNING! Crush Hazard. Use an adequate length of wire to ensure a $50^{\circ}$ or wider suspension angle as illustrated in Figure 2.6. The maximum allowable load of the eye bolts cannot be guaranteed when the drive is suspended with the wires at angles less than $50^{\circ}$. Failure to comply may result in serious injury or death from falling equipment.
Use the following procedure to lift the drive with a crane:

1. Remove the four eye bolts from the drive side panels and fix them securely on the top panel (Refer to Figure 2.5).
2. Pass wire through the holes of all four eye bolts (Refer to Figure 2.6).
3. Gradually take up the slack in the wires and hoist the drive after the wires are stretched tight.
4. Lower the drive when ready to install in the enclosure panel. Stop lowering the drive when it is near the floor then begin lowering the drive again very slowly until the drive is placed correctly.

Figure 2.5 Eye Bolt Repositioning

Figure 2.6 Suspension Wire Angle Example

## IP20/NEMA Type 1 Enclosure Drives

Note: Removing the top protective cover or bottom conduit bracket from an IP20/NEMA Type 1 enclosure drive voids NEMA Type 1 protection while maintaining IP20 conformity.

Figure 1

3.8 CONTROL I/O CONNECTIONS ..... 69
3.9 CONNECT TO A PC ..... 73
3.10 WIRING CHECKLIST ..... 74

### 3.1 Standard Connection Diagram

### 3.1 Standard Connection Diagram

Connect the drive and peripheral devices as shown in Figure 3.1. It is possible to set and run the drive via the digital operator without connecting digital I/O wiring. This section does not discuss drive operation; Refer to Start-Up Programming \& Operation on page 77 for instructions on operating the drive.
NOTICE: Inadequate wiring could result in damage to the drive. Install adequate branch circuit short circuit protection per applicable codes. The drive is suitable for circuits capable of delivering not more than 100,000 RMS symmetrical amperes, 240 Vac maximum (200 V class), 480 Vac maximum (400 V class), 600 Vac maximum ( 600 V class).

NOTICE: When the input voltage is 440 V or higher or the wiring distance is greater than 100 meters, pay special attention to the motor insulation voltage or use a drive duty motor. Failure to comply could lead to motor insulation breakdown.

NOTICE: Do not connect AC control circuit ground to drive enclosure. Improper drive grounding can cause control circuit malfunction.
Note: The minimum load for the relay outputs M1-M2, M3-M4, M5-M6, and MA-MB-MC is 10 mA .

Figure 3.1 Drive Standard Connection Diagram (example: CIMR-AD2A0040)
<1> Remove the jumper when installing a DC link choke. Models CIMR-AD2A0110 to 2A0415 and 4A0058 to 4A1200 come with a built-in DC link choke.
<2> Set up a thermal relay sequence to disconnect drive main power in the event of an overheat condition on the dynamic braking option.
<3> Set L8-55 to 0 to disable the protection function of the built-in braking transistor of the drive when using an optional regenerative converter or dynamic braking option. Leaving L8-55 enabled may cause a braking resistor fault (rF). Additionally, disable Stall Prevention (L3-04 = 0) when using an optional regenerative converter, regenerative or braking units, or dynamic braking option. Leaving If L3-04 enabled may prevent the drive from stopping within the specified deceleration time.
<4> Supplying power to the control circuit separately from the main circuit requires 24 V power supply (option).
<5> This figure illustrates an example of a sequence input to S1 through S8 using a non-powered relay or an NPN transistor. Install the wire link between terminals SC-SP for Sink mode, between SC-SN for Source mode, or leave the link out for external power supply. Never short terminals SP and SN, as it will damage the drive.
<6> This voltage source supplies a maximum current of 150 mA when not using a digital input card DI-A3.
$<7>$ The maximum output current capacity for the +V and -V terminals on the control circuit is 20 mA . Never short terminals $+\mathrm{V},-\mathrm{V}$, and $A C$, as it can cause erroneous operation or damage the drive.
<8> Set DIP switch S1 to select between a voltage or current input signal to terminal A2. The default setting is for current input.
<9> Set DIP switch S4 to select between analog or PTC input for terminal A3.
<10> Set DIP switch S2 to the ON position to enable the termination resistor in the last drive in a MEMOBUS/Modbus network.
<11> Use jumper S3 to select between Sink mode, Source mode, and external power supply for the Safe Disable inputs.
NOTE: Terminals $\mathrm{H} 1, \mathrm{H} 2, \mathrm{DM}+$, and DM - on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.
<12> Disconnect the wire jumper between $\mathrm{H} 1-\mathrm{HC}$ and $\mathrm{H} 2-\mathrm{HC}$ when utilizing the Safe Disable input. NOTE: Terminals $\mathrm{H} 1, \mathrm{H} 2, \mathrm{DM}+$, and $\mathrm{DM}-$ on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.
<13> Monitor outputs work with devices such as analog frequency meters, ammeters, voltmeters, and wattmeters. They are not intended for use as a feedback-type signal.
$<14>$ Use jumper S5 to select between voltage or current output signals at terminals AM and FM. Set parameters H4-07 and H4-08 accordingly.
<15> Self-cooling motors do not require the same wiring necessary for motors with cooling fans.
WARNING! Sudden Movement Hazard. Do not close the wiring for the control circuit unless the multifunction input terminal parameters are properly set. Improper sequencing of run/stop circuitry could result in death or serious injury from moving equipment.

WARNING! Sudden Movement Hazard. Ensure start/stop and safety circuits are wired properly and in the correct state before energizing the drive. Failure to comply could result in death or serious injury from moving equipment. When programmed for 3-Wire control, a momentary closure on terminal S1 may cause the drive to start.

WARNING! Sudden Movement Hazard. When using a 3-Wire sequence, set the drive to 3-Wire sequence prior to wiring the control terminals and set parameter b1-17 to 0 so the drive will not accept a Run command at power up (default). If the drive is wired for a 3 -Wire sequence but set up for a 2-Wire sequence (default), and parameter b1-17 is set to 1 so the drive accepts a Run command at power up, the motor will rotate in reverse direction at drive power up and may cause injury.

WARNING! Sudden Movement Hazard. Confirm the drive I/O signals and external sequence before executing the application preset function. Executing the application preset function or setting A1-06 $=0$ will change the drive I/O terminal functions and may cause unexpected equipment operation. Failure to comply may cause death or serious injury.
NOTICE: When using the automatic fault restart function with wiring designed to shut off the power supply upon drive fault, make sure the drive does not trigger a fault output during fault restart ( $L 5-02=0$, default). Failure to comply will prevent the automatic fault restart function from working properly.

### 3.2 Main Circuit Connection Diagram

Refer to diagrams in this section when wiring the main circuit of the drive. Connections may vary based on drive capacity. The DC power supply for the main circuit also provides power to the control circuit.
NOTICE: Do not use the negative DC bus terminal "-" as a ground terminal. This terminal is at high DC voltage potential. Improper wiring connections could damage the drive.

## Three-Phase 200 V Class (CIMR-AD2A0004 to 2A0081) <br> Three-Phase 400 V Class (CIMR-AD4A0002 to 4A0044) <br> Three-Phase 600 V Class (CIMR-AD5A0003 to 5A0032)

Figure 3．5 Connecting Main Circuit Terminals

## Three-Phase 400 V Class (CIMR-AD4A0930, 4A1200)

Figure 3.6 Connecting Main Circuit Terminals
Note: Models CIMR-AD4A0930 and 4A1200 are compatible for operation with 12-phase rectification. Refer to 12-Phase Rectification on page 45 for details.

## 12-Phase Rectification

## Removing the Jumper

Models CIMR-A口4A0930 and 4A1200 are compatible for operation with 12-phase rectification. Operation with 12-phase rectification requires the user to separately prepare a 3-winding transformer for the power supply. Contact Yaskawa or your nearest sales representative for transformer specifications.
WARNING! Fire Hazard. Failure to remove jumpers shorting the power supply terminals on the main circuit when operating with 12-phase rectification may cause death or serious injury by fire.

## Application Notes

Models CIMR-A $\square 4 \mathrm{~A} 0930$ and 4A1200 are shipped from the factory with jumpers short-circuiting terminals R/L1-R1/L11, S/L2-S1/L21, and T/L3-T1/L31.
Remove M5 screws and jumpers as shown in Figure 3.7 to operate with 12-phase rectification.

Figure 3.7 Removing the Jumper

## Connection Diagram

Figure 3.8 Connecting Main Circuit Terminals

### 3.3 Terminal Cover

Follow the procedure below to remove the terminal cover for wiring and to reattach the terminal cover after wiring is complete.
CIMR-AD2A0004 to 2A0081, 4A0002 to 4A0044, 5A0003 to 5A0032 (IP20/NEMA Type 1 Enclosure)

## Removing the Terminal Cover

1. Loosen the terminal cover screw using a \# 2 Phillips screwdriver. Screw sizes vary by drive model.

Figure 3.9 Removing the Terminal Cover on an IP20/NEMA Type 1 Enclosure Drive
2. Push in on the tab located on the bottom of the terminal cover and gently pull forward to remove the terminal cover.

Figure 3.10 Removing the Terminal Cover on an IP20/NEMA Type 1 Enclosure Drive

## Reattaching the Terminal Cover

Power lines and signal wiring should pass through the opening provided. Refer to Wiring the Main Circuit Terminal on page 63 and Wiring the Control Circuit Terminal on page 67 for details on wiring.
Reattach the terminal cover after completing the wiring to the drive and other devices.

Figure 3.11 Reattaching the Terminal Cover on an IP20/NEMA Type 1 Enclosure Drive

## CIMR-AD2A0110 to 2A0250, 4A0208 to 4A1200, and 5A0125 to 5A0242 (IP00/Open Type Enclosure)

## - Removing the Terminal Cover

1. Loosen the screws on the terminal cover, then pull down on the cover.

Note: The terminal cover and the number of terminal cover screws differ depending on the drive model.
CAUTION! Do not completely remove the cover screws, just loosen them. If the cover screws are removed completely, the terminal cover may fall off causing an injury.

Figure 3.12 Removing the Terminal Cover on an IP00/Open Type Enclosure Drive
2. Pull forward on the terminal cover to free it from the drive.

Figure 3.13 Removing the Terminal Cover on an IP00/Open Type Enclosure Drive

## Reattaching the Terminal Cover

After wiring the terminal board and other devices, double-check connections and reattach the terminal cover. Refer to Wiring the Main Circuit Terminal on page 63 and Wiring the Control Circuit Terminal on page 67 for details on wiring.

Figure 3.14 Reattaching the Terminal Cover on an IP00/Open Type Enclosure Drive
$<1>$ Connect the ground wiring first, then the main circuit wiring, and finally the control circuit wiring.

### 3.4 Digital Operator and Front Cover

Detach the digital operator from the drive for remote operation or when opening the front cover to install an option card.
NOTICE: Be sure to remove the digital operator prior to opening or reattaching the front cover. Leaving the digital operator plugged into the drive when removing the front cover can result in erroneous operation caused by a poor connection. Firmly fasten the front cover back into place before reattaching the digital operator.

## - Removing/Reattaching the Digital Operator

## Removing the Digital Operator

While pressing on the tab located on the right side of the digital operator, pull the digital operator forward to remove it from the drive.

Figure 3.15 Removing the Digital Operator

## Reattaching the Digital Operator

Insert the digital operator into the opening in the top cover while aligning it with the notches on the left side of the opening. Next, press gently on the right side of the operator until it clicks into place.

Figure 3.16 Reattaching the Digital Operator

## Removing/Reattaching the Front Cover

## Removing the Front Cover

## Drive Models CIMR-AD2A0004 to 2A0081, 4A0002 to 4A0044, and 5A0003 to 5A0032

After removing the terminal cover and the digital operator, loosen the screw that affixes the front cover (models CIMR-A $\square 2 \mathrm{~A} 0056,4 \mathrm{~A} 0038,5 \mathrm{~A} 0022$, and 5A0027 do not use a screw to affix the front cover). Pinch in on the tabs found on each side of the front cover, then pull forward to remove it from the drive.

Figure 3.17 Remove the Front Cover (2A0004 to 2A0081, 4A0002 to 4A0044, and 5A0003 to 5A0032)
Drive Models CIMR-A $\square 2 A 0110$ to 2A0415 and 4A0058 to 4A1200

1. Remove the terminal cover and the digital operator.
2. Loosen the installation screw on the front cover.
3. Use a straight-edge screwdriver to loosen the hooks on each side of the cover that hold it in place.

Figure 3.18 Remove the Front Cover (2A0010 to 2A0415 and 4A0058 to 4A1200)
4. Unhook the left side of the front cover then swing the left side towards you as shown in Figure 3.19 until the cover comes off.

Figure 3.19 Remove the Front Cover (2A0010 to 2A0415 and 4A0058 to 4A1200)

## Reattaching the Front Cover

Drive Models CIMR-A $\square 2 A 0004$ to 2A0081, 4A0002 to 4A0044, and 5A0003 to 5A0032
Reverse the instructions given in Remove the Front Cover (2A0004 to 2A0081, 4A0002 to 4A0044, and 5A0003 to 5A0032) on page 49 to reattach the front cover. Pinch inwards on the hooks found on each side of the front cover while guiding it back into the drive. Make sure it clicks firmly into place.

## Drive Models CIMR-A■2A0110 to 2A0415 and 4A0058 to 4A1200

1. Slide the front cover so the hooks on the top connect to the drive.

Figure 3.20 Reattach the Front Cover (2A0110 to 2A0415 and 4A0058 to 4A1200)
2. After connecting the hooks to the drive, press firmly on the cover to lock it into place.

### 3.5 Top Protective Cover

Drive models CIMR-AD2A0004 to 2A0081, 4A0002 to 4A0058, and 5A0003 to 5A0032 are designed to IP20/NEMA Type 1 specifications with a protective cover on the top. Removing this top protective cover or the bottom conduit bracket from an IP20/NEMA Type 1 enclosure drive voids the NEMA Type 1 protection while maintaining IP20 conformity.

## Removing the Top Protective Cover

Insert the tip of a straight-edge screwdriver into the small opening located on the front edge of the top protective cover. Gently apply pressure as shown in the figure below to free the cover from the drive.

Note: Removing the top protective cover or the bottom conduit bracket from an IP20/NEMA Type 1 enclosure drive voids the NEMA Type 1 protection while maintaining IP20 conformity.

Figure 3.21 Removing the Top Protective Cover

## Reattaching the Top Protective Cover

Insert the two small protruding hooks on the rear side of the top protective cover into the provided mounting holes near the back of the drive, then press down on the front side of the top protective cover to fasten the cover into place.

Figure 3.22 Reattaching the Protective Cover

### 3.6 Main Circuit Wiring

This section describes the functions, specifications, and procedures required to safely and properly wire the main circuit in the drive.
NOTICE: Do not solder the ends of wire connections to the drive. Soldered wiring connections can loosen over time. Improper wiring practices could result in drive malfunction due to loose terminal connections.
NOTICE: Do not switch the drive input to start or stop the motor. Frequently switching the drive on and off shortens the life of the DC bus charge circuit and the DC bus capacitors, and can cause premature drive failures. For the full performance life, refrain from switching the drive on and off more than once every 30 minutes.

## Main Circuit Terminal Functions

Table 3.1 Main Circuit Terminal Functions

| Terminal |  | Type |  |  |  | Function | Page |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & 200 \text { V } \\ & \text { Class } \end{aligned}$ | Drive Model CIMR-A | $\begin{aligned} & \text { 2A0004 to } \\ & \text { 2A0081 } \end{aligned}$ | $\begin{aligned} & \text { 2A0110 to } \\ & \text { 2A0138 } \end{aligned}$ | $\begin{aligned} & \text { 2A0169 to } \\ & \text { 2A0415 } \end{aligned}$ | - |  |  |
| $\begin{aligned} & 400 \mathrm{~V} \\ & \text { Class } \end{aligned}$ |  | $\begin{aligned} & \text { 4A0002 to } \\ & \text { 4A0044 } \end{aligned}$ | $\begin{aligned} & \text { 4A0058 to } \\ & \text { 4A0072 } \end{aligned}$ | $\begin{aligned} & \text { 4A0088 to } \\ & \text { 4A0675 } \end{aligned}$ | $\begin{aligned} & \text { 4A0930 to } \\ & \text { 4A1200 } \end{aligned}$ |  |  |
| $\begin{aligned} & \hline 600 \mathrm{~V} \\ & \text { Class } \end{aligned}$ |  | $\begin{aligned} & \text { 5A0003 to } \\ & \text { 5A0032 } \end{aligned}$ | $\begin{aligned} & \text { 5A0041 to } \\ & \text { 5A0052 } \end{aligned}$ | $\begin{aligned} & \text { 5A0062 to } \\ & \text { 5A0242 } \end{aligned}$ | - |  |  |

- Protecting Main Circuit Terminals

## - Insulation Caps or Sleeves

Use insulation caps or sleeves when wiring the drive with crimp terminals. Take particular care to ensure that the wiring does not touch nearby terminals or the surrounding case.

## ■ Insulation Barrier

Insulation barriers are packaged with drive models CIMR-AD4A0414 through 4A1200 to provide added protection between terminals. Yaskawa recommends using the provided insulation barriers to ensure proper wiring. Refer to Figure 3.23 for instructions on placement of the insulation barriers.

Figure 3.23 Installing Insulation Barriers

## Wire Gauges and Tightening Torque

Use the tables in this section to select the appropriate wires and crimp terminals.
Gauges listed in the tables are for use in the United States.
Note: 1. Wire gauge recommendations based on drive continuous current ratings (ND) using $75^{\circ} \mathrm{C} 600$ Vac vinyl-sheathed wire assuming ambient temperature within $40^{\circ} \mathrm{C}$ and wiring distance less than 100 m .
2. Terminals $+1,+2,+3,-, B 1$ and B2 are for connecting optional devices such as a DC link choke or braking resistor. Do not connect other nonspecific devices to these terminals.

- Consider the amount of voltage drop when selecting wire gauges. Increase the wire gauge when the voltage drop is greater than $2 \%$ of motor rated voltage. Ensure the wire gauge is suitable for the terminal block. Use the following formula to calculate the amount of voltage drop:
Line drop voltage $(\mathrm{V})=\sqrt{ } 3 \times$ wire resistance $(\Omega / \mathrm{km}) \times$ wire length $(\mathrm{m}) \times$ current $(\mathrm{A}) \times 10^{-3}$
- Refer to instruction manual TOBP C720600 00 for braking transistor option or braking resistor option wire gauges.
- Use terminal +1 and the negative terminal when connecting a braking transistor option, regenerative converter, or a regen unit.

NOTICE: Do not connect a braking resistor to terminals +1 or - Failure to comply may cause damage to the drive circuitry.

- Refer to UL Standards Compliance on page 258 for information on UL compliance.

Yaskawa recommends using closed-loop crimp terminals on all drive models. UL/cUL approval requires the use of closedloop crimp terminals when wiring the drive main circuit terminals on models CIMR-AD2A0110 to 2A0415 and 4A0058 to 4A1200. Use only the tools recommended by the terminal manufacturer for crimping. Refer to Closed-Loop Crimp Terminal Size on page 258 for closed-loop crimp terminal recommendations.
The wire gauges listed in the following tables are Yaskawa recommendations. Refer to local codes for proper wire gauge selections.

## ■ Three-Phase 200 V Class

Table 3.2 Wire Gauge and Torque Specifications (Three-Phase 200 V Class)

| Model CIMR-AD | Terminal | Recomm. Gauge AWG, kcmil | Wire Range AWG, kcmil | Screw Size | Tightening Torque N•m (Ib.in.) |

$<1>$ Drive models CIMR-AD4A0058 to 4A1200 require the use of closed-loop crimp terminals for UL/cUL compliance. Use only the tools recommended by the terminal manufacturer for crimping.
$<2>$ When installing an EMC filter, additional measures must be taken to comply with IEC61800-5-1. Refer to EMC Filter Installation on page 252 for details.

## Main Circuit Terminal and Motor Wiring

This section outlines the various steps, precautions, and checkpoints for wiring the main circuit terminals and motor terminals.
WARNING! Electrical Shock Hazard. Do not connect the AC power line to the output terminals of the drive. Failure to comply could result in death or serious injury by fire as a result of drive damage from line voltage application to output terminals.

NOTICE: When connecting the motor to the drive output terminals U/T1, V/T2, and W/T3, the phase order for the drive and motor should match. Failure to comply with proper wiring practices may cause the motor to run in reverse if the phase order is backward.

NOTICE: Do not connect phase-advancing capacitors or LC/RC noise filters to the output circuits. Failure to comply could result in damage to the drive, phase-advancing capacitors, LC/RC noise filters or ground fault circuit interrupters.

## Cable Length Between Drive and Motor

Voltage drop along the motor cable may cause reduced motor torque when the wiring between the drive and the motor is too long, especially at low frequency output. This can also be a problem when motors are connected in parallel with a fairly long motor cable. Drive output current will increase as the leakage current from the cable increases. An increase in leakage current may trigger an overcurrent situation and weaken the accuracy of the current detection.
Adjust the drive carrier frequency according to Table 3.5. If the motor wiring distance exceeds 100 m because of the system configuration, reduce the ground currents. Refer to C6-02: Carrier Frequency Selection on page 101.

Table 3.5 Cable Length Between Drive and Motor

| Cable Length | $\mathbf{5 0} \mathbf{~ m}$ or less | $\mathbf{1 0 0} \mathbf{~ m}$ or less | Greater than $\mathbf{1 0 0} \mathbf{~ m}$ |
| :---: | :---: | :---: | :---: |
| Carrier Frequency | 15 kHz or less | 5 kHz or less | 2 kHz or less |

Note: 1. When setting carrier frequency for drives running multiple motors, calculate cable length as the total wiring distance to all connected motors.
2. The maximum cable length when using $\operatorname{OLV} / \mathrm{PM}(\mathrm{A} 1-02=5)$ or $\mathrm{AOLV} / \mathrm{PM}(\mathrm{A} 1-02=6)$ is 100 m .

## Ground Wiring

Follow the precautions below when wiring the ground for one drive or a series of drives.
WARNING! Electrical Shock Hazard. Make sure the protective earthing conductor complies with technical standards and local safety regulations. Because the leakage current exceeds 3.5 mA in models CIMR-AD4A0414 and larger, IEC 61800-5-1 states that either the power supply must be automatically disconnected in case of discontinuity of the protective earthing conductor or a protective earthing conductor with a cross-section of at least $10 \mathrm{~mm}^{2}(\mathrm{Cu})$ or $16 \mathrm{~mm}^{2}$ (Al) must be used. Failure to comply may result in death or serious injury.

WARNING! Electrical Shock Hazard. Always use a ground wire that complies with technical standards on electrical equipment and minimize the length of the ground wire. Improper equipment grounding may cause dangerous electrical potentials on equipment chassis, which could result in death or serious injury.
WARNING! Electrical Shock Hazard. Be sure to ground the drive ground terminal ( 200 V class: ground to $100 \Omega$ or less; 400 V class: ground to $10 \Omega$ or less; 600 V class: ground to $10 \Omega$ or less). Improper equipment grounding could result in death or serious injury by contacting ungrounded electrical equipment.

NOTICE: Do not share the ground wire with other devices such as welding machines or large-current electrical equipment. Improper equipment grounding could result in drive or equipment malfunction due to electrical interference.

NOTICE: When using more than one drive, ground multiple drives according to instructions. Improper equipment grounding could result in abnormal operation of drive or equipment.
Refer to Figure 3.24 when using multiple drives. Do not loop the ground wire.

Figure 3.24 Multiple Drive Wiring

## Wiring the Main Circuit Terminal

WARNING! Electrical Shock Hazard. Shut off the power supply to the drive before wiring the main circuit terminals. Failure to comply may result in death or serious injury.
Wire the main circuit terminals after the terminal board has been properly grounded.
Models CIMR-AD2A0004 to 2A0081, 4A0002 to 4A0044, and 5A0003 to 5A0032 have a cover placed over the DC bus and braking circuit terminals prior to shipment to help prevent miswiring. Use wire cutters to cut away covers as needed for terminals.

A - Braking circuit protective cover
$B$ - DC bus protective cover
Figure 3.25 Protecting Cover to Prevent Miswiring (CIMR-AD5A0011)

## Main Circuit Connection Diagram

Refer to Main Circuit Connection Diagram on page 43 when wiring terminals on the main power circuit of the drive.
WARNING! Fire Hazard. The braking resistor connection terminals are B1 and B2. Do not connect braking resistors to any other terminals. Improper wiring connections could cause the braking resistor to overheat and cause death or serious injury by fire. Failure to comply may result in damage to the braking circuit or drive.

### 3.7 Control Circuit Wiring

## Control Circuit Terminal Block Functions

Drive parameters determine which functions apply to the multi-function digital inputs (S1 to S8), multi-function digital outputs (M1 to M6), multi-function analog inputs (A1 to A3), and multi-function analog monitor output (FM, AM). The default setting is listed next to each terminal in Figure 3.1 on page 41.
WARNING! Sudden Movement Hazard. Always check the operation and wiring of control circuits after being wired. Operating a drive with untested control circuits could result in death or serious injury.

WARNING! Sudden Movement Hazard. Confirm the drive I/O signals and external sequence before starting test run. Setting parameter A1-06 may change the I/O terminal function automatically from the factory setting. Refer to Application Selection on page 91. Failure to comply may result in death or serious injury.

## Input Terminals

Table 3.6 lists the input terminals on the drive. Text in parenthesis indicates the default setting for each multi-function input.
Table 3.6 Control Circuit Input Terminals

| Type | No. | Terminal Name (Function) | Function (Signal Level) Default Setting | Page |
| :---: | :---: | :---: | :---: | :---: |
| Multi-Function Digital Inputs | S1 | Multi-function input 1 (Closed: Forward run, Open: Stop) | - Photocoupler <br> - $24 \mathrm{Vdc}, 8 \mathrm{~mA}$ <br> - Set the S3 jumper to select between sinking, sourcing mode, and the power supply. Refer to Sinking/Sourcing Mode Switch for Digital Inputs on page 69. | 217 |
|  | S2 | Multi-function input 2 <br> (Closed: Reverse run, Open: Stop) |  |  |
|  | S3 | Multi-function input 3 (External fault, N.O.) |  |  |
|  | S4 | Multi-function input 4 (Fault reset) |  |  |
|  | S5 | Multi-function input 5 (Multi-step speed reference 1) |  |  |
|  | S6 | Multi-function input 6 (Multi-step speed reference 2) |  |  |
|  | S7 | Multi-function input 7 (Jog reference) |  |  |
|  | S8 | Multi-function input 8 (External baseblock) |  |  |
|  | SC | Multi-function input common | Multi-function input common |  |
|  | SP | Digital input power supply +24 Vdc | 24 Vdc power supply for digital inputs, 150 mA max (only when not using digital input option DI-A3) <br> NOTICE: Do not jumper or short terminals SP and SN. Failure to comply will damage the drive. | 69 |
|  | SN | Digital input power supply 0 V |  | 69 |
| Safe Disable Inputs | H1 | Safe Disable input $1^{<1>}$ | - $24 \mathrm{Vdc}, 8 \mathrm{~mA}$ <br> - One or both open: Output disabled <br> - Both closed: Normal operation <br> - Internal impedance: $3.3 \mathrm{k} \Omega$ <br> - Off time of at least 1 ms <br> - Disconnect the wire jumpers shorting terminals $\mathrm{H} 1, \mathrm{H} 2$, and HC to use the Safe Disable inputs. Set the S5 jumper to select between sinking, sourcing mode, and the power supply as explained on page 69. | 264 |
|  | H2 | Safe Disable input $2^{<1>}$ |  |  |
|  | HC | Safe Disable function common | Safe disable function common |  |

| Type | No. | Terminal Name (Function) | Function (Signal Level) Default Setting | Page |
| :---: | :---: | :---: | :---: | :---: |
| Analog Inputs / <br> Pulse Train <br> Input | RP | Multi-function pulse train input (Frequency reference) | - Input frequency range: 0 to 32 kHz <br> - Signal Duty Cycle: 30 to $70 \%$ <br> - High level: 3.5 to 13.2 Vdc , low level: 0.0 to 0.8 Vdc <br> - Input impedance: $3 \mathrm{k} \Omega$ | $\begin{aligned} & 95 \\ & 225 \end{aligned}$ |
|  | +V | Power supply for analog inputs | 10.5 Vdc (max allowable current 20 mA ) | 93 |
|  | -V | Power supply for analog inputs | -10.5 Vdc (max allowable current 20 mA ) | - |
|  | A1 | Multi-function analog input 1 (Frequency reference bias) | -10 to $10 \mathrm{Vdc}, 0$ to 10 Vdc (input impedance: $20 \mathrm{k} \Omega$ ) | $\begin{aligned} & \hline 93 \\ & 112 \end{aligned}$ |
|  | A2 | Multi-function analog input 2 (Frequency reference bias) | - -10 to $10 \mathrm{Vdc}, 0$ to 10 Vdc (input impedance: $20 \mathrm{k} \Omega$ ) <br> - 4 to $20 \mathrm{~mA}, 0$ to 20 mA (input impedance: $250 \Omega$ ) <br> - Voltage or current input must be selected by DIP switch S1 and H3-09. | $\begin{aligned} & 93 \\ & 93 \\ & 114 \end{aligned}$ |
|  | A3 | Multi-function analog input 3 <br> (Auxiliary frequency reference)/PTC Input | - -10 to $10 \mathrm{Vdc}, 0$ to 10 Vdc (input impedance: $20 \mathrm{k} \Omega$ ) <br> - Use DIP switch S4 on the terminal board to select between analog and PTC input. | 93 |
|  | AC | Frequency reference common | 0 V | 93 |
|  | E (G) | Ground for shielded lines and option cards | - | - |

$<1>$ Terminals H1, H2, DM + , and DM- on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.

## Output Terminals

Table 3.7 lists the output terminals on the drive. Text in parenthesis indicates the default setting for each multi-function output.
Table 3.7 Control Circuit Output Terminals

| Type | No. | Terminal Name (Function) | Function (Signal Level) Default Setting | Page |
| :---: | :---: | :---: | :---: | :---: |
| Fault Relay Output | MA | N.O. | $30 \mathrm{Vdc}, 10 \mathrm{~mA}$ to $1 \mathrm{~A} ; 250 \mathrm{Vac}, 10 \mathrm{~mA}$ to 1 A Minimum load: $5 \mathrm{Vdc}, 10 \mathrm{~mA}$ | 110 |
|  | MB | N.C. output |  |  |
|  | MC | Fault output common |  |  |
| Multi-Function Digital Output <1> | M1 | Multi-function digital output (During run) | $30 \mathrm{Vdc}, 10 \mathrm{~mA}$ to $1 \mathrm{~A} ; 250 \mathrm{Vac}, 10 \mathrm{~mA}$ to 1 A Minimum load: $5 \mathrm{Vdc}, 10 \mathrm{~mA}$ | 110 |
|  | M2 |  |  |  |
|  | M3 | Multi-function digital output (Zero speed) |  |  |
|  | M4 |  |  |  |
|  | M5 | Multi-function digital output (Speed Agree 1) |  |  |
|  | M6 |  |  |  |
| Monitor Output | MP | Pulse train output (Output frequency) | 32 kHz (max) | 225 |
|  | FM | Analog monitor output 1 (Output frequency) | -10 to +10 Vdc , or 0 to +10 Vdc | 223 |
|  | AM | Analog monitor output 2 (Output current) |  |  |
|  | AC | Monitor common | 0 V | - |
| Safety Monitor Output ${ }^{<2>}$ | DM + | Safety monitor output | Outputs status of Safe Disable function. Closed when both Safe Disable channels are closed. Up to +48 Vdc 50 mA | 266 |
|  | DM- | Safety monitor output common |  |  |

$<1>$ Refrain from assigning functions to digital relay outputs that involve frequent switching, as doing so may shorten relay performance life. Switching life is estimated at 200,000 times (assumes 1 A , resistive load).
$<2>$ Terminals H1, H2, DM + , and DM- on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.

Connect a suppression diode as shown in Figure 3.26 when driving a reactive load such as a relay coil. Ensure the diode rating is greater than the circuit voltage.

Figure 3.26 Connecting a Suppression Diode

## Serial Communication Terminals

Table 3.8 Control Circuit Terminals: Serial Communications

| Type | No. | Signal Name | Function (Signal Level) |  |
| :---: | :---: | :---: | :---: | :---: |
| MEMOBUS/Modbus Communication ${ }^{<1>}$ | R+ | Communications input (+) | MEMOBUS/Modbus communication: Use an RS-485 or RS-422 cable to connect the drive. | RS-485/422 <br> MEMOBUS/Modbus communication protocol 115.2 kbps (max.) |
|  | R- | Communications input (-) |  |  |
|  | S+ | Communications output (+) |  |  |
|  | S- | Communications output (-) |  |  |
|  | IG | Shield ground | 0 V |  |

$<1>$ Enable the termination resistor in the last drive in a MEMOBUS/Modbus network by setting DIP switch S2 to the ON position. Refer to Control I/O Connections on page 69 for more information on the termination resistor.

## - Terminal Configuration

The control circuit terminals are arranged as shown in Figure 3.27.

Figure 3.27 Control Circuit Terminal Arrangement

## Wire Size and Torque Specifications

Select appropriate wire type and gauges from Table 3.9. For simpler and more reliable wiring, use crimp ferrules on the wire ends. Refer to Table 3.10 for ferrule terminal types and sizes.

Table 3.9 Wire Gauges

| Terminal | Screw Size | Tightening Torque $\mathrm{N} \cdot \mathrm{m}$ (Ib. in) | Bare Wire Terminal |  | Ferrule-Type Terminal |  | Wire Type |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Applicable wire size $\mathrm{mm}^{2}$ (AWG) | Recomm. wire size $\mathbf{m m}^{2}$ (AWG) | $\begin{gathered} \text { Applicable } \\ \text { wire size } \\ \mathrm{mm}^{2} \text { (AWG) } \\ \hline \end{gathered}$ | Recomm. wire size $\mathrm{mm}^{2}$ (AWG) |  |
| S1-S8, SC, SN, SP | M3 | $\begin{gathered} 0.5 \text { to } 0.6 \\ (4.4 \text { to } 5.3) \end{gathered}$ | Stranded wire: 0.2 to 1.0 (24 to 16) Solid wire: 0.2 to 1.5 (24 to 16) | 0.75 (18) | $\begin{aligned} & 0.25 \text { to } 0.5 \\ & \text { (24 to } 20 \text { ) } \end{aligned}$ | 0.5 (20) | Shielded wire, etc. |
| H1, H2, HC |  |  |  |  |  |  |  |
| $\begin{aligned} & \mathrm{RP}, \mathrm{~V}+, \mathrm{V}-, \mathrm{A} 1, \mathrm{~A} 2, \mathrm{~A} 3, \\ & \mathrm{AC} \end{aligned}$ |  |  |  |  |  |  |  |
| MA, MB, MC |  |  |  |  |  |  |  |
| M1-M6 |  |  |  |  |  |  |  |
| MP, FM, AM, AC |  |  |  |  |  |  |  |
| DM + , DM- |  |  |  |  |  |  |  |
| R+, R-, S+, S-, IG |  |  |  |  |  |  |  |

## Ferrule-Type Wire Terminals

Yaskawa recommends using CRIMPFOX 6, a crimping tool manufactured by PHOENIX CONTACT, to prepare wire ends with insulated sleeves before connecting to the drive. See Table 3.10 for dimensions.

Figure 3.28 Ferrule Dimensions
Table 3.10 Ferrule Terminal Types and Sizes

| Size $\mathbf{m m}^{\mathbf{2}}$ (AWG) | Type | $\mathbf{L}(\mathbf{m m})$ | $\mathbf{d 1}(\mathbf{m m})$ | $\mathbf{d 2}(\mathbf{m m})$ | Manufacturer |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $0.25(24)$ | AI 0.25-8YE | 12.5 | 0.8 | 1.8 | PHOENIX CONTACT |
| $0.34(22)$ | AI 0.34-8TQ | 10.5 | 0.8 | 1.8 |  |
| $0.5(20)$ | AI 0.5-8WH or <br> AI 0.5-8OG | 14 | 1.1 | 2.5 |  |

## - Wiring the Control Circuit Terminal

This section describes the proper procedures and preparations for wiring the control terminals.
WARNING! Electrical Shock Hazard. Do not remove covers or touch the circuit boards while the power is on. Failure to comply could result in death or serious injury.

NOTICE: Separate control circuit wiring from main circuit wiring (terminals R/L1, S/L2, T/L3, B1, B2, U/T1, V/T2, W/T3, -, +1, +2) and other high-power lines. Improper wiring practices could result in drive malfunction due to electrical interference.
NOTICE: Separate wiring for digital output terminals MA, MB, MC, and M1 to M6 from wiring to other control circuit lines. Improper wiring practices could result in drive or equipment malfunction or nuisance trips.
NOTICE: Use a class 2 power supply when connecting to the control terminals. Improper application of peripheral devices could result in drive performance degradation due to improper power supply. Refer to NEC Article 725 Class 1, Class 2, and Class 3 Remote-Control, Signaling, and Power Limited Circuits for requirements concerning class 2 power supplies.
NOTICE: Insulate shields with tape or shrink tubing to prevent contact with other signal lines and equipment. Improper wiring practices could result in drive or equipment malfunction due to short circuit.
NOTICE: Connect the shield of shielded cable to the appropriate ground terminal. Improper equipment grounding could result in drive or equipment malfunction or nuisance trips.
Wire the control circuit only after terminals have been properly grounded and main circuit wiring is complete. Refer to Terminal Board Wiring Guide on page 68 for details. Prepare the ends of the control circuit wiring as shown in Figure 3.31. Refer to Wire Gauges on page 66.

NOTICE: Do not tighten screws beyond the specified tightening torque. Failure to comply may result in erroneous operation, damage to the terminal block, or cause a fire.

NOTICE: Use shielded twisted-pair cables as indicated to prevent operating faults. Improper wiring practices could result in drive or equipment malfunction due to electrical interference.
Connect control wires as shown in Figure 3.29 and Figure 3.30.

A - Loosen screw to insert wire. B - Single wire or stranded wire
C - Avoid fraying wire strands when stripping insulation from wire. Strip length 5.5 mm .
D - Blade depth of 0.4 mm or less
Blade width of 2.5 mm or less

Figure 3.29 Terminal Board Wiring Guide

Figure 3.30 Terminal Board Location Inside the Drive
When setting the frequency by analog reference from an external potentiometer, use shielded twisted-pair wires (preparing wire ends as shown in Figure 3.31) and connect the shield to the ground terminal of the drive.

Figure 3.31 Preparing the Ends of Shielded Cables
NOTICE: The analog signal wiring between the drive and the operator station or peripheral equipment should not exceed 50 meters when using an analog signal from a remote source to supply the frequency reference. Failure to comply could result in poor system performance.

### 3.8 Control I/O Connections

## Sinking/Sourcing Mode Switch for Digital Inputs

Use the wire jumper between terminals SC and SP or SC and SN to select between Sink mode, Source mode or external power supply for the digital inputs S1 to S8 as shown in Table 3.11 (Default: Sink mode, internal power supply).
NOTICE: Do not short terminals SP and SN. Failure to comply will damage the drive.
Table 3.11 Digital Input Sink/Source/External Power Supply Selection

## Sinking/Sourcing Mode Selection for Safe Disable Inputs

Note: Terminals H1, H2, DM + , and DM- on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.
Use jumper S3 on the terminal board to select between Sink mode, Source mode or external power supply for the Safe Disable inputs H1 and H2 as shown in Table 3.11 (Default: Source mode, internal power supply).

Table 3.12 Safe Disable Input Sink/Source/External Power Supply Selection

## - Using the Pulse Train Output

The pulse train output terminal MP can supply power or be used with an external power supply.
NOTICE: Connect peripheral devices in accordance with the specifications. Failure to comply may cause unexpected drive operation, and can damage the drive or connected circuits.

Using Power from the Pulse Output Terminal (Source Mode)
The high voltage level of the pulse output terminal depends on the load impedance.

| Load Impedance $\mathbf{R}_{\mathbf{L}}(\mathbf{k} \boldsymbol{\Omega})$ | Output Voltage $\mathbf{V}_{\mathbf{M P}}(\mathbf{V})$ (insulated) |
| :---: | :---: |
| $1.5 \mathrm{k} \Omega$ | 5 V |
| $4 \mathrm{k} \Omega$ | 8 V |
| $10 \mathrm{k} \Omega$ | 10 V |

Note: The load resistance needed in order to get a certain high level voltage $V_{M P}$ can be calculated by: $R_{L}=V_{M P} \cdot 2 /\left(12-V_{M P}\right)$

Figure 3.32 Pulse Output Connection Using Internal Voltage Supply

## Using External Power Supply (Sink Mode)

The high voltage level of the pulse output signal depends on the external voltage applied. The voltage must be between 12 and 15 Vdc . The load resistance must be adjusted so that the current is lower than 16 mA .

| External Power Supply (V) | Load Impedance (k $\mathbf{\Omega})$ |
| :---: | :---: |
| 12 to $15 \mathrm{Vdc} \pm 10 \%$ | $1.0 \mathrm{k} \Omega$ or higher |

Figure 3.33 Pulse Output Connection Using External Voltage Supply

## Terminal A2 Input Signal Selection

Terminal A2 can be used to input either a voltage or a current signal. Select the signal type using switch S1 as explained in Table 3.13. Set parameter H3-09 accordingly as shown in Table 3.14.

Note: If terminals A1 and A2 are both set for frequency bias $(\mathrm{H} 3-02=0$ and $\mathrm{H} 3-10=0)$, both input values will be combined to create the frequency reference.

Table 3.13 DIP Switch S1 Settings

| Setting |  |
| :---: | :---: |
| V (left position) | Description |
| I (right position) | Voltage input ( -10 to +10 V ) |

Table 3.14 Parameter H3-09 Details

| No. | Parameter Name | Description | Setting <br> Range | Default <br> Setting |
| :---: | :--- | :--- | :---: | :---: |
| H3-09 | Terminal A2 signal level selection | Selects the signal level for terminal A2. <br> $0: 0$ to 10 Vdc <br> $1:-10$ to 10 Vdc <br> $2: 4$ to 20 mA <br> $3: 0$ to 20 mA |  |  |
|  |  |  |  |  |

## Terminal A3 Analog/PTC Input Selection

Terminal A3 can be configured either as multi-function analog input or as PTC input for motor thermal overload protection. Use switch S4 to select the input function as described in Table 3.15.

Table 3.15 DIP Switch S4 Settings

| Setting | Description |
| :---: | :---: |
| AI (lower position) (default) | Analog input for the function selected in parameter H3-06 |
| PTC (upper position) | PTC input. Parameter H3-06 must be set to E (PTC input) |

### 3.8 Control I/O Connections

## - Terminal AM/FM Signal Selection

The signal type for terminals AM and FM can be set to either voltage or current output using jumper S5 on the terminal board as explained in Table 3.16. When changing the setting of jumper S5, parameters H4-07 and H4-08 must be set accordingly. The default selection is voltage output for both terminals.

Table 3.16 Jumper S5 Settings

| Terminal | Voltage Output | Current Output |
| :---: | :---: | :---: |
| Terminal AM |  |  |
| Terminal FM |  |  |

Table 3.17 Parameter H4-07 and H4-08 Details

| No. | Parameter Name | Description | Setting <br> Range | Default <br> Setting |
| :---: | :--- | :--- | :---: | :---: |
| H4-07 | Terminal AM signal level selection | $0: 0$ to 10 Vdc <br> $1:-10$ to 10 Vdc <br> $2: 4$ to 20 mA | 0 to 2 | 0 |
| H4-08 | Terminal FM signal level selection |  | 0 |  |

### 3.9 Connect to a PC

This drive is equipped with a USB port (type-B).
The drive can connect to a USB port on a PC using a USB 2.0, AB-type cable (sold separately). After connecting the drive to a PC, Yaskawa DriveWizard Plus software can be used to monitor drive performance and manage parameter settings. Contact Yaskawa for more information on DriveWizard Plus.

Figure 3.34 Connecting to a PC (USB)

### 3.10 Wiring Checklist

| $\square$ | No. | Item | Page(s) |
| :---: | :---: | :---: | :---: |
| Drive, Peripherals, Option Cards |  |  |  |
| $\square$ | 1 | Check drive model number to ensure receipt of correct model. | 22 |
| $\square$ | 2 | Make sure you have the correct braking resistors, DC link chokes, noise filters, and other peripheral devices. | - |
| $\square$ | 3 | Check the option card model number. | - |
| Installation Area and Physical Setup |  |  |  |
| $\square$ | 4 | Ensure that the area surrounding the drive complies with specifications. | 28 |
| Power Supply Voltage, Output Voltage |  |  |  |
| $\square$ | 5 | The voltage from the power supply should be within the input voltage specification range of the drive. | 103 |
| $\square$ | 6 | The voltage rating for the motor should match the drive output specifications. | 22 |
| $\square$ | 7 | Verify that the drive is properly sized to run the motor. | 239 |
| Main Circuit Wiring |  |  |  |
| $\square$ | 8 | Confirm proper branch circuit protection as specified by national and local codes. | 40 |
| $\square$ | 9 | Properly wire the power supply to drive terminals R/L1, S/L2, and T/L3. <br> Note: Confirm the following when wiring models CIMR-AD4A0930 and 4A1200: <br> - Remove the jumpers shorting terminals R/L1-R1/L11, S/L2-S1/L21, and T/L3-T1/L31 when operating with 12-phase rectification. <br> - When operating without 12-phase rectification, properly wire terminals R1/L11, S1/L21, and T1/L31 in addition to terminals R/L1, S/L2, and T/L3. | 43 |
| $\square$ | 10 | Properly wire the drive and motor together. <br> The motor lines and drive output terminals $\mathrm{R} / \mathrm{T} 1, \mathrm{~V} / \mathrm{T} 2$, and $\mathrm{W} / \mathrm{T} 3$ should match in order to produce the desired phase order. If the phase order is incorrect, the drive will rotate in the opposite direction. | 62 |
| $\square$ | 11 | Use 600 Vac vinyl-sheathed wire for the power supply and motor lines. | 55 |
|  |  | Use the correct wire gauges for the main circuit. Refer to Wire Gauges and Tightening Torque on page 55. | 55 |
| $\square$ | 12 | - Consider the amount of voltage drop when selecting wire gauges. Increase the wire gauge when the voltage drop is greater than $2 \%$ of motor rated voltage. Ensure the wire gauge is suitable for the terminal block. Use the following formula to calculate the amount of voltage drop: <br> Line drop voltage $(\mathrm{V})=\sqrt{3} \times$ wire resistance $(\Omega / \mathrm{km}) \times$ wire length $(\mathrm{m}) \times$ current $(\mathrm{A}) \times 10^{-3}$ <br> - If the cable between the drive and motor exceeds 50 m , adjust the carrier frequency set to C6-02 accordingly. | 62 |
| $\square$ | 13 | Properly ground the drive. Review page $\mathbf{6 2}$. | 62 |
| $\square$ | 14 | Tighten control circuit and grounding terminal screws. Refer to Wire Gauges and Tightening Torque on page 55. | 55 |
| $\square$ | 15 | Set up overload protection circuits when running multiple motors from a single drive. <br> Note: Close $\mathrm{MC} 1-\mathrm{MCn}$ before operating the drive. $\mathrm{MC} 1-\mathrm{MCn}$ cannot be switched off during run. | - |
| $\square$ | 16 | Install a magnetic contactor when using a dynamic braking option. Properly install the resistor and ensure that overload protection shuts off the power supply using the magnetic contactor. | - |
| $\square$ | 17 | Verify phase advancing capacitors, input noise filters, or GFCIs are NOT installed on the output side of the drive. | - |
| Control Circuit Wiring |  |  |  |
| $\square$ | 18 | Use twisted-pair line for all drive control circuit wiring. | 67 |
| $\square$ | 19 | Ground the shields of shielded wiring to the GND $\oplus$ terminal. | 67 |
| $\square$ | 20 | For 3-Wire sequence, set parameters for multi-function contact input terminals S1-S8, and wire control circuits. | - |
| $\square$ | 21 | Properly wire any option cards. | 67 |
| $\square$ | 22 | Check for any other wiring mistakes. Only use a multimeter to check wiring. | - |
| $\square$ | 23 | Properly fasten drive control circuit terminal screws. Refer to Wire Gauges and Tightening Torque on page 55. | 55 |
| $\square$ | 24 | Pick up all wire clippings. | - |

| $\square$ | No. | Item | Page(s) |
| :---: | :---: | :--- | :--- |
| $\square$ | 25 | Ensure that no frayed wires on the terminal block are touching other terminals or connections. | - |
| $\square$ | 26 | Properly separate control circuit wiring and main circuit wiring. | - |
| $\square$ | 27 | Analog signal line wiring should not exceed 50 m. | - |
| $\square$ | 28 | Safe Disable input wiring should not exceed 30 m. | - |

## Start-Up Programming \& Operation

This chapter explains the functions of the digital operator and how to program the drive for initial operation.
4.1 USING THE DIGITAL OPERATOR ..... 78
4.2 THE DRIVE AND PROGRAMMING MODES ..... 82
4.3 START-UP FLOWCHARTS ..... 85
4.4 POWERING UP THE DRIVE. ..... 90
4.5 APPLICATION SELECTION ..... 91
4.6 BASIC DRIVE SETUP ADJUSTMENTS ..... 92
4.7 AUTO-TUNING ..... 121
4.8 NO-LOAD OPERATION TEST RUN ..... 127
4.9 TEST RUN WITH LOAD CONNECTED. ..... 129
4.10 TEST RUN CHECKLIST ..... 130

### 4.1 Using the Digital Operator

Use the digital operator to enter Run and Stop commands, edit parameters, and display data including fault and alarm information.

## Keys and Displays

Figure 4.1 Keys and Displays on the Digital Operator

| No. | Display | Name | Function |
| :---: | :---: | :---: | :---: |
| 1 | $\begin{aligned} & \text { F1 } \\ & \hline F 2 \end{aligned}$ | $\begin{aligned} & \text { Function Key } \\ & \text { (F1, F2) } \end{aligned}$ | The functions assigned to F1 and F2 vary depending on the currently displayed menu. The name of each function appears in the lower half of the display window. |
| 2 | Esc | ESC Key | - Returns to the previous display. <br> - Moves the cursor one space to the left. <br> - Pressing and holding this button will return to the Frequency Reference display. |
| 3 | $\underset{\text { RESET }}{>}$ | RESET Key | - Moves the cursor to the right. <br> - Resets the drive to clear a fault situation. |
| 4 | ${ }^{\circ}$ (1)RUN | RUN Key | Starts the drive in LOCAL mode. |
| 5 | $\lambda$ | Up Arrow Key | Scrolls up to display the next item, selects parameter numbers, and increments setting values. |
| 6 | V | Down Arrow Key | Scrolls down to display the previous item, selects parameter numbers, and decrements setting values. |
| 7 | © STOP | STOP Key ${ }^{\text {<1> }}$ | Stops drive operation. |
| 8 | $\underset{\text { ENTER }}{\text { den }}$ | ENTER Key | - Enters parameter values and settings. <br> - Selects a menu item to move between displays |
| 9 | P $\frac{10}{\text { RE }}$ | LO/RE Selection Key ${ }^{\text {<2> }}$ | Switches drive control between the operator (LOCAL) and an external source (REMOTE) for the Run command and frequency reference. |
| 10 |  | RUN Light | Lit while the drive is operating the motor. Refer to page 80 for details. |
| 11 | P $\frac{10}{\text { RE }}$ | LO/RE Light | Lit while the operator is selected to run the drive (LOCAL mode). Refer to page 80 for details. |
| 12 | ALM | ALM LED Light | Refer to ALARM (ALM) LED Displays on page 80. |

$<1>$ The STOP key has highest priority. Pressing the STOP key will always cause the drive to stop the motor, even if a Run command is active at any external Run command source. To disable the STOP key priority, set parameter o2-02 to 0 .
$<2>$ The LO/RE key can only switch between LOCAL and REMOTE when the drive is stopped. To disable the LO/RE key to prohibit switching between LOCAL and REMOTE, set parameter o2-01 to 0 .

## LCD Display

Figure 4.2 LCD Display
Table 4.1 Display and Contents

| No. | Name | Display | Content |
| :---: | :---: | :---: | :---: |
| 1 | Operation Mode Menus | MODE | Displayed when in Mode Selection. |
|  |  | MONITR | Displayed when in Monitor Mode. |
|  |  | VERIFY | Indicates the Verify Menu. |
|  |  | PRMSET | Displayed when in Parameter Setting Mode. |
|  |  | A.TUNE | Displayed during Auto-Tuning. |
|  |  | SETUP | Displayed when in Setup Mode. |
| 2 | DriveWorksEZ Function Selection | DWEZ | Displayed when DriveWorksEZ is set to enable. (A1-07 = 1 or 2) |
| 3 | Mode Display Area | DRV | Displayed when in Drive Mode. |
|  |  | PRG | Displayed when in Programming Mode. |
| 4 | Ready | Rdy | Indicates the drive is ready to run. |
| 5 | Data Display | - | Displays specific data and operation data. |
| 6 | Frequency Reference Assignment ${ }^{<1>}$ | OPR | Displayed when the frequency reference is assigned to the LCD Operator Option. |
|  |  | AI | Displayed when the frequency reference is assigned to the Analog Input of the drive. |
|  |  | COM | Displayed when the frequency reference is assigned to the MEMOBUS/Modbus Communication Inputs of the drive. |
|  |  | OP | Displayed when the frequency reference is assigned to an Option Unit of the drive. |
|  |  | RP | Displayed when the frequency reference is assigned to the Pulse Train Input of the drive. |
| 7 | LO/RE <br> Display ${ }^{<2>}$ | RSEQ | Displayed when the run command is supplied from a remote source. |
|  |  | LSEQ | Displayed when the run command is supplied from the operator keypad. |
|  |  | RREF | Displayed when the run command is supplied from a remote source. |
|  |  | LREF | Displayed when the run command is supplied from the operator keypad. |
| 8 | $\text { Function Key } 2$(F2) | FWD/REV | Pressing F2 switches between forward and reverse. |
|  |  | DATA | Pressing F2 scrolls to the next display. |
|  |  | $\rightarrow$ |  |
|  |  | RESET | Pressing F2 resets the existing drive fault error. |
| 9 | FWD/REV | FWD | Indicates forward motor operation. |
|  |  | REV | Indicates reverse motor operation. |

| No. | Name | Display | Content |
| :---: | :---: | :---: | :---: |
| 10 | Function Key 1 (F1) | JOG | Pressing F1 executes the Jog function. |
|  |  | HELP | Pressing F1 displays the Help menu. |
|  |  | $\leftarrow$ | Pressing F1 scrolls the cursor to the left. |
|  |  | HOME | Pressing F1 returns to the top menu (Frequency Reference). |
|  |  | ESC | Pressing F1 returns to the previous display. |

$<1>$ Displayed when in Frequency Reference Mode.
$<2>$ Displayed when in Frequency Reference Mode and Monitor Mode.

## - ALARM (ALM) LED Displays

Table 4.2 ALARM (ALM) LED Status and Contents

| State | Content | Display |
| :---: | :---: | :---: |
| Illuminated | When the drive detects an alarm or error. | $\overline{\overline{\mathrm{AL}} \\|} \mid$ |
| Flashing | - When an alarm occurs. <br> - When an oPE is detected. <br> - When a fault or error occurs during Auto-Tuning. |  |
| Off | Normal operation (no fault or alarm). | \# ALM \| ${ }^{\text {/ }}$ |

## - LO/RE LED and RUN LED Indications

Table 4.3 LO/RE LED and RUN LED Indications

| LED | Lit | Flashing | Flashing Quickly | Off |
| :---: | :---: | :---: | :---: | :---: |
| $\frac{10}{R E}$ | When the operator is selected for Run command and frequency reference control (LOCAL) | - | - | When a device other than the operator is selected for Run command and frequency reference control (REMOTE) |
| P(1)RUN | During run | - During deceleration to stop <br> - When a Run command is input and frequency reference is 0 Hz | - While the drive was set to LOCAL, a Run command was entered to the input terminals then the drive was switched to REMOTE. <br> - A Run command was entered via the input terminals while the drive was not in Drive Mode. <br> - During deceleration when a Fast Stop command was entered. <br> - The drive output is shut off by the Safe Disable function. <br> - The STOP key was pressed while drive was running in REMOTE. <br> - The drive was powered up with b1-17 = 0 (default) while the Run command is active. | During stop |
| Examples | Prun | "rásRUN | ran | - $)^{\text {a }}$ RUN |

## Menu Structure for Digital Operator

Figure 4.3 Digital Operator Menu and Screen Structure
Pressing ${ }^{\wedge}$ RUN will start the motor.
<2> Drive cannot operate motor.
<3> Flashing characters are shown as $\mathbf{0}$.
<4> " X " characters are used as examples in this manual. The LCD Operator will display the actual setting values.
<5> The Frequency Reference appears after the initial display that shows the product name.
$<6>$ The information that appears on the display will vary depending on the drive.

### 4.2 The Drive and Programming Modes

The drive has a Drive Mode to operate the motor and a Programming Mode to edit parameter settings.
Drive Mode: In Drive Mode the user can operate the motor and observe U Monitor parameters. Parameter settings cannot be edited or changed when in Drive Mode.
Programming Mode: In Programming Mode the user can edit and verify parameter settings and perform Auto-Tuning. When the drive is in Programming Mode it will not accept a Run command unless b1-08 is set to 1 .

Note: 1. If bl-08 is set to 0 , the drive will only accept a Run command in Drive Mode. After editing parameters, the user must exit the Programming Mode and enter Drive Mode before operating the motor.
2. Set b1-08 to 1 to allow motor operation from the drive while in Programming Mode.

## Changing Parameter Settings or Values

This example explains changing C1-02 (Deceleration Time 1) from 10.0 seconds (default) to 20.0 seconds.

|  | Step |  | Display/Result |
| :---: | :---: | :---: | :---: |
| 1. | Turn on the power to the drive. The initial display appears. | $\rightarrow$ |  |
| 2. | Press or until the Parameter Setting Mode screen appears. | $\rightarrow$ |  |
| 3. | Press enitir to enter the parameter menu tree. | $\rightarrow$ | - PRMSET- PRG <br> Initialization <br> A1-00= 0 <br> Select Language <br> $L$ |
| 4. | Press $\triangle$ or to select the C parameter group. | $\rightarrow$ | -PRMSET- PRG <br> Basic Setup <br> C1-01= 10.0 sec <br> Accel Time 1 <br> $-\quad$ FWD |
| 5. | Press ender two times. |  |  |
| 6. | Press $\mathrm{V}^{\text {or }}$ to select parameter C1-02. | $\rightarrow$ | -PRMSET- PRG <br> Decel Time 1 <br> - C1-02= 10.0 Sec <br> $(0.0 \sim 6000.0)$ <br> "10.0 sec" <br> $-\quad$ FWD $\quad \rightarrow$ |
| 7. | Press $\underset{\text { GNIER }}{ }$ to view the current setting value ( 10.0 s ). The leftmost digit flashes. | $\rightarrow$ |  |
| 8. | Press F1 , F2 , or Bresti until the desired number is selected. "1" flashes. | $\rightarrow$ | - PRMSET- PRG <br> Decel Time 1 <br> $-\mathrm{C} 1-02=0010.0 \mathrm{Sec}$ <br> $(0.0 \sim 6000.0)$ <br> $" 10.0 \mathrm{sec} "$ <br> $L$ FWD $\quad$ |
| 9. | Press $\backslash$ and enter 0020.0. | $\rightarrow$ | -PRMSET- PRG <br> Decel Time 1 <br> $-1-02=0020.0 \mathrm{Sec}$ <br> C1 $0.0 \sim 6000.0)$ <br> "10.0 sec" <br> $-\quad$ FWD $\quad \rightarrow$ |

| Step |  | Display/Result |  |
| :---: | :---: | :---: | :---: |
| 10. | Press $\underset{\text { ENTER }}{\text { P }}$ to confirm the change. | $\rightarrow$ | Entry Accepted |
| 11. | The display automatically returns to the screen shown in Step 4. | $\rightarrow$ |  |
| 12. | Press Esc as many times as necessary to return to the initial display. | $\rightarrow$ | -MODE- DRV Rdy <br> FREF (OPR) <br> U1-01= 0.00 Hz <br> $01--2=0.0-\mathrm{Ozz}$ <br> LSEQ <br> U1-03= 0.009 LREF <br> JOG FWD FWDIREV |

## Setup Group Parameters

Table 4.4 lists the parameters available by default in the Setup Group. Selecting an Application Preset in parameter A1-06 or from the Application Selection Menu of the Setup Group automatically changes the parameters selected for the Setup Group. Refer to Application Selection on page 91 for more information.
Use the Programming Mode to access parameters not displayed in the Setup Group.
Table 4.4 Setup Group Parameters

| Parameter | Name | Parameter | Name |
| :---: | :---: | :---: | :---: |
| A1-02 | Control Method Selection | E1-09 | Minimum Output Frequency |
| b1-01 | Frequency Reference Selection 1 | E1-13 | Base Voltage |
| b1-02 | Run Command Selection 1 | E2-01 | Motor Rated Current |
| b1-03 | Stopping Method Selection | E2-11 | Motor Rated Power |
| C1-01 | Acceleration Time 1 | E5-01 | Motor Code Selection |
| C1-02 | Deceleration Time 1 | E5-02 | Motor Rated Power |
| C6-01 | Drive Duty Mode | E5-03 | Motor Rated Current |
| C6-02 | Carrier Frequency Selection | E5-04 | Number of Motor Poles |
| d1-01 | Frequency Reference 1 | E5-05 | Motor Stator Resistance |
| d1-02 | Frequency Reference 2 | E5-06 | Motor d-Axis Inductance |
| d1-03 | Frequency Reference 3 | E5-07 | Motor q-Axis Inductance |
| d1-04 | Frequency Reference 4 | E5-09 | Motor Induction Voltage Constant 1 |
| d1-17 | Jog Frequency Reference | E5-24 | Motor Induction Voltage Constant 2 |
| E1-01 | Input Voltage Setting | H4-02 | Multi-Function Analog Output Terminal FM Gain |
| E1-04 | Maximum Output Frequency | H4-05 | Multi-Function Analog Output Terminal AM Gain |
| E1-05 | Maximum Voltage | L1-01 | Motor Overload Protection Function Selection |
| E1-06 | Base Frequency | L3-04 | Stall Prevention Selection during Deceleration |

Note: Parameter availability depends on the control mode set in A1-02; some parameters listed above may not be accessible in all control modes.

## - Switching Between LOCAL and REMOTE

LOCAL mode is when the drive is set to accept the Run command from the digital operator RUN key. REMOTE mode is when the drive is set to accept the Run command from an external device (i.e., input terminals or serial communications).
WARNING! Sudden Movement Hazard. The drive may start unexpectedly if the Run command is already applied when switching from LOCAL mode to REMOTE mode when $b 1-07=1$, resulting in death or serious injury. Be sure all personnel are clear of rotating machinery.
Switch the operation between LOCAL and REMOTE using the LO/RE key on the digital operator or via a digital input.
Note: 1. After selecting LOCAL, the LO/RE light will remain lit.
2. The drive will not allow the user to switch between LOCAL and REMOTE during run.

## Using the LO/RE Key on the Digital Operator

| Step |  |  | Display/Result |
| :---: | :---: | :---: | :---: |
| 1. | Turn on the power to the drive. The initial display appears. | $\rightarrow$ |  |
| 2. | The LO/RE light will light up. The drive is now in LOCAL. To set the drive for REMOTE operation, press the $\square$ key again. | $\rightarrow$ |  |

## Using Input Terminals S1 through S8 to Switch between LOCAL and REMOTE

It is possible to switch between LOCAL and REMOTE modes using one of the digital input terminals S1 through S8 (set the corresponding parameter H1- $\square \square$ to " 1 ").
Refer to Parameter List on page 187 for a list of H1- $\square \square$ digital input selections when setting multi-function input terminals.
Note: Setting H1- $\square \square$ to 1 disables the LO/RE key on the digital operator.

## 4．3 Start－Up Flowcharts

These flowcharts summarize steps required to start the drive．Use the flowcharts to determine the most appropriate start－up method for a given application．The charts are quick references to help familiarize the user with start－up procedures．

Note：1．Refer to Application Selection on page 91 to set up the drive using one of the Application Presets．
2．Function availability differs for drive models CIMR－AD4A0930 and 4A1200．Refer to Parameter List on page 187 for details．

| Flowchart | Subchart | Objective | Page |
| :---: | :---: | :--- | :---: |
| A | - | Basic start－up procedure and motor tuning | $\mathbf{8 6}$ |
| - | A－1 | Simple motor setup using V／f mode | $\mathbf{8 7}$ |
|  | A－2 | High－performance operation using Open Loop Vector or Closed Loop Vector motor control | $\mathbf{8 8}$ |
|  | A－3 | Setting up the drive to run a permanent magnet（PM）motor <br> Note：PM motor control modes are not available on 600 V class drives， <br> CIMR－AD5ロロロロロロ． | $\mathbf{8 9}$ |

### 4.3 Start-Up Flowcharts

## Flowchart A: Basic Start-Up and Motor Tuning

Flowchart A in Figure 4.4 describes a basic start-up sequence that varies slightly depending on the application. Use the drive default parameter settings in simple applications that do not require high precision.

Figure 4.4 Basic Start-Up
Note: 1. Execute Stationary Auto-Tuning for Line-to-Line Resistance if the drive has been Auto-Tuned and then moved to a different location where the motor cable length exceeds 50 m .
2. Perform Auto-Tuning again after installing an AC reactor or other such components to the output side of the drive.

## Subchart A-1: Simple Motor Setup Using V/f Control

Flowchart A1 in Figure 4.5 describes simple motor setup for V/f Control, with or without PG feedback. V/f Control is suited for more basic applications such as fans and pumps. This procedure illustrates Energy Savings and Speed Estimation Speed Search.

Figure 4.5 Simple Motor Setup with Energy Savings or Speed Search

## Subchart A-2: High Performance Operation Using OLV or CLV

Flowchart A2 in Figure 4.6 describes the setup procedure for high-performance with Open Loop Vector Control or Closed Loop Vector Control, which is appropriate for applications requiring high starting torque and torque limits.

Note: Although the drive sets parameters for the PG encoder during Auto-Tuning, sometimes the direction of the motor and direction of the PG get reversed. Use parameter F1-05 to switch the direction of the PG so that it matches the motor direction.

Figure 4.6 Flowchart A2: High Performance Operation Using OLV or CLV
<1> Decouple the load from the motor to properly perform Rotational Auto-Tuning.
$<2>$ Rotational Auto-Tuning can still be performed if the load is $30 \%$ or less, though Stationary Auto-Tuning may yield better control performance.
Make sure the motor and load can run freely (i.e., if a brake is mounted, make sure it is released).
<4>
ASR Gain Tuning automatically performs Inertia Tuning and sets parameters related to Feed Forward and the KEB Ride-Thru function.

## Subchart A-3: Operation with Permanent Magnet Motors

Note: PM motor control modes are not available on 600 V class drives, CIMR-A $\square$ 5 $\square \square \square \square \square$.
Flowchart A3 in Figure 4.7 describes the setup procedure for running a PM motor in Open Loop Vector Control. PM motors can be used for more energy-efficient operation in reduced or variable torque applications.

Note: 1. Although the drive sets parameters for the PG encoder during Auto-Tuning, sometimes the direction of the motor and direction of the PG get reversed. Use parameter F1-05 to switch the direction of the PG so that it matches the motor direction.
2. Realign the $Z$ Pulse if the PG encoder is replaced. Set T2-01 to 3 to recalibrate the drive for the new encoder.

Figure 4.7 Operation with Permanent Magnet Motors
<1> Enter the motor code to E5-01 when using a Yaskawa PM motor (SMRA Series, SSR1 Series, and SST4 Series). If using a motor from another manufacturer, enter "FFFF".
<2> Make sure the motor and load can run freely (i.e., if a brake is mounted, make sure it is released).
$<3>$ ASR Gain Tuning automatically performs Inertia Tuning and sets parameters related to Feed Forward and the KEB Ride-Thru function.
<4> Back EMF Constant Tuning automatically measures motor induced voltage and then sets E5-09 when the motor report or data sheets are not available.
$<5>$ This type of Auto-Tuning is available in drive software versions S1015 and later.
<6> This type of Auto-Tuning is not available in models CIMR-A■4A0930 or 4A1200

### 4.4 Powering Up the Drive

## Powering Up the Drive and Operation Status Display <br> Powering Up the Drive

Review the following checklist before turning the power on.

| Item to Check | Description |
| :--- | :--- |
| Power supply voltage | 200 V class: Three-phase 200 to $240 \mathrm{Vac} 50 / 60 \mathrm{~Hz}$ <br> 400 V class: Three-phase 380 to $480 \mathrm{Vac} 50 / 60 \mathrm{~Hz}$ <br> 600 V class: Three-phase 500 to $600 \mathrm{Vac} 50 / 60 \mathrm{~Hz}$ |
|  | Properly wire the power supply input terminals (R/L1, S/L2, T/L3). |
|  | Check for proper grounding of drive and motor. |
| Drive output terminals and <br> motor terminals | Properly wire drive output terminals U/T1, V/T2, and W/T3 with motor terminals U, V, and W. |
| Control circuit terminals | Check control circuit terminal connections. |
| Drive control terminal status | Open all control circuit terminals (off). |
| Status of the load and connected <br> machinery | Decouple the motor from the load. |

$<1>$ Confirm the following when connecting models CIMR-A $\square 4 \mathrm{~A} 0930$ and 4A1200: Remove the jumpers on R1/L11, S1/L21, and T1/L31 when using 12-phase rectification. When operating without 12-phase rectification, properly wire terminals R1/L11, S1/L21, and T1/L31 in addition to terminals R/L1, S/L2, and T/L3.

## Status Display

When the power supply to the drive is turned on, the digital operator lights will appear as follows:

| Status | Name | Description |
| :---: | :---: | :---: |
| Normal Operation |  | The data display area displays the frequency reference. $\overline{\text { DRV }}$ is lit. |
| Fault | External fault (example) | Data displayed varies by the type of fault. Refer to Fault Displays, Causes, and Possible Solutions on page 135 for more information. $\operatorname{ALM}$ and $\overline{D R V}$ are lit. |

### 4.5 Application Selection

Several Application Presets are available to facilitate drive setup for commonly used applications. Selecting one of these Application Presets automatically assigns functions to the input and output terminals and sets a predefined group of parameters to values appropriate for the selected application.
In addition, the parameters most likely to be changed are assigned to the group of User Parameters, A2-01 through A2-16. User Parameters are part of the Setup Group, which provides quicker access by eliminating the need to scroll through multiple menus.
An Application Preset can either be selected from the Application Selection menu in the Setup Group or in parameter A1-06. The following presets can be selected:

Note: 1. Application Presets can only be selected if all drive parameters are at their original default settings. It may be necessary to initialize the drive by setting A1-03 to " 2220 " or " 3330 " prior to selecting an Application Preset.
2. Entering a value to A1-06 to enable an Application Preset will fix that value to the parameter. The value cannot be changed without first setting A1-03 to 2220 or 3330 to initialize the drive.
WARNING! Sudden Movement Hazard. Confirm the drive I/O signals and external sequence before performing a test run. Setting parameter A1-06 may automatically change the I/O terminal function from the default setting. Failure to comply may result in death or serious injury.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| A1-06 | Application Presets | 0: Disabled <br> 1: Water supply pump <br> 2: Conveyor <br> 3: Exhaust fan <br> 4: HVAC <br> 5: Compressor | 0 |

### 4.6 Basic Drive Setup Adjustments

This section explains the basic settings required for initial drive operation. Checking these basic parameter settings will help to ensure a successful drive start-up. Refer to Parameter List on page 187 for a complete listing of drive parameters if more information is required for parameters not listed in this section.

## A1-02: Control Method Selection

Selects the Control Method (also referred to as the control mode) that the drive uses to operate the motor. Parameter A1-02 determines the control mode for motor 1 when the drive is set up to run two motors.

Note: When changing control modes, all parameter settings depending upon the setting of A1-02 will be reset to the default.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| A1-02 | Control Method Selection | $0,1,2,3,5,6,7$ | 2 |

## Control Modes for Induction Motors (IM)

## Setting 0: V/f Control for Induction Motors

Use this mode for simple speed control and for multiple motor applications with low demands to dynamic response or speed accuracy. This control mode is also used when the motor parameters are unknown and Auto-Tuning cannot be performed. The speed control range is $1: 40$.

## Setting 1: V/f Control with PG Speed Feedback

Use this mode for general-purpose applications that require high speed accuracy but do not require high dynamic response. This control mode is also used when the motor parameters are unknown and Auto-Tuning cannot be performed. The speed control range is 1:40.

## Setting 2: Open Loop Vector Control

Use this mode for general, variable-speed applications with a speed control range of 1:200 that require precise speed control, quick torque response, and high torque at low speed without using a speed feedback signal from the motor.

## Setting 3: Closed Loop Vector Control

Use this mode for general, variable-speed applications that require precise speed control down to zero speed, quick torque response or precise torque control, and a speed feedback signal from the motor. The speed control range is up to 1:1500.

## Control Modes for Permanent Magnet Motors (SPM or IPM)

## Setting 5: Open Loop Vector Control for PM

Use this mode when running a PM motor in variable torque applications that benefit from energy efficiency. The drive can control an SPM or IPM motor with a speed range of 1:20 in this control mode.

## Setting 6: Advanced Open Loop Vector Control for PM

Use this mode to operate an IPM motor for constant torque applications. Set High Frequency Injection parameter n8-57 to 1 to achieve a speed control range as high as 1:100.

## Setting 7: Closed Loop Vector Control for PM

Use this mode for high-precision control of a PM motor in constant torque or variable torque applications. The speed control range reaches 1:1500. A speed feedback signal is required.

## A1-03: Initialize Parameters

Resets parameters to default values. After initialization, the setting for A1-03 automatically returns to 0 .

| No. | Parameter Name | Setting Range | Default |
| :---: | :--- | :---: | :---: |
| A1-03 | Initialize Parameters | $0,1110,2220,3330,5550$ | 0 |

## Setting 1110: User Initialize

Resets parameters to the values selected by the user as User Settings. User Settings are stored when parameter o2-03 is set to "1: Set defaults".

Note: User Initialization resets all parameters to a user-defined set of default values previously saved to the drive. Set parameter o2-03 to 2 to clear the user-defined default values.

## Setting 2220: 2-Wire Initialization

Resets parameters to default settings with digital inputs S1 and S2 configured as Forward run and Reverse run, respectively.

## Setting 3330: 3-Wire Initialization

Resets parameters to default settings with digital inputs S1, S2, and S5 configured as Run, Stop, and Forward/Reverse respectively. Refer to Setting 0: 3-Wire Sequence on page 110 for more information on digital input functions.

## Setting 5550: oPE04 Reset

An oPE04 error appears on the digital operator when a terminal block with settings saved to its built-in memory is installed in a drive that has edited parameters. Set A1-03 to 5550 to use the parameter settings saved to the terminal block memory.

## Notes on Parameter Initialization

The parameters shown in Table 4.5 will not be reset when the drive is initialized by setting A1-03 $=2220$ or 3330 . Although the control mode in A1-02 is not reset when A1-03 is set to 2220 or 3330, it may change when an application preset is selected.

Table 4.5 Parameters Not Changed by Drive Initialization

| No. | Parameter Name |
| :---: | :---: |
| A1-00 | Language Selection |
| A1-02 | Control Method Selection |
| C6-01 | Duty Selection |
| E1-03 | V/f Pattern Selection |
| E5-01 | Motor Code Selection (for PM motors) |
| F6-08 | Communication Parameter Reset |
| L8-35 | Installation Selection |
| o2-04 | Drive/kVA Selection |

## b1-01: Frequency Reference Selection 1

Selects the frequency reference source 1 for the REMOTE mode.
Note: 1. If a Run command is input to the drive but the frequency reference entered is 0 or below the minimum frequency, the RUN indicator LED on the digital operator will light and the STOP indicator will flash.
2. Press the LO/RE key to set the drive to LOCAL and use the operator keypad to enter the frequency reference.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| b1-01 | Frequency Reference Selection 1 | 0 to 4 | 1 |

Setting 0: Operator keypad
Using this setting, the frequency reference can be input by:

- switching between the multi-speed references in the d1- $\square \square$ parameters.
- entering the frequency reference on the operator keypad.

## Setting 1: Terminals (analog input terminals)

Using this setting, an analog frequency reference can be entered as a voltage or current signal from terminals A1, A2, or A3.

## Voltage Input

Voltage input can be used at any of the three analog input terminals. Make the settings as described in Table 4.6 for the input used.

Table 4.6 Analog Input Settings for Frequency Reference Using Voltage Signals

| Terminal | Signal Level | Parameter Settings |  |  |  | Notes |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Signal Level Selection | Function Selection | Gain | Bias |  |
| A1 | 0 to 10 Vdc | H3-01 $=0$ | $\mathrm{H} 3-02=0$(Frequency Reference Bias) | H3-03 | H3-04 | - |
|  | -10 to +10 Vdc | H3-01 $=1$ |  |  |  |  |
| A2 | 0 to 10 Vdc | H3-09 $=0$ | $\mathrm{H} 3-10=0$ <br> (Frequency Reference Bias) | H3-11 | H3-12 | Set DIP switch S1 on the terminal board to "V" for voltage input. |
|  | -10 to +10 Vdc | H3-09 $=1$ |  |  |  |  |
| A3 | 0 to 10 Vdc | H3-05 $=0$ | $\mathrm{H} 3-06=0$(Frequency Reference Bias) | H3-07 | H3-08 | Set DIP switch S4 on the terminal board to "AI". |
|  | -10 to +10 Vdc | H3-05 $=1$ |  |  |  |  |

### 4.6 Basic Drive Setup Adjustments

Figure 4.8 Setting the Frequency Reference as a Voltage Signal at Terminal A1
Use the wiring example shown in Figure 4.8 for any other analog input terminals. When using input A2 make sure DIP switch S1 is set for voltage input.

## Current Input

Input terminal A2 can accept a current input signal. Refer to Table 4.7 to set terminal A2 for current input.
Table 4.7 Analog Input Settings for Frequency Reference Using a Current Signal

| Terminal | Signal <br> Level | Signal Level <br> Selection |  |  |  | Function <br> Selection |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Bias | Notes |  |  |  |
|  | 4 to 20 mA | $\mathrm{H} 3-09=2$ | H3-10 $=0$ <br> (Frequency Bias) | H3-11 | H3-12 | Make sure to set DIP switch S1 on <br> the terminal board to "I" for <br> current input. |

Figure 4.9 Setting the Frequency Reference as a Current Signal to Terminal A2

## Switching between Main/Auxiliary Frequency References

The frequency reference input can be switched between the analog terminals A1, A2, and A3 using multi-speed inputs. Refer to Multi-Step Speed Selection on page 101 for details on using this function.

## Setting 2: MEMOBUS/Modbus Communications

This setting requires entering the frequency reference via the RS-485/422 serial communications port (control terminals $\mathrm{R}+$, R-, S+, S-).

## Setting 3: Option card

This setting requires entering the frequency reference via an option board plugged into connector CN5-A on the drive control board. Consult the option board manual for instructions on integrating the drive with the communication system.

Note: If the frequency reference source is set for Option PCB (b1-01=3), but an option board is not installed, an oPE 05 Operator Programming
Error will be displayed on the digital operator and the drive will not run.

## Setting 4: Pulse Train Input

This setting requires a pulse train signal to terminal RP to provide the frequency reference. Follow the directions below to verify that the pulse signal is working properly.

## Verifying the Pulse Train is Working Properly

- Set b1-04 to 4 and set H6-01 to 0 .
- Set the H6-02 to the pulse train frequency value that equals $100 \%$ of the frequency reference.
- Enter a pulse train signal to terminal RP and check for the correct frequency reference on the display.

## - b1-02: Run Command Selection 1

Determines the Run command source 1 in the REMOTE mode.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| b1-02 | Run Command Selection 1 | 0 to 3 | 1 |

## Setting 0: Operator

This setting requires entering the Run command via the digital operator RUN key and also illuminates the LO/RE indicator on the digital operator.

## Setting 1: Control Circuit Terminal

This setting requires entering the Run command via the digital input terminals using one of following sequences:

- 2-Wire sequence 1 :

Two inputs (FWD/Stop-REV/Stop). Set A1-03 to 2220 to initialize the drive and preset terminals S1 and S2 to these functions. This is the default setting of the drive.

- 2-Wire sequence 2:

Two inputs (Start/Stop-FWD/REV).

- 3-Wire sequence:

Three inputs (Start-Stop-FWD/REV). Set A1-03 to 3330 to initialize the drive and preset terminals S1, S2, and S5 to these functions. Refer to Setting 0: 3-Wire Sequence on page 110.

## Setting 2: MEMOBUS/Modbus Communications

This setting requires entering the Run command via serial communications by connecting the RS-485/422 serial communication cable to control terminals $\mathrm{R}+, \mathrm{R}-, \mathrm{S}+$, and $\mathrm{S}-$ on the removable terminal block.

## Setting 3: Option Card

This setting requires entering the Run command via the communication option board by plugging a communication option board into the CN5-A port on the control PCB. Refer to the option board manual for instructions on integrating the drive into the communication system.

Note: If b1-02 is set to 3, but an option board is not installed in CN5-A, an oPE05 operator programming error will be displayed on the digital operator and the drive will not run.

## b1-03: Stopping Method Selection

Selects how the drive stops the motor when the Run command is removed or when a Stop command is entered.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| b1-03 | Stopping Method Selection | 0 to 3 | 0 |

## Setting 0: Ramp to Stop

When the Run command is removed, the drive will decelerate the motor to stop. The deceleration rate is determined by the active deceleration time. The default deceleration time is set to parameter C1-02.
When the output frequency falls below the level set in parameter b2-01, the drive will start DC injection, Zero Speed Control, or Short Circuit Braking, depending on the selected control mode. Refer to b2-01: DC Injection Braking Start Frequency
on page 97 for details.

## Setting 1: Coast to Stop

When the Run command is removed, the drive will shut off its output and the motor will coast (uncontrolled deceleration) to stop. The stopping time is determined by the inertia and the friction in the driven system.

### 4.6 Basic Drive Setup Adjustments

Figure 4.10 Coast to Stop
Note: After a stop is initiated, any subsequent Run command entered will be ignored until the minimum baseblock time (L2-03) has expired. Do not enter Run command until it has come to a complete stop. Use DC Injection at Start (Refer to b2: DC Injection Braking and Short Circuit Braking on page 191) or Speed Search (Refer to b3: Speed Search on page 191) to restart the motor before it has completely stopped.

## Setting 2: DC Injection Braking to Stop

When the Run command is removed, the drive will enter baseblock (turn off its output) for the minimum baseblock time (L2-03). When the minimum baseblock time has expired, the drive will inject the amount DC current set in parameter b2-02 into the motor windings to brake the motor. The stopping time in DC Injection Braking to Stop is significantly faster compared to Coast to Stop.

Note: This function is not available in the control modes for PM motors ( $\mathrm{A} 1-02=5,6,7$ ).

Figure 4.11 DC Injection Braking to Stop
DC Injection Braking time is determined by the value set to b2-04 and the output frequency at the time the Run command is removed. It can be calculated by:

$$
\text { DC Injection brake time }=\frac{(\mathrm{b} 2-04) \cdot 10 \cdot \text { Output frequency }}{\text { Max. output frequency }(\mathrm{E} 1-04)}
$$

Figure 4.12 DC Injection Braking Time Depending on Output Frequency
Note: If an overcurrent (oC) fault occurs during DC Injection Braking to Stop, lengthen the minimum baseblock time (L2-03) until the fault no longer occurs.

## Setting 3: Coast to Stop with Timer

When the Run command is removed, the drive will turn off its output and the motor will coast to stop. The drive will not start if a Run command is input before the time $\mathrm{t}(\mathrm{C} 1-02)$ has expired. Cycle the Run command that was activated during time t after $t$ has expired to start the drive.

Figure 4.13 Coast to Stop with Timer
The wait time t is determined by the output frequency when the Run command is removed and by the active deceleration time.

Figure 4.14 Run Wait Time Depending on Output Frequency

## b2-01: DC Injection Braking Start Frequency

Active when "Ramp to Stop" is selected as the stopping method (b1-03=0).

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| b2-01 | DC Injection Braking Start Frequency | 0.0 to 10.0 Hz | Determined by <br> A1-02 |

The function triggered by parameter b2-01 depends on the control mode that has been selected.

## V/f, V/f w/PG, and OLV (A1-02 = 0, 1, 2)

For these control modes, parameter b2-01 sets the starting frequency for DC Injection Braking at Stop. When the output frequency falls below the setting of b2-01, DC Injection Braking is enabled for the time set in parameter b2-04.

Figure 4.15 DC Injection Braking at Stop for V/f, V/f w/PG and OLV
Note: If b2-01 is set to a smaller value than parameter E1-09 (minimum frequency), then DC Injection Braking will begin as soon as the frequency falls to the value set to E1-09.

## OLV/PM and AOLV/PM (A1-02 = 5, 6)

For these control modes, parameter b2-01 sets the starting frequency for Short-Circuit Braking at stop. When the output frequency falls below the setting of b2-01, Short-Circuit Braking is enabled for the time set in parameter b2-13. If DC Injection Braking time is enabled at stop, then DC Injection Braking is performed for the time set in b2-04 after Short-Circuit Braking is complete.

### 4.6 Basic Drive Setup Adjustments

Figure 4.16 Short-Circuit Braking at Stop in OLV/PM and AOLV/PM
Note: If b2-01 is set to a smaller value than parameter E1-09 (minimum frequency), then DC Injection Braking will begin as soon as the frequency falls to the value set to E1-09.

## CLV and CLV/PM (A1-02 = 3, 7)

For these control modes, parameter b2-01 sets the starting frequency for Zero Speed Control (not position lock) at stop. When the output frequency falls below the setting of b2-01, Zero Speed Control is enabled for the time set in parameter b2-04 provided b1-05 is set to 0 .

Figure 4.17 Zero Speed Control at Stop in CLV and CLV/PM
Note: If b2-01 is set lower than the minimum frequency (E1-09), then Zero Speed Control begins at the frequency set to E1-09.

## b3-01: Speed Search Selection at Start

Determines if Speed Search is automatically performed when a Run command is issued.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| b3-01 | Speed Search Selection at Start | 0,1 | Determined by <br> A1-02 |

## Setting 0: Disabled

This setting starts operating the drive at the minimum output frequency when the Run command is entered. If external Speed Search 1 or 2 is already enabled by a digital input, the drive will start operating with Speed Search.

## Setting 1: Enabled

This setting performs Speed Search when the Run command is entered. The drive begins running the motor once Speed Search is complete.

## C1－01 to C1－08：Accel，Decel Times 1 to 4

Four different sets of acceleration and deceleration times can be set in the drive by digital inputs，motor selection，or switched automatically．
Acceleration time parameters always set the time to accelerate from 0 Hz to the maximum output frequency（E1－04）．
Deceleration time parameters always set the time to decelerate from maximum output frequency to 0 Hz ．C1－01 and C1－02 are the default active accel／decel settings．

| No． | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| C1－01 | Acceleration Time 1 |  |  |
| C1－02 | Deceleration Time 1 |  |  |
| C1－03 | Acceleration Time 2 |  | 10.0 s |
| C1－04 | Deceleration Time 2 | 0.0 to $6000.0 \mathrm{~s}<1>$ |  |
| C1－05 | Acceleration Time 3（Motor 2 Accel Time 1） |  |  |
| C1－06 | Deceleration Time 3（Motor 2 Decel Time 1） |  |  |
| C1－07 | Acceleration Time 4（Motor 2 Accel Time 2） |  |  |
| C1－08 | Deceleration Time 4（Motor 2 Accel Time 2） |  |  |

$<1>$ The setting range for the acceleration and deceleration times is determined by the accel／decel time setting units in C1－10．For example，if the time is set in units of $0.01 \mathrm{~s}(\mathrm{C} 1-10=0)$ ，the setting range becomes 0.00 to 600.00 s ．

## Switching Acceleration Times by Digital Input

Accel／decel times 1 are active by default if no input is set．Activate accel／decel times 2，3，and 4 by digital inputs （ $\mathrm{H} 1-\mathrm{D}-7$ and 1A）as explained in Table 4．8．

Table 4．8 Accel／Decel Time Selection by Digital Input

| Accel／Decel Time Sel． 1 H1－$\square$＝ 7 | Accel／Decel Time Sel． 2 H1－$\square$＝1A | Active Times |  |
| :---: | :---: | :---: | :---: |
|  |  | Acceleration | Deceleration |
| 0 | 0 | C1－01 | C1－02 |
| 1 | 0 | C1－03 | C1－04 |
| 0 | 1 | C1－05 | C1－06 |
| 1 | 1 | C1－07 | C1－08 |

Figure 4.18 shows an operation example for changing accel／decel．times．The example below requires that the stopping method be set for＂Ramp to stop＂（b1－03＝0）．

Figure 4．18 Timing Diagram of Accel／Decel Time Change

## Switching Acceleration and Deceleration Times by Motor Selection

When switching between motor 1 and 2 using a digital input（H1－ロロ＝16），parameters C1－01 to C1－04 become accel／decel times 1 and 2 for motor 1，while C1－05 to C1－08 become accel／decel times 1 and 2 for motor 2 ．Accel／decel times 1 and 2 can be switched for each motor using a digital inputs set to H1－口प＝7 like shown in Table 4．9．

Note：1．The motor 2 selection function cannot be used with PM motors．
2．Attempting to use the digital input setting＂Accel／Decel time 2 selection＂$(\mathrm{H} 1-\square \square=1 \mathrm{~A})$ together with motor $1 / 2$ switching triggers an oPE03 error，indicating contradictory multifunction input settings．

Table 4．9 Motor Switching and Accel／Decel Time Combinations

| Accel／Decel Time 1（H1－ロロ＝7） | Motor 1 Selected <br> （Terminal set to H1－ロロ＝16 OFF） |  | Motor 2 Selected <br> （Terminal set to H1－ロロ＝16 ON） |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Accel | Decel | Accel | Decel |
|  | C1－01 | C1－02 | C1－05 | C1－06 |
| Closed | C1－03 | C1－04 | C1－07 | C1－08 |

## Switching Accel／Decel Times by a Frequency Level

The drive can switch between different acceleration and deceleration times automatically．The drive will switch from accel／ decel time 4 in C1－07 and C1－08 to the default accel／decel time in C1－01 and C1－02（C1－05 and C1－06 for motor 2）when the output frequency exceeds the frequency level set to parameter C1－11．When the frequency falls below this level，the accel／ decel times are switched back．Figure 4.19 shows an operation example．

Note：Acceleration and deceleration times selected by digital inputs have priority over the automatic switching by the frequency level set to C1－11． For example，if accel／decel time 2 is selected，the drive will use only accel／decel time 2 ；it will not switch from accel／decel time 4 to the selected one．

Figure 4．19 Accel／Decel Time Switching Frequency

## C6－01：Drive Duty Mode Selection

The drive has two different duty modes from which to select based on the load characteristics．The drive rated current，overload capacity，and maximum output frequency will change depending upon the duty mode selection．Use parameter C6－01 to select Heavy Duty（HD）or Normal Duty（ND）for the application．Refer to Heavy Duty and Normal Duty Ratings on page 172 for details about the rated current．

| No． | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| C6－01 | Duty Mode Selection | 0,1 | 1 （ND） |

Table 4．10 Differences between Heavy Duty and Normal Duty

| Characteristics | Heavy Duty Rating（HD） | Normal Duty Rating（ND） |
| :---: | :---: | :---: |
| C6－01 | 0 | 1 |
| Performance |  |  |
| Application | Use Heavy Duty Rating for applications requiring a high overload tolerance with constant load torque，such as extruders and conveyors． | Use Normal Duty Rating for applications in which the torque requirements drop along with the speed，such as fans and pumps where a high overload tolerance is not required． |
| Overload capability（oL2） | 150\％of drive rated Heavy Duty current for 60 s | $120 \%$ of drive rated Normal Duty current for 60 s |
| Stall Prevention during Acceleration（L3－02） | 150\％ | 120\％ |
| Stall Prevention during Run（L3－06） | 150\％ | 120\％ |
| Default Carrier Frequency | 2 kHz | 2 kHz Swing PWM |

Note：Changing the Duty Mode selection automatically changes the maximum size motor that the drive can run，sets the E2－$\square \square$ parameters to appropriate values（E4－$\square \square$ for motor 2），and recalculates parameter settings determined by motor capacity（e．g．，b8－04，L2－03，n5－02，L3－24， C5－17，and C5－37）．

## - C6-02: Carrier Frequency Selection

Sets the switching frequency of the drive output transistors. Changes to the switching frequency lower audible noise and reduce leakage current.

Note: Increasing the carrier frequency above the default value automatically lowers the drive current rating.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| C6-02 | Carrier Frequency Selection | 1 to F <1> | Determined by A1-02, o2-04. <br> Reset when C6-01 is changed. |

$<1>$ The setting range is 1,2 , and F for models CIMR-AD4A0515 to 4A1200
Note: The default setting for the carrier frequency differs based on the type of motor and the Duty Mode selection. The default is 2 kHz in HD , and "Swing PWM1" in ND. When using a PM motor, the default carrier frequency is 5.0 Hz .

## Settings:

| C6-02 | Carrier Frequency | C6-02 | Carrier Frequency | C6-02 | Carrier Frequency |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 2.0 kHz | 5 | $12.5 \mathrm{kHz}(10.0 \mathrm{kHz})$ | 9 | Swing PWM 3 |
| 2 | $5.0 \mathrm{kHz}(4.0 \mathrm{kHz})$ | 6 | $15.0 \mathrm{kHz}(12.0 \mathrm{kHz})$ | A | Swing PWM 4 |
| 3 | $8.0 \mathrm{kHz}(6.0 \mathrm{kHz})$ | 7 | Swing PWM 1 | F | User defined (C6-03 to C6-05) |
| 4 | $10.0 \mathrm{kHz}(8.0 \mathrm{kHz})$ | 8 | Swing PWM 2 |  |  |

Note: 1. Swing PWM uses a carrier frequency of 2.0 kHz as a base, then applies a special PWM pattern to reduce the audible noise.
2. The value in parenthesis indicates the carrier frequency for AOLV/PM.

Guidelines for Carrier Frequency Parameter Setup

| Symptom | Remedy |
| :---: | :---: |
| Speed and torque are unstable at low speeds | Lower the carrier frequency. |
| Noise from the drive affects peripheral devices |  |
| Excessive leakage current from the drive |  |
| Wiring between the drive and motor is too long ${ }^{<1>}$ |  |
| Audible motor noise is too loud | Increase the carrier frequency or use Swing PWM. ${ }^{<2>}$ |

$<1>$ The carrier frequency may need to be lowered if the motor cable is too long. Refer to the following table.
$<2>$ The default carrier frequency in ND is Swing PWM (C6-02 $=7$ ), using a 2 kHz base. Increasing the carrier frequency is permissible when the drive is set for Normal Duty, however the drive rated current is reduced when the carrier frequency is increased.

| Wiring Distance | Up to $\mathbf{5 0} \mathbf{m}$ | Up to $\mathbf{1 0 0} \mathbf{m}$ | Greater than $\mathbf{1 0 0} \mathbf{m}$ |
| :---: | :---: | :---: | :---: |
| Recommended setting value for C6-02 | 1 to F (up to 15 kHz ) | 1 to 2 (up to 5 kHz ), <br> 7 (Swing PWM) | 1 (up to 2 kHz ), 7 (Swing PWM) |

Note: The maximum cable length is 100 m when using OLV/PM (A1-02 $=5$ ) or AOLV/PM (A1-02 $=6$ ).

## ■ d1-01 to d1-17: Frequency Reference 1 to 16 and Jog Frequency Reference

The drive lets the user switch between up to 17 preset frequency references during run (including the Jog reference) through the digital input terminals. The drive uses the acceleration and deceleration times that have been selected when switching between each frequency reference.
The Jog frequency overrides all other frequency references and must be selected by a separate digital input.
The multi-speed references 1,2 , and 3 can be provided by analog inputs.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| d1-01 to d1-16 | Frequency Reference 1 to 16 | 0.00 to $400.00 \mathrm{~Hz}<1><2>$ | $0.00 \mathrm{~Hz}<2>$ |
| d1-17 | Jog Frequency Reference | 0.00 to $400.00 \mathrm{~Hz}<1><2>$ | $6.00 \mathrm{~Hz}<2>$ |

$<1>$ The upper limit is determined by the maximum output frequency (E1-04) and upper limit for the frequency reference (d2-01).
$<2>$ Setting units are determined by parameter o1-03. The default is "Hz" $(\mathrm{ol}-03=0)$ in V/f, V/f w/PG, OLV, CLV, and OLV/PM control modes. The default for AOLV/PM and CLV/PM control modes expresses the frequency reference as a percentage ( $01-03=1$ ).

## Multi-Step Speed Selection

To use several speed references for a multi-step speed sequence, set the H1-DI parameters to $3,4,5$, and 32 . To assign the Jog reference to a digital input, set H1-प्व to 6 .
Notes on using analog inputs as Multi-Speed 1, 2, and 3:

## 4．6 Basic Drive Setup Adjustments

－The first frequency reference（Multi－Speed 1）comes from the source specified in b1－01．When using an analog input terminal to supply the frequency reference，assign the frequency reference source to the control terminals（b1－01＝1）．
－When an analog input is set to＂Auxiliary frequency 1 ＂（ $\mathrm{H} 3-02, \mathrm{H} 2-06$ ，or $\mathrm{H} 2-10=2$ ），the value set to this input will be used as the Multi－Step Speed 2 instead of the value set to parameter d1－02．If no analog inputs are set for＂Auxiliary frequency 1 ＂，then d1－02 becomes the reference for Multi－Step Speed 2.
－When an analog input is set to＂Auxiliary frequency 2 ＂（H3－02， $\mathrm{H} 2-06$ ，or $\mathrm{H} 2-10=3$ ），the value set to this input will be used as the Multi－Step Speed 3 instead of the value set to parameter d1－03．If no analog inputs are set for＂Auxiliary frequency 2 ＂，then d1－03 becomes the reference for Multi－Step Speed 3.
Select the different speed references as shown in Table 4．11．Figure 4.20 illustrates the multi－step speed selection．
Table 4．11 Multi－Step Speed Reference and Terminal Switch Combinations

| Reference | Multi－Step Speed H1－ロロ＝ 3 | Multi－Step Speed 2 H1－$\square$＝ 4 | Multi－Step Speed 3 H1－$-\mathrm{D}=5$ | Multi－Step Speed 4 H1－$\square$＝ 32 | Jog Reference H1－ロロ＝ 6 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency Reference 1 （set in b1－01） | OFF | OFF | OFF | OFF | OFF |
| Frequency Reference 2 <br> （d1－02 or input terminal A1，A2，A3） | ON | OFF | OFF | OFF | OFF |
| Frequency Reference 3 <br> （d1－03 or input terminal A1，A2，A3） | OFF | ON | OFF | OFF | OFF |
| Frequency Reference 4 （d1－04） | ON | ON | OFF | OFF | OFF |
| Frequency Reference 5 （d1－05） | OFF | OFF | ON | OFF | OFF |
| Frequency Reference 6 （d1－06） | ON | OFF | ON | OFF | OFF |
| Frequency Reference 7 （d1－07） | OFF | ON | ON | OFF | OFF |

| Jog Frequency Reference（d1－17）${ }^{<1>}$ | － | － | － | － | ON |

$<1>$ The Jog frequency overrides all other frequency references．

Figure 4.20 Preset Reference Timing Diagram

## E1-01: Input Voltage Setting

Adjusts the levels of some protective features of the drive (overvoltage, Stall Prevention, etc.). Set this parameter to the nominal voltage of the AC power supply.
NOTICE: Set parameter E1-01 to match the input voltage of the drive. Drive input voltage (not motor voltage) must be set in E1-01 for the protective features to function properly. Failure to set the correct drive input voltage will result in improper drive operation.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| E1-01 | Input Voltage Setting | 155 to $255 \mathrm{~V}<1>$ | $230 \mathrm{~V}<1>$ |

$<1>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.

## E1-01 Related Values

The input voltage setting determines the overvoltage and undervoltage detection levels, the operation levels of the braking transistor, the KEB function, and the overvoltage suppression function.

| Voltage | Setting Value of E1-01 | (Approximate Values) |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Uv Detection Level <br> (L2-05) | Desired DC Bus Voltage <br> during KEB (L2-11) | ov Suppression / <br> Stall Prevention Level <br> (L3-17) |
| 200 V Class | All settings | 190 V | 260 V | 375 V |
| 400 V Class | setting $\geq 400 \mathrm{~V}$ | 380 V | 500 V | 750 V |
|  | setting $<400 \mathrm{~V}$ | 350 V | 460 V | 750 V |
| 600 V Class | All settings | 475 V | 635 V | 930 V |

Note: The braking transistor operation levels are valid for the drive internal braking transistor. When using an external CDBR braking chopper, refer to the instruction manual of that unit.

## V/f Pattern Settings (E1-03)

The drive uses a V/f pattern to adjust the output voltage relative to the frequency reference. There are 15 different predefined V/f patterns (setting 0 to E ) from which to select, each with varying voltage profiles, saturation levels (frequency at which maximum voltage is reached), and maximum frequencies. Additionally, one custom V/f pattern is available (setting F) that requires the user to create the pattern using parameters E1-04 through E1-10.

### 4.6 Basic Drive Setup Adjustments

## E1-03: V/f Pattern Selection

Selects the V/f pattern for the drive and motor from 15 predefined patterns or creates a custom V/f pattern.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| E1-03 | V/f Pattern Selection | 0 to F <1> | $\mathrm{F}<2>$ |

$<1>$ Settings 0 through E are not available when $\mathrm{A} 1-02=2,3,5,6$, or 7 .
$<2>$ Parameter is not reset to the default value when the drive is initialized using A1-03.

## Setting a Predefined V/f Pattern (Setting 0 to E)

Choose the V/f pattern that best meets the application demands from the table below. These settings are available only in V/f Control modes. Set the correct value to E1-03. Parameters E1-04 to E1-13 can only be monitored, not changed.

Note: 1. Setting an improper V/f pattern may result in low motor torque or increased current due to overexcitation.
2. Drive initialization does not reset parameter E1-03.

Table 4.12 Predefined V/f Patterns

| Setting | Specification | Characteristic | Application |
| :---: | :---: | :---: | :---: |
| 0 | 50 Hz | Constant torque | For general purpose applications. Torque remains constant regardless of changes to speed. |
| 1 | 60 Hz |  |  |
| 2 | 60 Hz (with 50 Hz base) |  |  |
| 3 | 72 Hz (with 60 Hz base) |  |  |
| 4 | 50 Hz , Heavy Duty 2 | Variable torque | For fans, pumps, and other applications where the required torque changes as a function of the speed. |
| 5 | 50 Hz , Heavy Duty 1 |  |  |
| 6 | 50 Hz , Heavy Duty 1 |  |  |
| 7 | 50 Hz , Heavy Duty 2 |  |  |
| 8 | 50 Hz , mid starting torque | High starting torque | Select high starting torque when: <br> - Wiring between the drive and motor exceeds 150 m . <br> - A large amount of starting torque is required. <br> - An AC reactor is installed. |
| 9 | 50 Hz , high starting torque |  |  |
| A | 60 Hz , mid starting torque |  |  |
| B | 60 Hz , high starting torque |  |  |
| C | 90 Hz (with 60 Hz base) | Constant output | Output voltage is constant when operating at greater than 60 Hz . |
| D | 120 Hz (with 60 Hz base) |  |  |
| E | 180 Hz (with 60 Hz base) |  |  |
| $\underset{\text { ¢ }}{\text { F }}$ | 60 Hz | Constant torque | For general purpose applications. Torque remains constant regardless of changes to speed. |

$<1>$ Setting F enables a custom V/f pattern by changing parameters E1-04 to E1-13. When the drive is shipped, the default values for parameters E1-04 to E1-13 are the same as those of setting 1 .
The following tables show details on predefined $\mathrm{V} / \mathrm{f}$ patterns.

## Predefined V/f Patterns for models CIMR-AD2A0004 to 2A0021, CIMR-AD4A0002 to 4A0011, and CIMR-AD5A0003 to 5A0009

The values in the following graphs are specific to 200 V class drives. Double the values for 400 V class drives. Multiply the values by 2.875 for 600 V drives.

## Setting a Custom V/f Pattern (Setting F: Default)

Setting parameter E1-03 to F allows the user to set up a custom V/f pattern by changing parameters E1-04 to E1-13.
When initialized, the default values for parameters E1-04 to E1-13 will be equal to Predefined V/f pattern 1.

## V/f Pattern Settings E1-04 to E1-13

If E1-03 is set to a preset $\mathrm{V} / \mathrm{f}$ pattern (i.e., a value other than F ), the user can monitor the $\mathrm{V} / \mathrm{f}$ pattern in parameters E1-04 through E1-13. To create a new V/f pattern, set E1-03 to F. Refer to V/f Pattern on page 108 for an example custom V/f pattern.

Note: Certain E1- $\square \square$ parameters might not be visible depending on the control mode. Refer to Parameter List on page 187 for details.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| E1-04 | Maximum Output Frequency | 40.0 to 400.0 Hz | $<1><2>$ |
| E1-05 | Maximum Voltage | 0.0 to $255.0 \mathrm{~V}<3>$ | $<1>$ |

### 4.6 Basic Drive Setup Adjustments

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| E1-06 | Base Frequency | 0.0 to $[$ E1-04] | $<1><2>$ |
| E1-07 | Middle Output Frequency | 0.0 to $[$ E1-04] | $<1>$ |
| E1-08 | Middle Output Frequency Voltage | 0.0 to $255.0 \mathrm{~V}{ }^{<3>}$ | $<1>$ |
| E1-09 | Minimum Output Frequency | 0.0 to $[$ E1-04] | $<1><2>$ |
| E1-10 | Minimum Output Frequency Voltage | 0.0 to $255.0 \mathrm{~V}<3>$ | $<1>$ |
| E1-11 | Middle Output Frequency 2 | 0.0 to $[\mathrm{E} 1-04]$ | $0.0 \mathrm{~Hz}<5>$ |
| E1-12 | Middle Output Frequency Voltage 2 | 0.0 to $255.0 \mathrm{~V}<3>$ | $0.0 \mathrm{~V}<4><5>$ |
| E1-13 | Base Voltage | 0.0 to $255.0 \mathrm{~V}<3>$ | $0.0 \mathrm{~V}<4>$ |

$<1>$ Default setting is determined by the control mode.
$<2>$ When using PM motors, the default setting is determined by the motor code set to E5-01.
$<3>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
$<4>$ The drive changes these settings when Auto-Tuning is performed (Rotational Auto-Tuning, Stationary Auto-Tuning 1, 2).
<5> Parameter ignored when E1-11 and E1-12 are set to 0.0.

Figure 4.21 V/f Pattern
Note: 1. The following condition must be true when setting up the V/f pattern: E1-09 $\leq \mathrm{E} 1-07<\mathrm{E} 1-06 \leq \mathrm{E} 1-11 \leq \mathrm{E} 1-04$
2. To make the $\mathrm{V} / \mathrm{f}$ pattern a straight line below E1-06, set E1-09 equal to E1-07. In this case the E1-08 setting is disregarded.
3. E1-03 is unaffected when the drive is initialized, but E1-04 through E1-13 return to their default values.
4. Only use E1-11, E1-12, and E1-13 to fine-tune the V/f pattern in the constant output range. These parameters rarely need to be changed.

## E2-01: Motor Rated Current

Provides motor control, protects the motor, and calculates torque limits. Set E2-01 to the full load amps (FLA) stamped on the motor nameplate. If Auto-Tuning completes successfully, the value entered to T1-04 will automatically be saved to E2-01.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| E2-01 | Motor Rated Current | $10 \%$ to $200 \%$ of the drive <br> rated current | Determined by <br> C6-01 and o2-04 |

Note: 1. The number of decimal places in the parameter value depends on the drive model and the ND/HD selection in parameter C6-01. This value has two decimal places $(0.01 \mathrm{~A})$ if the drive is set for a maximum applicable motor capacity up to and including 11 kW , and one decimal place ( 0.1 A ) if the maximum applicable motor capacity is higher than 11 kW . Refer to Power Ratings on page 173.
2. An oPE02 error will occur if the motor rated current in E2-01 is set lower than the motor no-load current in E2-03. Set E2-03 correctly to prevent this error.

## H1-01 to H1-08: Functions for Terminals S1 to S8

These parameters assign functions to the multi-function digital inputs. The various functions and settings are listed in Table 4.25 .

| No. | Parameter Name | Setting <br> Range | Default |
| :---: | :--- | :--- | :--- |
| H1-01 | Multi-Function Digital Input Terminal S1 Function Selection | 1 to 9 F | $40(\mathrm{~F})^{<1>}:$ Forward Run Command (2-Wire sequence) |
| H1-02 | Multi-Function Digital Input Terminal S2 Function Selection | 1 to 9 F | $41(\mathrm{~F})^{<1>}:$ Reverse Run Command (2-Wire sequence) |
| H1-03 | Multi-Function Digital Input Terminal S3 Function Selection | 0 to 9 F | 24 : External Fault |
| H1-04 | Multi-Function Digital Input Terminal S4 Function Selection | 0 to 9 F | $14:$ Fault Reset |
| H1-05 | Multi-Function Digital Input Terminal S5 Function Selection | 0 to 9 F | $3(0)^{<1>}:$ Multi-Step Speed Reference 1 |
| H1-06 | Multi-Function Digital Input Terminal S6 Function Selection | 0 to 9 F | $4(3)^{<1>}:$ Multi-Step Speed Reference 2 |
| H1-07 | Multi-Function Digital Input Terminal S7 Function Selection | 0 to 9 F | $6(4)^{<1>}:$ Jog Reference Selection |
| H1-08 | Multi-Function Digital Input Terminal S8 Function Selection | 0 to 9F | $8:$ External Baseblock Command |

$<1>$ Number appearing in parenthesis is the default value after performing a 3-Wire initialization.
Table 4.25 Multi-Function Digital Input Terminal Settings

| Setting | Function | Page | Setting | Function | Page |

### 4.6 Basic Drive Setup Adjustments

## Setting 0: 3-Wire Sequence

The digital input programmed for 3-Wire control becomes the forward/reverse directional input, S 1 becomes the Run command input, and S2 becomes the Stop command input.
The drive starts the motor when the input S 1 set for the Run command closes for longer than 2 ms . The drive stops the operation when the Stop input S 2 releases for 2 ms . When the digital input programmed for a forward/reverse operation is open, the drive is set for forward operation. When the digital input is closed, the drive is set for reverse operation.

Note: Input the Run and Stop commands via S1 and S2 when selecting a 3-Wire sequence.

Figure 4.22 3-Wire Sequence Wiring Diagram

Figure 4.23 3-Wire Sequence
Note: 1. The Run command must be closed for more than 2 ms .
2. If the Run command is active at power up and b1-17 = 0 (Run command at power up not accepted), the Run LED will flash to indicate that protective functions are operating. If required by the application, set b1-17 to 1 to automatically issue the Run command upon drive power up.
WARNING! Sudden Movement Hazard. Ensure start/stop and safety circuits are wired properly and in the correct state before applying power to the drive. Failure to comply could result in death or serious injury from moving equipment.

WARNING! Sudden Movement Hazard. The drive may start unexpectedly in reverse direction after power up if it is wired for 3-Wire sequence but set up for 2-Wire sequence (default). Make sure b1-17 is set to "0" (drive does not accept a Run command active at power up). When initializing the drive use 3-Wire initialization. Failure to comply could result in death or serious injury from moving equipment.

## H2-01 to H2-03: Terminal M1-M2, M3-M4, and M5-M6 Function Selection

The drive has three multi-function output terminals. Table 4.26 lists the functions available for theses terminals using H2-01, H2-02, and H2-03.

| No. | Parameter Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H2-01 | Terminal M1-M2 Function Selection (relay) | 0 to 192 | 0 : During run |
| H2-02 | Terminal M3-M4 Function Selection (relay) | 0 to 192 | 1: Zero Speed |
| H2-03 | Terminal M5-M6 Function Selection (relay) | 0 to 192 | 2: Speed agree 1 |

Table 4.26 Multi-Function Digital Output Terminal Settings

| Setting | Function | Page | Setting | Function | Page |

## Setting 2: Speed Agree 1 ( $\mathrm{fref}_{\text {ref }} / \mathrm{f}_{\text {out }}$ Agree 1)

Closes when the actual output frequency or motor speed (CLV, CLV/PM) is within the Speed Agree Width (L4-02) of the current frequency reference regardless of the direction.

| Status | Description |
| :---: | :--- |
| Open | Output frequency or motor speed does not match the frequency reference while the drive is running. |
| Closed | Output frequency or motor speed is within the range of frequency reference $\pm \mathrm{L} 4-02$. |

Note: Detection works in forward and reverse.

Figure 4.24 Speed Agree 1 Time Chart

## Setting 3: User-Set Speed Agree 1 ( $\mathrm{f}_{\text {ref }} / \mathrm{f}_{\text {set }}$ Agree 1)

Closes when the actual output frequency or motor speed (CLV, CLV/PM) and the frequency reference are within the speed agree width (L4-02) of the programmed speed agree level (L4-01).

### 4.6 Basic Drive Setup Adjustments

| Status | Description |
| :---: | :--- |
| Open | Output frequency or motor speed and frequency reference are not both within the range of L4-01 $\pm \mathrm{L} 4-02$. |
| Closed | Output frequency or motor speed and the frequency reference are both within the range of L4-01 $\pm \mathrm{L} 4-02$. |

Note: Frequency detection works in forward and reverse. The value of L4-01 is used as the detection level for both directions.

Figure 4.25 User Set Speed Agree 1 Time Chart

## H3-01: Terminal A1 Signal Level Selection

Selects the input signal level for analog input A1.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-01 | Terminal A1 Signal Level Selection | 0 to 1 | 0 |

## Setting 0: $\mathbf{0}$ to $\mathbf{1 0 ~ V d c ~}$

The input level is 0 to 10 Vdc . The minimum input level is limited to $0 \%$, so that a negative input signal due to gain and bias settings will be read as $0 \%$.

## Setting 1: -10 to $\mathbf{1 0 ~ V d c}$

The input level is -10 to 10 Vdc . If the resulting voltage is negative after being adjusted by gain and bias settings, then the motor will rotate in reverse.

## H3-02: Terminal A1 Function Selection

Selects the input signal level for analog input A3.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-02 | Terminal A1 Function Selection | 0 to 31 | 0 |

## H3-03, H3-04: Terminal A1 Gain and Bias Settings

Parameter $\mathrm{H} 3-03$ sets the level of the selected input value that is equal to 10 Vdc input at terminal A 1 (gain). Parameter H3-04 sets the level of the selected input value that is equal to 0 V input at terminal A1 (bias).
Use both parameters to adjust the characteristics of the analog input signal to terminal A1.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-03 | Terminal A1 Gain Setting | -999.9 to $999.9 \%$ | $100.0 \%$ |
| H3-04 | Terminal A1 Bias Setting | -999.9 to $999.9 \%$ | $0.0 \%$ |

## Setting Examples

- Gain H3-03 $=200 \%$, bias H3-04 $=0$, terminal A1 as frequency reference input $(\mathrm{H} 3-02=0)$ :

A 10 Vdc input is equivalent to a $200 \%$ frequency reference and 5 Vdc is equivalent to a $100 \%$ frequency reference. Since the drive output is limited by the maximum frequency parameter (E1-04), the frequency reference will be equal to E1-04 above 5 Vdc .

Figure 4.26 Frequency Reference Setting by Analog Input with Increased Gain

- Gain H3-03 $=100 \%$, bias H3-04 $=-25 \%$, terminal A1 as frequency reference input:

An input of 0 Vdc will be equivalent to a $-25 \%$ frequency reference.
When parameter $\mathrm{H} 3-01=0$, the frequency reference is $0 \%$ between 0 and 2 Vdc input.
When parameter $\mathrm{H} 3-01=1$, the motor will rotate in reverse between -10 and 2 Vdc input.

Figure 4.27 Frequency Reference Setting by Analog Input with Negative Bias

## H3-05: Terminal A3 Signal Level Selection

Determines the function assigned to analog input terminal A3.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-05 | Terminal A3 Signal Level Selection | 0,1 | 0 |

## Setting 0: 0 to $\mathbf{1 0 ~ V d c ~}$

The input level is 0 to 10 Vdc . See the explanation provided for $\mathrm{H} 3-01$. Refer to Setting 0: 0 to 10 Vdc on page 112.

## Setting 1: -10 to 10 Vdc

The input level is -10 to 10 Vdc . See the explanation provided for H3-01. Refer to Setting 1: -10 to 10 Vdc on page 112.

## H3-06: Terminal A3 Function Selection

Determines the function assigned to analog input terminal A3.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-06 | Terminal A3 Function Selection | 0 to 31 | 2 |

## H3-07, H3-08: Terminal A3 Gain and Bias Setting

Parameter H3-07 sets the level of the selected input value that is equal to 10 Vdc input at terminal A3 (gain).
Parameter $\mathrm{H} 3-08$ sets the level of the selected input value that is equal to 0 V input at terminal A3 (bias).

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-07 | Terminal A3 Gain Setting | -999.9 to $999.9 \%$ | $100.0 \%$ |
| H3-08 | Terminal A3 Bias Setting | -999.9 to $999.9 \%$ | $0.0 \%$ |

## H3-09: Terminal A2 Signal Level Selection

Selects the input signal level for analog input A2. Set DIP switch S1 on the terminal board accordingly for a voltage input or current input.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-09 | Terminal A2 Signal Level Selection | 0 to 3 | 2 |

## Setting 0: $\mathbf{0}$ to $\mathbf{1 0 ~ V d c ~}$

The input level is 0 to 10 Vdc. Refer to Setting 0: 0 to 10 Vdc on page 112.

## Setting 1: -10 to 10 Vdc

The input level is -10 to 10 Vdc . Refer to Setting 1: -10 to 10 Vdc on page 112.

## Setting 2: $\mathbf{4}$ to $\mathbf{2 0 m A}$ Current Input

The input level is 4 to 20 mA . Negative input values by negative bias or gain settings will be limited to $0 \%$.

## Setting 3: $\mathbf{0}$ to $\mathbf{2 0 ~ m A ~ C u r r e n t ~ I n p u t ~}$

The input level is 0 to 20 mA . Negative input values by negative bias or gain settings will be limited to $0 \%$.

## H3-10: Terminal A2 Function Selection

Determines the function assigned to analog input terminal A2.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H3-10 | Terminal A2 Function Selection | 0 to 31 | 0 |

## H3-11, H3-12: Terminal A2 Gain and Bias Setting

Parameter H3-11 sets the level of the input value selected that is equal to 10 Vdc input or 20 mA input to terminal A2.
Parameter H3-12 sets the level of the input value selected that is equal to $0 \mathrm{~V}, 4 \mathrm{~mA}$ or 0 mA input at terminal A2.
Use both parameters to adjust the characteristics of the analog input signal to terminal A2. The setting works in the same way as parameters H3-03 and H3-04 for analog input A1.

| No. | Name | Setting Range | Default |
| :---: | :--- | :---: | :---: |
| H3-11 | Terminal A2 Gain Setting | -999.9 to $999.9 \%$ | $100.0 \%$ |
| H3-12 | Terminal A2 Bias Setting | -999.9 to $999.9 \%$ | $0.0 \%$ |

## H4-01, H4-04: Multi-Function Analog Output Terminal FM, AM Monitor Selection

Sets the desired drive monitor parameter UD-D to output as an analog value via terminal FM and AM. Refer to U1: Operation Status Monitors on page 242 for a list of all monitors. The "Analog Output Level" column indicates whether a monitor can be used for analog output.
Example: Enter "103" for U1-03.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H4-01 | Multi-Function Analog Output Terminal FM Monitor Selection | 000 to 999 | 102 |
| H4-04 | Multi-Function Analog Output Terminal AM Monitor Selection | 000 to 999 | 103 |

A setting of 031 or 000 applies no drive monitor to the analog output. With this setting, terminal functions as well as FM and AM output levels can be set by a PLC via a communication option or MEMOBUS/Modbus (through mode).

## H4-02, H4-03: Multi-Function Analog Output Terminal FM Gain and Bias H4-05, H4-06: Multi-Function Analog Output Terminal AM Gain and Bias

Parameters H4-02 and H4-05 set the terminal FM and AM output signal level when the value of the selected monitor is at $100 \%$. Parameters H4-03 and H4-06 set the terminal FM and AM output signal level when the value of the selected monitor is at $0 \%$. Both are set as a percentage, where $100 \%$ equals 10 Vdc or 20 mA analog output and $0 \%$ equals 0 V or 4 mA . The output voltage of both terminals is limited to $+/-10 \mathrm{Vdc}$.
The output signal range can be selected between 0 to +10 Vdc or -10 to +10 Vdc , or 4 to 20 mA using parameter $\mathrm{H} 4-07$ and H4-08. Figure 4.28 illustrates how gain and bias settings work.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H4-02 | Multi-Function Analog Output Terminal FM Gain | -999.9 to $999.9 \%$ | $100.0 \%$ |
| H4-03 | Multi-Function Analog Output Terminal FM Bias | -999.9 to $999.9 \%$ | $0.0 \%$ |
| H4-05 | Multi-Function Analog Output Terminal AM Gain | -999.9 to $999.9 \%$ | $50.0 \%$ |
| H4-06 | Multi-Function Analog Output Terminal AM Bias | -999.9 to $999.9 \%$ | $0.0 \%$ |

## Using Gain and Bias to Adjust Output Signal Level

When viewing a gain setting parameter ( $\mathrm{H} 4-02$ or $\mathrm{H} 4-05$ ) on the digital operator, the analog output will supply a voltage signal equal to $100 \%$ of the monitor value (including changes made from bias and gain settings). When viewing a bias setting parameter (H4-03 or H4-06), the analog output voltage will supply a signal equal to $0 \%$ monitor value.
Example 1: Set H4-02 to $50 \%$ for an output signal of 5 V at terminal FM when the monitored value is at $100 \%$.
Example 2: Set $\mathrm{H} 4-02$ to $150 \%$ for an output signal of 10 V at terminal FM when the monitored value is at $76.7 \%$.

Figure 4.28 Analog Output Gain and Bias Setting Example 1 and 2
Example 3: Set H4-03 to $30 \%$ for an output signal of 3 V at terminal FM when the monitored value is at $0 \%$.

Figure 4.29 Analog Output Gain and Bias Setting Example 3

## H4-07, H4-08: Multi-Function Analog Output Terminal FM, AM Signal Level Selection

Sets the voltage output level of $U$ parameter (monitor parameter) data to terminal FM and terminal AM using parameters H4-07 and H4-08.
Set jumper S5 on the terminal board accordingly when changing these parameters. Refer to Terminal AM/FM Signal Selection on page 72 for details on setting S5.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| H4-07 | Multi-Function Analog Output Terminal FM <br> Signal Level Selection | 0 to 2 | 0 |
| H4-08 | Multi-Function Analog Output Terminal AM <br> Signal Level Selection | 0 to 2 | 0 |

Setting 0: 0 to 10 V
Setting 1: -10 V to 10 V
Setting 2: $\mathbf{4}$ to 20 mA

## - L3-01: Stall Prevention Selection during Acceleration

Stall Prevention during acceleration prevents tripping with overcurrent (oC), motor overload (oL1), or drive overload (oL2) faults common when accelerating with heavy loads.
L3-01 determines the type of Stall prevention the drive should use during acceleration.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| L3-01 | Stall Prevention Selection during Acceleration | 0 to $2^{<1>}$ | 1 |

$<1>$ Setting 2 is not available for OLV/PM.

## Setting 0: Disabled

No Stall Prevention is provided. If the acceleration time is too short, the drive may not be able to get the motor up to speed fast enough, causing an overload fault.

## Setting 1: Enabled

Enables Stall Prevention during acceleration. Operation varies depending on the control mode.

- V/f Control, V/f Control with PG, and Open Loop Vector Control:

Acceleration is reduced when the output current value exceeds $85 \%$ of the level set to parameter L3-02 for a longer than the time set to L3-27. The acceleration stops when the current exceeds L3-02. Acceleration continues when the current falls below L3-02 for longer than the time set to L3-27.
The Stall Prevention level is automatically reduced in the constant power range. Refer to L3-03: Stall Prevention Limit during Acceleration on page 117.

Figure 4.30 Stall Prevention During Acceleration for Induction Motors

- Open Loop Vector Control for PM:

Acceleration stops when the output current reaches the level set to parameter L3-02. When the time set to parameter L3-27 passes, the drive decelerates using the deceleration time set to L3-22. Deceleration stops when the current falls below $85 \%$ of L3-02,. The drive will attempt to reaccelerate after the time set to L3-27.

Figure 4.31 Stall Prevention During Acceleration for Permanent Magnet Motors
Note: PM motor control modes are not available on 600 V class drives, CIMR-A $\square$ 5 $\square \square \square \square \square \square$.

## Setting 2: Intelligent Stall Prevention

The drive disregards the selected acceleration time and attempts to accelerate in the minimum time. The acceleration rate is adjusted so the current does not exceed the value set to parameter L3-02.

## ■ L3-02: Stall Prevention Level during Acceleration

Sets the output current level at which the Stall Prevention during acceleration is activated.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| L3-02 | Stall Prevention Level during Acceleration | 0 to $150 \%<1>$ | $<1>$ |

$<1>$ The upper limit and default value is determined by the duty rating and the carrier frequency derating selection (C6-01 and L8-38 respectively).

- Lower L3-02 if stalling occurs when using a motor that is relatively small compared to the drive.
- Also set parameter L3-03 when operating the motor in the constant power range.

## ■ L3-03: Stall Prevention Limit during Acceleration

The Stall Prevention level is automatically reduced when the motor is operated in the constant power range. L3-03 sets the lower limit for this reduction as a percentage of the drive rated current.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| L3-03 | Stall Prevention Limit during Acceleration | 0 to $100 \%$ | $50 \%$ |

Figure 4.32 Stall Prevention Level and Limit During Acceleration

### 4.6 Basic Drive Setup Adjustments

## L3-04: Stall Prevention Selection during Deceleration

Stall Prevention during deceleration controls the deceleration based on the DC bus voltage and prevents an overvoltage fault caused by high inertia or rapid deceleration.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| L3-04 | Stall Prevention Selection During Deceleration | 0 to $5^{<1><2>}$ | 1 |

$<1>$ Settings 3 through 5 are not available in OLV/PM. Settings 2 through 5 are not available in AOLV/PM and CLV/PM.
$<2>$ Setting 3 is not available for models CIMR-A $\square 4$ A0930 and 4A1200.

## Setting 0: Disabled

The drive decelerates according to the set deceleration time. With high inertia loads or rapid deceleration, an overvoltage fault may occur. If an overvoltage fault occurs, use dynamic braking options or switch to another L3-04 selection.

## Setting 1: General-purpose Stall Prevention

The drive tries to decelerate within the set deceleration time. The drive pauses deceleration when the DC bus voltage exceeds the Stall Prevention level and then continues deceleration when the DC bus voltage drops below that level. Stall Prevention may be triggered repeatedly to avoid an overvoltage fault. The DC bus voltage level for Stall Prevention depends on the input voltage setting E1-01.

| Drive Input Voltage | Stall Prevention Level during Deceleration |
| :---: | :---: |
| 200 V Class | 377 Vdc |
| 400 V Class | 754 Vdc |
| 600 V Class | 1084 Vdc |

Note: 1. Do not use this setting in combination with a Dynamic Braking Resistor or other dynamic braking options. If Stall Prevention during deceleration is enabled, it will be triggered before the braking resistor option can operate.
2. This method may lengthen the total deceleration time compared to the set value. If this is not appropriate for the application consider using a dynamic braking option.
Figure 4.33 illustrates the function of Stall Prevention during deceleration.

Figure 4.33 Stall Prevention During Deceleration

## Setting 2: Intelligent Stall Prevention

The drive adjusts the deceleration rate so the DC bus voltage is kept at the level set to parameter L3-17. This produces the shortest possible deceleration time while protecting the motor from stalling. The selected deceleration time is disregarded and the achievable deceleration time cannot be smaller than $1 / 10$ of the set deceleration time.

This function uses the following parameters for adjusting the deceleration rate:

- DC bus voltage gain (L3-20)
- Deceleration rate calculations gain (L3-21)
- Inertia calculations for motor acceleration time (L3-24)
- Load inertia ratio (L3-25)

Note: The deceleration time is not constant. Do not use Intelligent Stall Prevention in applications where stopping accuracy is a concern. Use dynamic braking options instead.

## Setting 3: Stall Prevention with dynamic braking option

Enables the Stall Prevention function while using a dynamic braking resistor. Overvoltage problems in the DC bus can occur if Stall Prevention during deceleration is disabled (L3-04) in OLV and a dynamic braking option is installed. Set L3-04 to 3 to remedy this situation.

## Setting 4: Overexcitation Deceleration 1

Overexcitation Deceleration 1 (increasing the motor flux) is faster than deceleration with no Stall Prevention (L3-04 = 0). Setting 4 changes the selected decel time and functions to provide protection from an overvoltage trip.

## Setting 5: Overexcitation Deceleration 2

Overexcitation Deceleration 2 slows down the motor while trying to maintain the DC bus voltage at the level set to parameter L3-17. This function shortens the achievable deceleration time more than by using Overexcitation Deceleration 1. Setting 5 will shorten/lengthen the decel time to maintain the L3-17 bus level.

## L3-05: Stall Prevention Selection during Run

Determines how Stall Prevention works during Run. Stall Prevention during run prevents the motor from stalling by automatically reducing the speed when a transient overload occurs while the motor is running at constant speed.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| L3-05 | Stall Prevention Selection During Run | 0 to 2 | 1 |

Note: 1. This parameter is available in $\mathrm{V} / \mathrm{f}, \mathrm{V} / \mathrm{f} \mathrm{w} / \mathrm{PG}$, and OLV/PM.
2. Stall Prevention during run is disabled when the output frequency is 6 Hz or lower regardless of the L3-05 and L3-06 settings.

## Setting 0: Disabled

Drive runs at the set frequency reference. A heavy load may cause the motor to stall and trip the drive with an oC or oL fault.

## Setting 1: Decelerate using C1-02

If the current exceeds the Stall Prevention level set in parameter L3-06, the drive will decelerate at decel time 1 (C1-02). When the current level drops below the value of L3-06 minus $2 \%$ for 100 ms , the drive accelerates back to the frequency reference at the active acceleration time.

## Setting 2: Decelerate using C1-04

Same as setting 1 except the drive decelerates at decel time 2 (C1-04).

## - L3-06: Stall Prevention Level during Run

Sets the current level to trigger Stall Prevention during run. Depending on the setting of parameter L3-23, the level is automatically reduced in the constant power range (speed beyond base speed).
The Stall Prevention level can be adjusted using an analog input.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| L3-06 | Stall Prevention Level During Run | 30 to $150<1>$ | $<1>$ |

$<1>$ The upper limit and default for this setting is determined by C6-01 and L8-38.
■ L7-01 to L7-04: Torque Limits
These parameters set the torque limits in each operation mode.

| No. | Name | Setting Range | Default |
| :---: | :---: | :---: | :---: |
| L7-01 | Forward Torque Limit | 0 to $300 \%$ | $200 \%$ |
| L7-02 | Reverse Torque Limit | 0 to $300 \%$ | $200 \%$ |
| L7-03 | Forward Regenerative Torque Limit | 0 to $300 \%$ | $200 \%$ |
| L7-04 | Reverse Regenerative Torque Limit | 0 to $300 \%$ | $200 \%$ |

Note: If the multi-function analog input is programmed for " 10 : Forward torque limit", " 11 : Reverse torque limit", " 12 : Regenerative torque limit", or " 15 : General torque limit", the drive uses the lowest value from L7-01 through L7-04, or analog input torque limit.

### 4.6 Basic Drive Setup Adjustments

Figure 4.34 Torque Limit Parameters and Analog Input Settings

### 4.7 Auto-Tuning

## Types of Auto-Tuning

The drive offers different types of Auto-Tuning for induction motors and permanent magnet motors. The type of Auto-Tuning used differs further based on the control mode and other operating conditions. Refer to the tables below to select the type of Auto-Tuning that bests suits the application. Refer to Start-Up Flowcharts on page 85 for directions on executing AutoTuning.

Note: The drive will only show Auto-Tuning parameters that are valid for the control mode that has been set in A1-02. If the control mode is for an induction motor, the Auto-Tuning parameters for PM motors will not be available. If the control mode is for a PM motor, the Auto-Tuning parameters for induction motors will not be available. Inertia Tuning and ASR Gain Tuning parameters and setting options will be visible only when the drive is set for operation with CLV or CLV/PM.

## Auto-Tuning for Induction Motors

This feature automatically sets the V/f pattern and motor parameters E1-DD and E2-DD (E3-DC, E4-DC for motor 2) for an induction motor. Additionally, the feature also sets some F1- $\square \square$ parameters for speed feedback detection in Closed Loop Vector.

Table 4.27 Types of Auto-Tuning for Induction Motors

| Type | Setting | Application Conditions and Benefits | Control Mode |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | V/f | V/f w/PG | OLV | CLV |
| Rotational Auto-Tuning | $\mathrm{T} 1-01=0$ | - Motor can be decoupled from the load and rotate freely while Auto-Tuning is performed. <br> - Motor and load cannot be decoupled but the motor load is below 30\%. <br> - Rotational Auto-Tuning gives the most accurate results, and is recommended if possible. | - | - | YES | YES |
| Stationary Auto-Tuning 1 | $\mathrm{T} 1-01=1$ | - Motor and load cannot be decoupled and the load is higher than $30 \%$. <br> - A motor test report listing motor data is not available. <br> - Automatically calculates motor parameters needed for vector control. | - | - | YES | YES |
| Stationary Auto-Tuning 2 | $\mathrm{T} 1-01=4$ | - Motor and load cannot be decoupled and the load is higher than $30 \%$. <br> - A motor test report is available. Once the no-load current and the rated slip have been entered, the drive calculates and sets all other motor-related parameters. | - | - | YES | YES |
| Stationary Auto-Tuning for Line-to-Line Resistance | $\mathrm{T} 1-01=2$ | - The drive is used in V/f Control and other Auto-Tuning selections are not possible. <br> - Drive and motor capacities differ. <br> - Tunes the drive after the cable between the drive and motor has been replaced with a cable over 50 m long. Assumes Auto-Tuning has already been performed. <br> - Should not be used for any vector control modes unless the motor cable has changed. | YES | YES | YES | YES |
| Rotational Auto-Tuning for V/f Control | $\mathrm{T} 1-01=3$ | - Recommended for applications using Speed Estimation Speed Search or using the Energy Saving function in V/f Control. <br> - Assumes motor can rotate while Auto-Tuning is executed. Increases accuracy for certain functions like torque compensation, slip compensation, Energy Saving, and Speed Search. | YES | YES | - | - |

Table 4.28 lists the data that must be entered for Auto-Tuning. Make sure this data is available before starting Auto-Tuning. The necessary information is usually listed on the motor nameplate or in the motor test report provided by the motor manufacturer. Also refer to pages 87 and 88 for details on Auto-Tuning processes and selections.
compensation, slip compensation, Energy Saving, and Speed Search.

Table 4.28 Auto-Tuning Input Data

| Input Value | Input Parameter | Unit | Tuning Type (T1-01) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

$<1>$ Input data is needed for CLV/PM only.

## Auto-Tuning for Permanent Magnet Motors

Automatically sets the V/f pattern and motor parameters E1-D and E5- $\square \square$ when a PM motor is used. Additionally, the feature also sets some F1-DI parameters for speed feedback detection in Closed Loop Vector.

Table 4.29 Types of Auto-Tuning for Permanent Magnet Motors

| Type | Setting | Application Conditions and Benefits | Control Mode |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | OLV/PM | AOLV/PM | CLV/PM |
| PM Motor Parameter Settings | T2-01 = 0 | - Motor does not rotate during Auto-Tuning. <br> - Motor test report or motor data similar to Table 4.30 are available. | YES | YES | YES |
| PM Stationary AutoTuning | T2-01 = 1 | - A motor test report listing motor data is not available. <br> - Drive automatically calculates and sets motor parameters. | YES | YES | YES |
| PM Stationary AutoTuning for Stator Resistance | T2-01 = 2 | - Useful to tune the drive when the motor data were set up manually or by motor code and the cable is longer than 50 m. <br> - Should also be performed if the cable length has changed after prior tuning. | YES | YES | YES |
| Z Pulse Offset Tuning | T2-01 = 3 | - PG encoder has been replaced. Calculates the Z Pulse offset. <br> - Requires the motor to rotate with no load or very low load. | - | - | YES |
| Back EMF Constant Tuning | T2-01 = 11 | - Use when a motor test is not available. <br> - Tunes the motor induction voltage only. <br> - Should be performed after motor data are set and the encoder offset is adjusted. <br> - The motor must be uncoupled from the mechanical system (remove loads). <br> Note: 1. Setting 11 is valid in drive software versions S1015 and later. <br> 2. Setting 11 is not available in models CIMR-A口4A0930 and 4A1200. | - | - | YES |

Table 4.30 lists the data that must be entered for Auto-Tuning. Make sure the data is available before starting Auto-Tuning. The necessary information is usually listed on the motor nameplate or in the motor test report provided by the motor manufacturer. Also refer to page 89 for details on the Auto-Tuning process and selection.

Table 4.30 Auto-Tuning Input Data

| Input Value | Input Parameter | Unit | Tuning Type (T2-01) |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

$<1>$ Input the motor code when using a Yaskawa motor. Select "FFFF" when using a motor from another manufacturer.
$<2>$ T2-02 is not available.
$<3>$ It is only necessary to input either T2-13 or T2-14. Select one and leave the other empty.
$<4>$ Input data is needed for CLV/PM only.
<5> Setting 11 is valid in drive software versions S1015 and later.
$<6>$ Setting 11 is not available in models CIMR-AD4A0930 and 4A1200.
$<7>$ Dependent upon T2-13 setting.

## Inertia Tuning and Speed Control Loop Auto-Tuning

Inertia Tuning can be performed when the drive is using CLV control for either IM or PM motors. Inertia Tuning automatically calculates load and motor inertia, and optimizes settings related to the KEB Ride-Thru function (KEB 2) and Feed Forward control.
ASR Gain Auto-Tuning performs the same operation as Inertia Tuning, while also optimizing speed control loop settings.
Table 4.31 Inertia and Speed Control Loop Tuning

| Type | Setting |  | Application Conditions and Benefits | Control Mode |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | IM Motor | PM Motor |  | CLV | CLV/PM |
| Inertia Tuning | $\mathrm{T} 1-01=8$ | T2-01 $=8$ | Allows the motor to rotate at a certain speed and applies a test signal. The response to the test signal is analyzed and the necessary adjustments are made to parameters controlling the Feed Forward and KEB Ride-Thru functions (KEB 2, L2-29 = 1). | YES | YES |
| ASR Gain Auto-Tuning | $\mathrm{T} 1-01=9$ | T2-01 $=9$ | Performs the same operation as Inertia Tuning, while also adjusting the ASR gain according to the test signal response. | YES | YES |

Table 4.32 explains the data that must be entered to perform the Inertia Tuning and ASR Gain Auto-Tuning. Refer to Auto-
Tuning for Permanent Magnet Motors on page 122 for details.

Table 4.32 Auto-Tuning Input Data

| Input Value | Input Parameter | Unit | Tuning Type (T1-01 or T2-01) |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | $\stackrel{8}{ } \quad \text { Inertia Tuning }$ | ASR Gain Tuning |
| Test signal frequency | T3-01 | Hz | YES | YES |
| Test signal amplitude | T3-02 | rad | YES | YES |
| Motor inertia | T3-03 | $\mathrm{kgm}^{2}$ | YES | YES |
| System response frequency | T3-04 | Hz | - | YES |

## Auto-Tuning Interruption and Fault Codes

If tuning results are abnormal or the STOP key is pressed before completion, Auto-Tuning will be interrupted and a fault code will appear on the digital operator.

A - During Auto-Tuning
Figure 4.35 Auto-Tuning Aborted Display

## Auto-Tuning Operation Example

The following example demonstrates Rotational Auto-Tuning when using OLV (A1-02 = 2) and CLV (A1-02 = 3).
Selecting the Type of Auto-Tuning

|  | Step |  | Display/Result |
| :---: | :---: | :---: | :---: |
| 1. | Turn on the power to the drive. The initial display appears. | $\rightarrow$ |  |
| 2. | Press $\Lambda$ or until the Auto-Tuning display appears. | $\rightarrow$ |  |
| 3. | Press $\underset{\text { ENTER }}{J}$ to begin setting parameters. | $\rightarrow$ | A.TUNE - PRG Rdy <br> Tuning Mode Sel <br> T1-01= 0 *0* <br> StandardTuning <br> ESC FWD DATA |
| 4. | Press ENTIER ${ }^{\text {d }}$ to display the value for T1-01. $<1>$ | $\rightarrow$ |  |
| 5. | Save the setting by pressing ENTER. | $\rightarrow$ | Entry Accepted |
| 6. | The display automatically returns to the display shown in Step 3. | $\rightarrow$ |  |

$<1>$ T1-00 will appear on the display when one of the multi-function inputs has been set to switch between motor 1 and motor $2(\mathrm{H} 1-\square \square=16)$.

## Enter Data from the Motor Nameplate

After selecting the type of Auto-Tuning, enter the data required from the motor nameplate.
Note: These instructions continue from Step 6 in "Selecting the Type of Auto-Tuning".

| Step |  | Display/Result |  |
| :---: | :---: | :---: | :---: |
| 1. | Press $\triangle$ to access the motor output power parameter T1-02. | $\rightarrow$ |  |
| 2. | Press to view the default setting. | $\rightarrow$ |  |
| 3. | Press left , right, RESED, $\Lambda$, and $\mathbf{V}$ to enter the motor power nameplate data in kW . | $\rightarrow$ | - A.TUNE - PRG Rdy <br> Mtr Rated Power <br> T1-- $=0000.40 \mathrm{NW}$ <br> $(0.00 \sim 650.00)$ <br> "0.75W" <br> $\rightarrow \mathbf{F W D}$ |
| 4. | Press eniter to save the setting. | $\rightarrow$ | Entry Accepted |
| 5. | The display automatically returns to the display in Step 1. | $\rightarrow$ |  |
| 6. | Repeat Steps 1 through 5 to set the following parameters: <br> - T1-03, Motor Rated Voltage <br> - T1-04, Motor Rated Current <br> - T1-05, Motor Base Frequency <br> - T1-06, Number of Motor Poles <br> - T1-07, Motor Base Frequency <br> - T1-09, Motor No-Load Current (Stationary Auto-Tuning 1 or 2 only) <br> - T1-10, Motor Rated Slip (Stationary Auto-Tuning 2 only) | $\rightarrow$ |  |

Note: To execute Stationary Auto-Tuning for line-to-line resistance only, set parameters T1-02 and T1-04.

### 4.7 Auto-Tuning

## Starting Auto-Tuning

WARNING! Sudden Movement Hazard. The drive and motor may start unexpectedly during Auto-Tuning, which could result in death or serious injury. Ensure the area surrounding the drive motor and load are clear before proceeding with Auto-Tuning.

WARNING! Electrical Shock Hazard. High voltage will be supplied to the motor when Stationary Auto-Tuning is performed even with the motor stopped, which could result in death or serious injury. Do not touch the motor until Auto-Tuning has been completed.

NOTICE: Rotational Auto-Tuning will not function properly if a holding brake is engaged on the load. Failure to comply could result in improper operation of the drive. Ensure the motor can freely spin before beginning Auto-Tuning.

Enter the required information from the motor nameplate. Press to proceed to the Auto-Tuning start display.
Note: These instructions continue from Step 6 in "Enter Data from the Motor Nameplate".

| Step |  |  | Display/Result |
| :---: | :---: | :---: | :---: |
| 1. | After entering the data listed on the motor nameplate, press $\lambda$ to confirm. | $\rightarrow$ |  |
| 2. | Press <br> RUN <br> to activate Auto-Tuning. DRV flashes. The drive begins by injecting current into the motor for about 1 min , and then starts to rotate the motor. <br> Note: The first digit on the display indicates which motor is undergoing Auto-Tuning (motor 1 or motor 2). The second digit indicates the type of Auto-Tuning being performed. | $\rightarrow$ |  |
| 3. | Auto-Tuning finishes in approximately one to two minutes. | $\rightarrow$ | - MODE - DRV <br> Tune Snd <br> Encessful <br> FWD बRESEI |

### 4.8 No-Load Operation Test Run

## - No-Load Operation Test Run

This section explains how to operate the drive with the motor decoupled from the load during a test run.

## Before Starting the Motor

Check the following items before operation:

- Ensure the area around the motor is safe.
- Ensure external emergency stop circuitry is working properly and other safety precautions have been taken.

## - During Operation

Check the following items during operation:

- The motor should rotate smoothly (i.e., no abnormal noise or oscillation).
- The motor should accelerate and decelerate smoothly.

## No-Load Operation Instructions

The following example illustrates a test run procedure using the digital operator.
Note: Before starting the motor, set the frequency reference d1-01 to 6 Hz .

|  | Step |  | Display/Result |
| :---: | :---: | :---: | :---: |
| 1. | Turn on the power to the drive. The initial display appears. | $\rightarrow$ |  |
| 2. | $\text { Press } \frac{\frac{10}{R E}}{} \text { to select LOCAL. The LO/RE light will turn on. }$ | $\rightarrow$ |  |
| 3. | Press <br> RUN <br> to give the drive a Run command. RUN will light and the motor will rotate at 6 Hz . | $\rightarrow$ |  |
| 4. | Ensure the motor is rotating in the correct direction and that no faults or alarms occur. | $\rightarrow$ |  |
| 5. | If there is no error in step 4, press $\Lambda$ to increase the frequency reference. Increase the frequency in increments of 10 Hz , verifying smooth operation at all speeds. For each frequency, check the drive output current using monitor U1-03. The current should be well below the motor rated current. | - | - |

### 4.8 No-Load Operation Test Run

### 4.9 Test Run with Load Connected

## - Test Run with the Load Connected

After performing a no-load test run, connect the motor and proceed to run the motor and load together.

## Precautions for Connected Machinery

WARNING! Sudden Movement Hazard. Clear all personnel from the drive, motor, and machine area before applying power. System may start unexpectedly upon application of power, causing death or serious injury.

WARNING! Sudden Movement Hazard. Always check the operation of any fast stop circuits after they are wired. Fast stop circuits are required to provide safe and quick shutdown of the drive. Prepare to initiate an emergency stop during the test run. Operating a drive with untested emergency circuits could result in death or serious injury.

- The motor should come to a complete stop without problems.
- Connect the load and machinery to the motor.
- Fasten all installation screws properly and check that the motor and connected machinery are held in place.

## ■ Checklist Before Operation

- The motor should rotate in the proper direction.
- The motor should accelerate and decelerate smoothly.

## Operating the Motor under Loaded Conditions

Test run the application similarly to the no-load test procedure when connecting the machinery to the motor.

- Monitor U1-03 for overcurrent during operation.
- If the application permits running the load in the reverse direction, change the motor direction and the frequency reference while watching for abnormal motor oscillation or vibration.
- Correct any problems that occur with hunting, oscillation, and other control-related issues.

### 4.10 Test Run Checklist

Review the checklist before performing a test run. Check each item that applies.

| $\square$ | No. | Checklist | Page |
| :---: | :---: | :--- | :---: |
| $\square$ | 1 | Thoroughly read the manual before performing a test run. | - |
| $\square$ | 2 | Turn the power on. | $\mathbf{9 0}$ |
| $\square$ | 3 | Set the voltage for the power supply to E1-01. | $\mathbf{1 0 3}$ |
| $\square$ | 4 | Select the correct duty rating (C6-01) for the application. | - |

Check the items that correspond to the control mode being used.
WARNING! Sudden Movement Hazard. Ensure start/stop and safety circuits are wired properly and in the correct state before energizing the drive. Failure to comply could result in death or serious injury from moving equipment. When programmed for 3-Wire control, a momentary closure on terminal S1 may cause the drive to start.

| $\square$ | No. | Checklist | Page |
| :---: | :---: | :---: | :---: |
| V/f Control (A1-02 = 0 ) and V/f Control with PG (A1-02 = 1) |  |  |  |
| $\square$ | 5 | Select the best V/f pattern according to the application and motor characteristics. | - |
| $\square$ | 6 | Perform Rotational Auto-Tuning for V/f Control if using Energy Saving functions. | 121 |
| V/f Control with PG (A1-02 = 1) |  |  |  |
| $\square$ | 7 | Set up the PG feedback parameters correctly and make sure the encoder pulse counting direction is correct. | - |
| $\square$ | 8 | Set the proportional gain for ASR speed control to C5-01 and the integral time to C5-02. | - |
| Open Loop Vector Control ( $\mathrm{A} 1-02=2$ ) or Closed Loop Vector Control ( $\mathrm{A} 1-02=3$ ) |  |  |  |
| $\square$ | 9 | Decouple motor shafts and machines when performing Rotational Auto-Tuning. | 121 |
| $\square$ | 10 | Set the Auto-Tuning mode to T1-01 (0 for Rotational Auto-Tuning). | 121 |
| $\square$ | 11 | Enter the following data according to the information listed on the motor nameplate: <br> - Motor rated power to T1-02 (kW) <br> - Motor rated voltage to T1-03 (V) <br> - Motor rated current to T1-04 (A) <br> - Motor base frequency to T1-05 (Hz) <br> - Number of motor poles to T1-06 <br> - Motor base speed to T1-07 (r/min) | 121 |
| Closed Loop Vector Control ( $\mathrm{A} 1-02=3$ ) |  |  |  |
| $\square$ | 12 | Set F1-01 and F1-05. | - |
| $\square$ | 13 | Set ASR proportional gain to C5-01 and ASR integral time to C5-02. Perform ASR Tuning if possible. | - |
| Open Loop Vector Control for PM (A1-02 = 5) |  |  |  |
| $\square$ | 14 | Perform Auto-Tuning as described. | 121 |
| Advanced Open Loop Vector Control for PM (A1-02 = 6) |  |  |  |
| $\square$ | 15 | Perform Auto-Tuning as described. | 121 |
| $\square$ | 16 | Set the proportional gain for ASR speed control to C5-01 and the integral time to C5-02. | - |
| Closed Loop Vector Control for PM (A1-02 = 7) |  |  |  |
| $\square$ | 17 | Set PM motor data using E5-पロ parameters. | 121 |
| $\square$ | 18 | Set ASR proportional gain to C5-01 and ASR integral time to C5-02. Perform ASR Tuning if possible. | - |
| $\square$ | 19 | Set F1-01 and F1-05. | - |
| $\square$ | 20 | Set the offset between the rotor magnetic axis and the Z-pulse of the connected encoder to E5-11. | - |
| $\square$ | 21 | The DRV should light after giving a Run command. | - |
| $\square$ | 22 | To give Run command and frequency reference from the digital operator, press "LO/RE" key to set to LOCAL. | 83 |
| $\square$ | 23 | If the motor rotates in the opposite direction during test run, switch two of U/T1, V/T2, W/T3, or change b1-14. | 90 |
| $\square$ | 24 | In accordance with load condition, set Heavy Duty or Normal Duty mode using parameter C6-01. Normal Duty is the default setting. | - |

| $\square$ | No. | Checklist | Page |
| :---: | :---: | :--- | :---: | :---: |
| $\square$ | 25 | Set motor rated current (E2-01, E4-01, E5-03) and motor protection (L1-01) values for motor thermal protection. | - |
| $\square$ | 26 | Set the drive for REMOTE when control circuit terminals provide the Run command and frequency reference. | 83 |
| $\square$ | 27 | If the control circuit terminals should supply the frequency reference, select the correct voltage input signal level <br> (0 to 10 V) or the correct current input signal level (4 to 20 mA or 0 to 20 mA). | 93 |
| $\square$ | 28 | Set the proper voltage to terminals A1 and A3 (-10 to +10 V). | 93 |
| $\square$ | 29 | Set the proper current to terminal A2. (-10 to +10 V, 4 to 20 mA or 0 to 20 mA). | 93 |
| $\square$ | 30 | When current input is used, switch the built-in DIP switch S1 from the V-side to I-side. Set the level for current signal <br> used to H3-09 (set "2" for 4 to 20 mA, or "3" for 0 to 20 mA). | 93 |
| $\square$ | 31 | Set DIP Switch S1 on the drive to "I" when using current input. | - |
| $\square$ | If an analog input supplies the frequency reference, make sure it produces the desired frequency reference. Make the <br> following adjustments if the drive does not operate as expected: <br> Gain adjustment: Set the maximum voltage/current signal and adjust the analog input gain (H3-03 for A1, H3-11 for A2, <br> H3-07 for A3) until the frequency reference value reaches the desired value. <br> Bias adjustment: Set the minimum voltage/current signal and adjust the analog input bias (H3-04 for A1, H3-12 for A2, <br> H3-08 for A3) until the frequency reference value reaches the desired minimum value. | - | - |
| $\square$ | H3 |  |  |
| $\square$ |  |  |  |

### 5.1 Drive Alarms, Faults, and Errors

## Types of Alarms, Faults, and Errors

Check the digital operator for information about possible faults if the drive or motor fails to operate. Refer to Using the Digital Operator on page 78.
If problems occur that are not covered in this manual, contact the nearest Yaskawa representative with the following information:

- Drive model
- Software version
- Date of purchase
- Description of the problem

Table 5.1 contains descriptions of the various types of alarms, faults, and errors that may occur while operating the drive.
Table 5.1 Types of Alarms, Faults, and Errors

| Type | Drive Response |
| :---: | :---: |
| Faults | When the drive detects a fault: <br> - The digital operator displays text indicating the specific fault and the ALM indicator LED remains lit until the fault is reset. <br> - The fault interrupts drive output and the motor coasts to a stop. <br> - Some faults allow the user to select the stopping method when the fault occurs. <br> - Fault output terminals MA-MC will close, and MB-MC will open. <br> The drive will remain inoperable until the fault is cleared. Refer to Fault Reset Methods on page 157. |
| Minor Faults and Alarms | When the drive detects an alarm or a minor fault: <br> - The digital operator displays text indicating the specific alarm or minor fault, and the ALM indicator LED flashes. <br> - The drive continues running the motor, although some alarms allow the user to select a stopping method when the alarm occurs. <br> - A multi-function contact output set to be tripped by a minor fault $(\mathrm{H} 2-\square \square=10)$ closes. If the output is set to be tripped by an alarm, the contact will not close. <br> - The digital operator displays text indicating a specific alarm and the ALM indicator LED flashes. Remove the cause of the problem to reset a minor fault or alarm. |
| Operation Errors | An operation error occurs when parameter settings conflict or do not match hardware settings (such as with an option card). When the drive detects an operation error: <br> - The digital operator displays text indicating the specific error. <br> - Multi-function contact outputs do not operate. <br> The drive will not operate the motor until the error has been reset. Correct the settings that caused the operation error to clear the error. |
| Tuning Errors | Tuning errors occur while performing Auto-Tuning. When the drive detects a tuning error: <br> - The digital operator displays text indicating the specific error. <br> - Multi-function contact outputs do not operate. <br> - Motor coasts to stop. <br> Remove the cause of the error and repeat the Auto-Tuning process. |
| Copy Function Errors | Copy Function Errors occur when using the digital operator or the USB Copy Unit to copy, read, or verify parameter settings. <br> - The digital operator displays text indicating the specific error. <br> - Multi-function contact outputs do not operate. <br> Pressing any key on the digital operator will clear the fault. Investigate the cause of the problem (such as model incompatibility) and try again. |

### 5.2 Fault Detection

## Fault Displays, Causes, and Possible Solutions

Faults are detected for drive protection, and cause the drive to stop while triggering the fault output terminal MA-MB-MC. Remove the cause of the fault and manually clear the fault before attempting to run the drive again.

Table 5.2 Detailed Fault Displays, Causes, and Possible Solutions

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| bol | boL | Braking Transistor Overload Fault |
|  |  | The braking transistor reached its overload level. |
| 8045 | bUS | Option Communication Error |
|  |  | - The connection was lost after establishing initial communication. <br> - Only detected when the run command frequency reference is assigned to an option card. |
| Cause |  | Possible Solution |
| No signal was received from the PLC |  | - Check for faulty wiring |
| Faulty communications wiring or an existing short circuit |  | - Correct the wiring. <br> - Check for disconnected cables and short circuits and repair as needed. |
| Communication data error occurred due to noise |  | - Check the various options available to minimize the effects of noise. <br> - Counteract noise in the control circuit, main circuit, and ground wiring. <br> - Ensure that other equipment such as switches or relays do not cause noise. Use surge absorbers if necessary. <br> - Use only recommended cables or other shielded line. Ground the shield on the controller side or the drive input power side. <br> - Separate all communication wiring from drive power lines. Install an EMC noise filter to the drive power supply input. |
| The option card is damaged |  | Replace the option card if there are no problems with the wiring and the error continues to occur. |
| The option card is not properly connected to the drive |  | - The connector pins on the option card do not line up properly with the connector pins on the drive. <br> - Reinstall the option card. |

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| EF | CF | Control Fault |
|  |  | The torque limit was reached continuously for three seconds or longer while ramping to stop in OLV Control. |

|  | CPF11 to CPF14 CPF16 to CPF19 | Control Circuit Error |
| :---: | :---: | :---: |

| [9F0] | CPF02 | A/D Conversion Error |
| :---: | :---: | :---: |
|  |  | An A/D conversion error or control circuit error occurred. |
| [9403 | CPF03 | Control Board Connection Error |
|  |  | Connection error between the control board and the drive |

## 5．2 Fault Detection

| ［9F－05 | CPF06 | EEPROM Memory Data Error |
| :---: | :---: | :---: |
|  |  | Error in the data saved to EEPROM |
| Cause |  | Possible Solution |
| There is an error in EEPROM control circuit |  | －Turn off the power and check the connection between the control board and the drive． <br> －If the problem continues，replace the control board or the entire drive．Contact Yaskawa or a Yaskawa representative for instructions on replacing the control board． |
| The power supply was switched off while parameters were being saved to the drive |  | Reinitialize the drive using parameter A1－03． |

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| CPFOT | CPF07 | Terminal Board Connection Error |
| CPF召 | CPF08 |  |

|  |  | Data cannot be written to the EEPROM |
| FRn | FAn | Internal Fan Fault |
|  |  | Fan or magnetic contactor failure |
| $F$ ¢й | FbH | Excessive PID Feedback |
|  |  | PID feedback input is greater than the level set to b5－36 for longer than the time set to b5－37．Set b5－12 to 2 or 5 to enable fault detection． |
| Fot | FbL | PID Feedback Loss |
|  |  | This fault occurs when PID feedback loss detection is programmed to trigger a fault $(b 5-12=2)$ and the PID feedback level is below the detection level set to b5－13 for longer than the time set to b5－14． |
| 5.1 | GF | Ground Fault |
|  |  | －A current short to ground exceeded $50 \%$ of rated current on the output side of the drive． <br> －Setting L8－09 to 1 enables ground fault detection． |
| Cause |  | Possible Solution |
| Motor insulation is damaged |  | －Check the insulation resistance of the motor． <br> －Replace the motor． |

### 5.2 Fault Detection

| A damaged motor cable is creating a short circuit | - Check the motor cable. <br> - Remove the short circuit and reapply power to the drive |
| :---: | :---: |
|  | - Check the resistance between the cable and the ground terminal $\Theta$. <br> - Replace the cable. |
| Excessive leakage current at the drive output | - Reduce the carrier frequency. <br> - Reduce the amount of stray capacitance. |
| The drive started to run during a current offset fault or while coasting to a stop | - The set value exceeds the allowable setting range while the drive automatically adjusts the current offset. This only happens when attempting to restart a PM motor that is coasting to stop. <br> - Set b3-01 to 1 to enable Speed Search at Start. <br> - Perform Speed Search 1 or $2(\mathrm{H} 1-\square \square=61$ or 62$)$ via one of the external terminals. <br> Note: Speed Searches 1 and 2 are the same when using OLV/PM. |
| Hardware problem | If the problem continues, replace the control board or the entire drive. Contact Yaskawa or a Yaskawa representative for instructions on replacing the control board. |

| Digital Operator Display | Fault Name |
| :---: | :---: |
|  | Output Phase Loss |
| LF LF | - Phase loss on the output side of the drive. <br> - Setting L8-07 to 1 or 2 enables Phase Loss Detection. |
| Cause | Possible Solution |
| The output cable is disconnected | - Check for wiring errors and properly connect the output cable. <br> - Correct the wiring. |
| The motor winding is damaged | - Check the resistance between motor lines. <br> - Replace the motor if the winding is damaged. |
| The output terminal is loose | - Apply the tightening torque specified in this manual to fasten the terminals. Refer to Wire Gauges and Tightening Torque on page 55 for details. |
| The rated current of the motor being used is less than $5 \%$ of the drive rated current | Check the drive and motor capacities. |
| An output transistor is damaged | If the problem continues, replace the control board or the entire drive. Contact Yaskawa or a Yaskawa representative for instructions on replacing the control board. |
| A single-phase motor is being used | The drive cannot operate a single phase motor. |

| Digital Operator Display |  |
| :--- | :--- |
| LF2 | Output Current Imbalance |
|  | One or more of the phases in the output current are lost. |
| Cause |  |
| Phase loss has occurred on the output side of <br> the drive | - Check for faulty wiring or poor connections on the output side of the drive. <br> - Correct the wiring. |
| Terminal wires are loose on the output side of <br> the drive | Apply the tightening torque specified in this manual to fasten the terminals. Refer to Wire Gauges and <br> Tightening Torque on page 55 for details. |
| The output circuit is damaged | If the problem continues, replace the control board or the entire drive. Contact Yaskawa or a Yaskawa <br> representative for instructions on replacing the control board. |
| Motor impedance or motor phases are uneven | - Measure the line-to-line resistance for each motor phase. Ensure all values match. <br> - Replace the motor. |

$<1>$ Detected in models CIMR-A口4A0903 and 4A1200.

| :--- | :--- | :--- |
| $n 5 E$ | Node Setup Error |  |
|  | A terminal assigned to the node setup function closed during run． |  |
| Cause |  |  |
| The nossible Solution |  |  |
| A Run command was issued while the node <br> setup function was active． | Stop the drive when using the node setup function． |  |

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| OL | oC | Overcurrent |
|  |  | Drive sensors detected an output current greater than the specified overcurrent level． |
| Cause |  | Possible Solution |
| The motor has been damaged due to overheating or the motor insulation is damaged |  | －Check the insulation resistance． <br> －Replace the motor． |
| One of the motor cables has shorted out or there is a grounding problem |  | －Check the motor cables． <br> －Remove the short circuit and reapply power to the drive． |
|  |  | －Check the resistance between the motor cables and the ground terminal $\Theta$ ． <br> －Replace damaged cables． |
| The load is too heavy |  | －Measure the current flowing into the motor． <br> －Replace the drive with a larger capacity drive if the current value exceeds the rated current． <br> －Determine if there is sudden fluctuation in the current level． <br> －Reduce the load to avoid sudden changes in the current level or switch to a larger drive． |
| The acceleration or deceleration times are too short |  | Calculate the torque needed during acceleration relative to the load inertia and the specified acceleration time．If it is not possible to set the proper amount of torque，make the following changes： <br> －Increase the acceleration time（C1－01，C1－03，C1－05，C1－07） <br> －Increase the S－curve characteristics（C2－01 through C2－04） <br> －Increase the capacity of the drive． |
| The drive is attempting to operate a specialized motor or a motor larger than the maximum size allowed |  | －Check the motor capacity． <br> －Ensure that the rated capacity of the drive is greater than or equal to the capacity rating found on the motor nameplate． |
| Magnetic contactor（MC）on the output side of the drive has turned on or off |  | Set up the operation sequence so the MC does not trip while the drive is outputting current． |
| $\mathrm{V} / \mathrm{f}$ setting is not operating as expected |  | －Check the ratios between the voltage and frequency． <br> －Set parameters E1－04 through E1－10 appropriately（E3－04 through E3－10 for motor 2）． <br> －Lower the voltage if it is too high relative to the frequency． |
| Excessive torque compensation |  | －Check the amount of torque compensation． <br> －Reduce the torque compensation gain（C4－01）until there is no speed loss and less current． |
| Drive fails to operate properly due to noise interference |  | －Review the possible solutions provided for handling noise interference． <br> －Review the section on handling noise interference and check the control circuit lines，main circuit lines， and ground wiring． |
| Overexcitation gain is set too high |  | －Check if the fault occurs simultaneously with overexcitation function operation． <br> －Consider motor flux saturation and reduce the value of n3－13（Overexcitation Deceleration Gain）． |
| Run command was applied while motor was coasting |  | －Set b3－01 to 1 to enable Speed Search at Start． <br> －Program the Speed Search command input through one of the multi－function contact input terminals （H1－口ᄆ＝ 61 or 62）． |
| The wrong motor code has been entered for OLV／PM（Yaskawa motors only）or the motor data are wrong |  | －Enter the correct motor code to E5－01． <br> －Set E5－01 to FFFF if using a non－Yaskawa PM motor．Set the correct motor data to the E5－ parameters or perform Auto－Tuning． |
| The motor control method and motor do not match |  | －Check the control mode． <br> －For IM motors，set A1－02 to 0，1，2，or 3 ． <br> －For PM motors，set A1－02 to 5，6，or 7 ． |
| The rated output current of the drive is too small |  | Use a larger drive． |

| :---: | :---: |
|  | Overheat 1 （Heatsink Overheat） |
| －Hi oH1 | The heatsink temperature exceeded the drive overheat level．Overheat level is determined by drive capacity（o2－04）． |
| Cause | Possible Solution |
| Surrounding temperature is too high | －Check the temperature surrounding the drive． <br> －Improve the air circulation within the enclosure panel． <br> －Install a fan or air conditioner to cool the surrounding area． <br> －Remove anything near the drive that might be producing excessive heat． |
| Load is too heavy | －Measure the output current． <br> －Lower the carrier frequency（C6－02）． <br> －Reduce the load． |

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| -H3 | oH3 | Motor Overheat Alarm (PTC Input) |
|  |  | - The motor overheat signal to analog input terminal A1, A2, or A3 exceeded the alarm detection level. <br> - Detection requires setting multi-function analog inputs $\mathrm{H} 3-02, \mathrm{H} 3-06$, or $\mathrm{H} 3-10$ to E . |
| 014 | oH4 | Motor Overheat Fault (PTC Input) |
|  |  | - The motor overheat signal to analog input terminal A1, A2, or A3 exceeded the fault detection level. <br> - Detection requires setting multi-function analog inputs H3-02, H3-06, or H3-10 to E. |
| Cause |  | Possible Solution |
| Motor has overheated |  | - Check the size of the load, the accel/decel times, and the cycle times. <br> - Decrease the load. <br> - Increase the acceleration and deceleration times (C1-01 through C1-08). |
|  |  | - Adjust the preset V/f pattern (E1-04 through E1-10) by reducing E1-08 and E1-10. <br> - Do not set E1-08 and E1-10 too low. This reduces load tolerance at low speeds. |
|  |  | - Check the motor rated current. <br> - Enter the motor rated current to parameter E2-01 as indicated on the motor nameplate. <br> - Ensure the motor cooling system is operating normally. <br> - Repair or replace the motor cooling system. |

| Digital Operator Display |  | Fault Name |
| :---: | :---: | :---: |
| -145 | - ${ }^{\text {5 }}$ | Motor Overheat (NTC Input) |
|  | OHS | The motor temperature exceeded the level set to L1-16 (or L1-18 for motor 2) |
| Cause |  | Possible Solution |
| Motor has overheated |  | - Reduce the load. <br> - Check the ambient temperature. |

$<1>$ Detected in models CIMR-AD4A0903 and 4A1200.

| Digital Operator Display | Fault Name |
| :---: | :---: |
| -1 | Motor Overload |
| - | The electronic motor overload protection tripped |
| Cause | Possible Solution |
| Load is too heavy | Reduce the load. |
| Cycle times are too short during acceleration and deceleration | Increase the acceleration and deceleration times ( $\mathrm{C} 1-01$ through C1-08). |
| A general-purpose motor is driven below the rated speed with a high load | - Reduce the load. <br> - Increase the speed. <br> - If the motor is supposed to operate at low speeds, either increase the motor capacity or use a motor specifically designed to operate in the desired speed range. |
| The output voltage is too high | - Adjust the user-set V/f pattern (E1-04 through E1-10) by reducing E1-08 and E1-10. <br> - Do not set E1-08 and E1-10 too low. This reduces load tolerance at low speeds. |
| The wrong motor rated current is set to E2-01 | - Check the motor-rated current. <br> - Enter the motor rated current to parameter E2-01 as indicated on the motor nameplate. |
| The maximum output frequency is set incorrectly | - Check the rated frequency indicated on the motor nameplate. <br> - Enter the rated frequency to E1-06 (Base Frequency). |
| Multiple motors are running off the same drive | Set L1-01 to 0 to disable the motor protection function and then install a thermal relay to each motor. |
| The electrical thermal protection characteristics and motor overload characteristics do not match | - Check the motor characteristics. <br> - Correct the type of motor protection that has been selected (L1-01). <br> - Install an external thermal relay. |
| The electrical thermal relay is operating at the wrong level | - Check the current rating listed on the motor nameplate. <br> - Check the value set for the motor rated current (E2-01). |
| Motor overheated by overexcitation operation | - Overexcitation increases the motor loss and the motor temperature. Excessive duration of overexcitation may cause motor damage. Prevent excessive overexcitation operation or apply proper cooling to the motor. <br> - Reduce the excitation deceleration gain (n3-13). <br> - Set L3-04 (Stall Prevention during Deceleration) to a value other than 4. |

### 5.2 Fault Detection

| Parameters related to Speed Search are set incorrectly |  | - Check values set to Speed Search related parameters. <br> - Adjust the Speed Search current and Speed Search deceleration times (b3-02 and b3-03 respectively). <br> - After Auto-Tuning, set b3-24 to 1 to enable Speed Estimation Speed Search. |
| :---: | :---: | :---: |
| Output current fluctuation due to input phaseloss |  | Check the power supply for phase loss. |
| Digital Operator Display |  | Fault Name |
| -LJ | oL2 | Drive Overload |
|  |  | The thermal sensor of the drive triggered overload protection. |
| Cause |  | Possible Solution |
| Load is too heavy |  | Reduce the load. |
| Acceleration or deceleration time is too short |  | Increase the settings for the acceleration and deceleration times (C1-01 through C1-08). |
| The output voltage is too high |  | - Adjust the preset V/f pattern (E1-04 through E1-10) by reducing E1-08 and E1-10. <br> - Do not lower E1-08 and E1-10 excessively. This reduces load tolerance at low speeds. |
| Drive capacity is too small |  | Replace the drive with a larger model. |
| Overload occurred when operating at low speeds |  | - Reduce the load when operating at low speeds. <br> - Replace the drive with a model that is one frame size larger. <br> - Lower the carrier frequency (C6-02). |
| Excessive torque compensation |  | Reduce the torque compensation gain in parameter C4-01 until there is no speed loss but less current. |
| Parameters related to Speed Search are set incorrectly |  | - Check the settings for all Speed Search related parameters. <br> - Adjust the current used during Speed Search (b3-03) and the Speed Search deceleration time (b3-02). <br> - After Auto-Tuning, set b3-24 to 1 to enable Speed Estimation Speed Search. |
| Output current fluctuation due to input phase loss |  | Check the power supply for phase loss. |
| Digital Operator Display |  | Fault Name |
| -13 | oL3 | Overtorque Detection 1 |
|  |  | The current has exceeded the value set for torque detection (L6-02) for longer than the allowable time (L6-03). |
| -24 | oL4 | Overtorque Detection 2 |
|  |  | The current has exceeded the value set for Overtorque Detection 2 (L6-05) for longer than the allowable time (L6-06). |
| 015 | oL5 | Mechanical Weakening Detection 1 |
|  |  | Overtorque occurred, matching the conditions specified in L6-08. |
| 817 | oL7 | High Slip Braking oL |
|  |  | The output frequency stayed constant for longer than the time set to n3-04 during High Slip Braking. |
| $\mathrm{ar}_{\text {O- }}$ | oPr | External Digital Operator Connection Fault |
|  |  | The external operator has been disconnected from the drive. <br> Note: An oPr fault will occur when all of the following conditions are true: <br> - Output is interrupted when the operator is disconnected ( $02-06=1$ ). <br> - The Run command is assigned to the operator (b1-02 $=0$ and LOCAL has been selected). |
| 05 | oS | Overspeed (for Control Mode with PG) |
|  |  | The motor speed feedback exceeded the F1-08 setting. |
| Qu | ov | Overvoltage |
|  |  | Voltage in the DC bus has exceeded the overvoltage detection level. <br> - For 200 V class drives: approximately 410 V <br> - For 400 V class drives: approximately 820 V ( 740 V when E1-01 is less than 400 ) <br> - For 600 V class drives: approximately 1040 V |
| Cause |  | Possible Solution |

| Deceleration time is too short and regenerative energy is flowing from the motor into the drive | - Increase the deceleration time (C1-02, C1-04, C1-06, C1-08). <br> - Install a dynamic braking resistor or a dynamic braking resistor unit. <br> - Set L3-04 to 1 to enable stall prevention during deceleration. Stall Prevention is enabled as the default setting. |
| :---: | :---: |
| Fast acceleration time causes the motor to overshoot the speed reference | - Check if sudden drive acceleration triggers an overvoltage alarm. <br> - Increase the acceleration time. <br> - Use longer S-curve acceleration and deceleration times. <br> - Enable the Overvoltage Suppression function (L3-11 = 1). <br> - Lengthen the S-curve at acceleration end. |
| Excessive braking load | The braking torque was too high, causing regenerative energy to charge the DC bus. Reduce the braking torque, use a dynamic braking option, or lengthen decel time. |
| Surge voltage entering from the drive input power | Install a DC link choke. <br> Note: Voltage surge can result from a thyristor convertor and phase advancing capacitor using the same input power supply. |
| Ground fault in the output circuit causes the DC bus capacitor to overcharge | - Check the motor wiring for ground faults. <br> - Correct grounding shorts and reapply power. |
| Improper parameters related to Speed Search (including Speed Search after a momentary power loss and after a fault restart) | - Check the settings for Speed Search-related parameters. <br> - Enable Speed Search restart function (b3-19 greater than or equal to 1 to 10 ). <br> - Adjust the current level during Speed Search and the deceleration time (b3-02 and b3-03 respectively). <br> - Perform Stationary Auto-Tuning for line-to-line resistance and then set b3-14 to 1 to enable Speed Estimation Speed Search. |
| Drive input power voltage is too high | - Check the voltage. <br> - Lower drive input power voltage within the limits listed in the specifications. |
| The braking transistor or braking resistor are wired incorrectly | - Check braking transistor and braking resistor wiring for errors. <br> - Properly rewire the braking resistor device. |
| PG cable is disconnected | Reconnect the cable. |
| PG cable wiring is wrong | Correct the wiring. |
| Noise interference along the PG encoder wiring | Separate the wiring from the source of the noise. Often, this is the output lines from the drive. |
| Drive fails to operate properly due to noise interference | - Review the list of possible solutions provided for controlling noise. <br> - Review the section on handling noise interference and check the control circuit lines, main circuit lines, and ground wiring. |
| Load inertia is set incorrectly | - Check the load inertia settings when using KEB, overvoltage suppression, or Stall Prevention during deceleration. <br> - Adjust the load inertia ratio in L3-25 to better match the load. |
| Braking function is being used in OLV/PM | Connect a braking resistor. |
| Motor hunting occurs | - Adjust the parameters that control hunting. <br> - Set the gain for Hunting Prevention (n1-02). <br> - Adjust the AFR time constant (n2-02 and n2-03). <br> - Adjust the speed feedback detection suppression gain for PM motors (n8-45) and the time constant for pull-in current (n8-47). |
| Digital Operator Display | Fault Name |
|  | Input Phase Loss |
| PF PF | Drive input power has an open phase or has a large imbalance of voltage between phases. Detected when L8-05 is set 1 (enabled). |
| Cause | Possible Solution |
| There is phase loss in the drive input power | - Check for wiring errors in the main circuit drive input power. <br> - Correct the wiring. |
| There is loose wiring in the drive input power terminals | - Ensure the terminals are tightened properly. <br> - Apply the tightening torque as specified in this manual. Refer to Wire Gauges and Tightening Torque on page 55 for details. |
| There is excessive fluctuation in the drive input power voltage | - Check the voltage from the drive input power. <br> - Review the possible solutions for stabilizing the drive input power. |
| There is poor balance between voltage phases | Stabilize drive input power or disable phase loss detection. |

## 5．2 Fault Detection

| The main circuit capacitors are worn |  | －Check the maintenance time for the capacitors（U4－05）． <br> －Replace the capacitor if U4－05 is greater than $90 \%$ ．For instructions on replacing the capacitor，contact Yaskawa or a Yaskawa representative． |
| :---: | :---: | :---: |
|  |  | Check for problems with the drive input power．If drive input power appears normal but the alarm continues to occur，replace either the control board or the entire drive．For instructions on replacing the control board，contact Yaskawa or a Yaskawa representative． |
| Digital Operator Display |  | Fault Name |
| 9 | PGo | PG Disconnect（for any control modes using a PG option card） |
|  |  | No PG pulses are received for longer than the time set to F1－14． |
| 9ロロ | PGoH | PG Hardware Fault（detected when using a PG－X3 option card） |
|  |  | PG cable is not connected properly． |
| －1／ | rF | Braking Resistor Fault |
|  |  | The resistance of the braking resistor is too low． |
| rir | rH | Braking Resistor Overheat |
|  |  | Braking resistor protection was triggered． Fault detection is enabled when $\mathrm{L} 8-01=1$（disabled as a default）． |
| Cause |  | Possible Solution |
| Deceleration time is too short and excessive regenerative energy is flowing back into the drive |  | －Check the load，deceleration time，and speed． <br> －Reduce the load inertia． <br> －Increase the deceleration times（C1－02，C1－04，C1－06，C1－08，C1－09）． <br> －Replace the dynamic braking option with a larger device that can handle the power that is discharged． |
| Excessive braking inertia |  | Recalculate braking load and braking power．Reduce the braking load by adjusting braking resistor settings． |
| The braking operation duty cycle is too high |  | Check the braking operation duty cycle．Braking resistor protection for ERF－type braking resistors $(\mathrm{L} 8-01=1)$ allows a braking duty cycle of maximum $3 \%$ ． |
| The proper braking resistor has not been installed |  | －Check the specifications and conditions for the braking resistor device． <br> －Select the optimal braking resistor． |
| Note：The magnitude of the braking load trips the braking resistor overheat alarm，NOT the surface temperature．Using the braking resistor more frequently than its rating permits will trip the alarm even when the braking resistor surface is not very hot． |  |  |

| Digital Operator Display |  |  |

|  |  | Voltage drop in the gate drive board circuit |

$<1>$ Detected in models CIMR－A口4A0903 and 4A1200．

| uof | voF | Output Voltage Detection Fault |
| :--- | :--- | :--- |
|  |  |  |

## 5．3 Alarm Detection

## Alarm Codes，Causes，and Possible Solutions

Alarms are drive protection functions that do not necessarily cause the drive to stop．Once the cause of an alarm is removed， the drive will return to the same status is was before the alarm occurred．
When an alarm has been triggered，the ALM light on the digital operator display blinks and the alarm code display flashes．If a multi－function output is set for an alarm（ $\mathrm{H} 2-\square \square=10$ ），that output terminal will be triggered．

Note：If a multi－function output is set to close when an alarm occurs（ $\mathrm{H} 2-\square \square=10$ ），it will also close when maintenance periods are reached，triggering alarms LT－1 through LT－4（triggered only if H2－口I＝2F）．

Table 5．3 Alarm Codes，Causes，and Possible Solutions

| nEr | AEr | Communication Option Station Number Setting Error（CC－Link，CANopen，MECHATROLINK－II） |
| :---: | :---: | :---: |
|  |  | Option card node address is outside of the acceptable setting range． |
| b | bb | Baseblock |
|  |  | Drive output interrupted as indicated by an external baseblock signal． |
| bot | boL | Braking Transistor Overload Fault |
|  |  | The braking transistor in the drive has been overloaded． |
| 645 | bUS | Option Communication Error |
|  |  | －The connection was lost after initial communication was established． <br> －Assign a Run command frequency reference to the option． |
| ［品： | CALL | Serial Communication Transmission Error |
|  |  | Communication has not yet been established． |
| ［E］ | CE | MEMOBUS／Modbus Communication Error |
|  |  | Control data was not received correctly for two seconds． |
| Cr 51 | CrST | Cannot Reset |
| dEu | dEv | Speed Deviation（when using a PG option card） |
|  |  | The deviation between the speed reference and speed feedback is greater than the setting in F1－10 for longer than the time in F1－11． |
| din | dnE | Drive Disabled |
| $E F$ | EF | Forward／Reverse Run Command Input Error |
|  |  | Both forward run and reverse run closed simultaneously for longer than 0.5 s ． |
| EFO | EF0 | Option Card External Fault |
|  |  | An external fault condition is present． |
| EF： | EF1 | External Fault（Input Terminal S1） |
|  |  | External fault at multi－function input terminal S1． |
| $E F 2$ | EF2 | External fault（input terminal S2） |
|  |  | External fault at multi－function input terminal S2． |
| EF3 | EF3 | External fault（input terminal S3） |
|  |  | External fault at multi－function input terminal S3． |
| EFY | EF4 | External fault（input terminal S4） |
|  |  | External fault at multi－function input terminal S4． |
| EFS | EF5 | External fault（input terminal S5） |

$<1>$ Terminals H1，H2，DM + ，and DM－on 600 V class models are designed to the functionality，but are not certified to EN61800－5－1，ISO13849 Cat． 3，IEC／EN61508 SIL2，Insulation coordination：class 1.

| Hig | HCA | Current Alarm |
| :---: | :---: | :---: |
|  |  | Drive current exceeded overcurrent warning level（150\％of the rated current）． |
| ir－i | LT－1 | Cooling Fan Maintenance Time |
|  |  | The cooling fan has reached its expected maintenance period and may need to be replaced． <br> Note：An alarm output $(\mathrm{H} 2-\square \square=10)$ will only be triggered if both $(\mathrm{H} 2-\square \square=2 \mathrm{~F}$ and $\mathrm{H} 2-\square \square=10)$ are set． |
| くイーコ | LT－2 | Capacitor Maintenance Time |
|  |  | The main circuit and control circuit capacitors are nearing the end of their expected performance life． <br> Note：An alarm output $(\mathrm{H} 2-\square \square=10)$ will only be triggered if $\mathrm{H} 2-\square \square=2 \mathrm{~F}$ ． |
| ミ「ーコ | LT－3 | Soft Charge Bypass Relay Maintenance Time |
|  |  | The DC bus soft charge relay is nearing the end of its expected performance life． <br> Note：An alarm output $(\mathrm{H} 2-\square \square=10)$ will only be triggered if $\mathrm{H} 2-\square \square=2 \mathrm{~F}$ ． |

| ட「－！ | LT－4 | IGBT Maintenance Time（50\％） |
| :---: | :---: | :---: |
|  |  | IGBTs have reached $50 \%$ of their expected performance life． <br> Note：An alarm output $(\mathrm{H} 2-\square \square=10)$ will only be triggered if $\mathrm{H} 2-\square \square=2 \mathrm{~F}$ ． |

| －14 | oH | Heatsink Overheat |
| :---: | :---: | :---: |
|  |  | The temperature of the heatsink exceeded the overheat pre－alarm level set to L8－02 $\left(90-100{ }^{\circ} \mathrm{C}\right)$ ．Default value for L8－02 is determined by drive capacity（o2－04）． |
| ロHI | oH2 | Drive Overheat Warning |
|  |  | ＂Drive Overheat Warning＂was input to a multi－function input terminal，S1 through S8（H1－$\square \square=\mathrm{B}$ ）． |
|  |  |  |
| ロイフ | oH3 | Motor Overheat |
|  |  | The motor overheat signal entered to a multi－function analog input terminal exceeded the alarm level（H3－02， H3－06 or H3－10＝E）． |
|  |  |  |
| $\begin{aligned} & \text { ロH5 } \\ & <17> \end{aligned}$ | oH5 | Motor Overheat（NTC Input） |
|  |  | The motor temperature exceeded the level set to L1－16（or L1－18 for motor 2） |

$<1>$ Detected in models CIMR－AD4A0903 and 4A1200．

| －13 | oL3 | Overtorque 1 |
| :---: | :---: | :---: |
|  |  | Drive output current（or torque in OLV，CLV，AOLV／PM，and CLV／PM）was greater than L6－02 for longer than the time set to L6－03． |
| －14 | oL4 | Overtorque 2 |
|  |  | Drive output current（or torque in OLV，CLV，AOLV／PM，CLV／PM）was greater than L6－05 for longer than the time set to L6－06． |
| －15 | oL5 | Mechanical Weakening Detection 1 |
|  |  | Overtorque occurred，matching the conditions specified in L6－08． |
| 05 | oS | Overspeed（for Control Mode with PG） |
|  |  | The motor speed feedback exceeded the F1－08 setting． |
| 04 | ov | DC Bus Overvoltage |
|  |  | The DC bus voltage exceeded the trip point． <br> －For 200 V class drives：approximately 410 V <br> －For 400 V class drives：approximately 820 V （ 740 V when E1－01 is less than 400 ） <br> －For 600 V class drives：approximately 1040 V |
| 9095 | PASS | MEMOBUS／Modbus Comm．Test Mode Complete |
| 90 | PGo | PG Disconnect（for Control Mode with PG） |
|  |  | Detected when no PG pulses are received for a time longer than setting in F1－14． |
| Pロロ | PGoH | PG Hardware Fault（detected when using a PG－X3 option card） |
|  |  | PG cable has become disconnected． |
|  |  |  |
| 515 | SE | Note：This alarm will not trigger a multi－function output terminal that is set for alarm output （H2－ロロ＝10）． |
| $\begin{aligned} & \text { 「HO } \\ & <1> \end{aligned}$ | THo | Thermistor Disconnect |
|  |  | The thermistor used to detect motor temperature has become disconnected． |

$<1>$ Detected in models CIMR－AD4A0903 and 4A1200．

| FTCL | TrPC | IGBT Maintenance Time（90\％） |
| :---: | :---: | :---: |
|  |  | IGBTs have reached $90 \%$ of their expected performance life． |
| 听う | UL3 | Undertorque Detection 1 |
|  |  | Drive output current（or torque in OLV，CLV，AOLV／PM，and CLV／PM）less than L6－02 for longer than L6－03 time． |
| iit 4 | UL4 | Undertorque Detection 2 |
|  |  | Drive output current（or torque in OLV，CLV，AOLV／PM，and CLV／PM）less than L6－05 for longer than L6－06 time． |
| Uu | Uv | Undervoltage |
|  |  | One of the following conditions was true when the drive was stopped and a Run command was entered： <br> －DC bus voltage dropped below the level specified in L2－05． <br> －Contactor to suppress inrush current in the drive was opened． <br> －Low voltage in the control drive input power．This alarm outputs only if L2－01 is not 0 and DC bus voltage is under L2－05． |
| 4015 | voF | Output Voltage Detection Fault |
|  |  | There is a problem with the output voltage． |

## 5．4 Operator Programming Errors

## －Operator Programming Error Codes，Causes，and Possible Solutions

An Operator Programming Error（oPE）occurs when a contradictory parameter is set or an individual parameter is set to an inappropriate value．
The drive will not operate until the parameter or parameters causing the problem are set correctly．An oPE，however，does not trigger an alarm or fault output．If an oPE occurs，investigate the cause and refer to Table 5.4 for the appropriate action．When an oPE appears on the operator display，press the ENTER button to view U1－18 and see which parameter is causing the oPE．

Table 5.4 oPE Codes，Causes，and Possible Solutions

| 吅凫 | oPE01 | Drive Capacity Setting Fault |
| :---: | :---: | :---: |
|  |  | Drive capacity and the value set to o2－04 do not match． |
| ロロEOJ | oPE02 | Parameter Range Setting Error |
|  |  | Use U1－18 to find parameters set outside the range． |
| QPE日S | oPE03 | Multi－Function Input Selection Error |
|  |  | A contradictory setting is assigned to multi－function contact inputs H1－01 to H1－08． |
| ロロヒ可 | oPE04 | Initialization Required |
| ロロ605 | oPE05 | Run Command／Frequency Reference Source Selection Error |
| QPE05 | oPE06 | Control Method Selection Error |
|  |  | Correct the setting for the control method． |
| QPEDT | oPE07 | Multi－Function Analog Input Selection Error |
|  |  | A contradictory setting is assigned to multi－function analog inputs H3－02， H3－06，or H3－10 and PID functions conflict． |
| QPE日G | oPE08 | Parameter Selection Error |
|  |  | A function has been set that cannot be used in the motor control method selected． |
| －9609 | oPE09 | PID Control Selection Fault |
|  |  | PID control function selection is incorrect．Requires that PID control is enabled（b5－01＝ 1 to 4）． |
| QPE $\square_{0}$ | oPE10 | V／f Data Setting Error |
|  |  | One of the following setting errors has occurred： <br> －E1－04 $\geq$ E1－06 <br> E1－06 $\geq$ E1－07 <br> E1－07 $\geq$ E1－09 <br> or E1－09 $\geq$ E1－11 <br> －E3－04 $\geq$ E3－06 <br> E3－06 $\geq$ E3－07 <br> E3－07 $\geq$ E3－09 <br> or E3－09 $\geq$ E3－11 |
| OPE： | oPE11 | Carrier Frequency Setting Error |
|  |  | Correct the setting for the carrier frequency． |
| OPE G | oPE13 | Pulse Monitor Selection Error |
|  |  | Incorrect setting of monitor selection for pulse train（H6－06）． |
| QPE 15 | oPE15 | Torque Control Setting Error |
|  |  | Parameter settings that are not allowed in combination with Torque Control have been set． |
| QPE IG | oPE16 | Energy Savings Constants Error |

### 5.4 Operator Programming Errors

| OEE is | oPE18 | Online Tuning Parameter Setting Error |
| :--- | :--- | :--- |
|  |  |  |

### 5.5 Auto-Tuning Fault Detection

When the Auto-Tuning faults shown below are detected, the fault is displayed on the digital operator and the motor coasts to a stop. Auto-Tuning faults do not trigger a multi-function terminal set for fault or alarm output.
An End $\square$ error indicates that although Auto-Tuning has successfully completed, there is some discrepancy in the calculations. If an End error occurs, check for the cause of the error using the table below, and perform Auto-Tuning again after fixing the problem. Start the application if no problem can be diagnosed despite the existence of the End C error.

## Auto-Tuning Codes, Causes, and Possible Solutions

Table 5.5 Auto-Tuning Codes, Causes, and Possible Solutions

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| End1 | Excessive V/f Setting (detected only during Rotational Auto-Tuning and displayed after Auto-Tuning is <br> complete) |  |
| Cause |  |  |
| The torque reference exceeded 20\% during <br> Auto-Tuning. | Prior to Auto-Tuning, verify the information on the motor nameplate. <br> • Enter proper values from motor nameplate to parameters T1-03 to T1-05 and repeat Auto-Tuning. |  |
| The results from Auto-Tuning the no-load <br> current exceeded $80 \%$. | If possible, disconnect the motor from the load and perform Auto-Tuning. If the load cannot be uncoupled, <br> use the current Auto-Tuning results. |  |

| Digital Operator Display |  |
| :--- | :--- |
| End2 | Error Name |
| Cause | Motor Iron-Core Saturation Coefficient (detected only during Rotational Auto-Tuning and displayed after <br> Auto-Tuning is complete) |
| Possible Solutions |  |
| Motor data entered during Auto-Tuning <br> was incorrect. | - Make sure the data entered to the T1 parameters match the information written on the motor nameplate. <br> - Restart Auto-Tuning and enter the correct information. |
| Results from Auto-Tuning are outside the <br> parameter setting range, assigning the iron- <br> core saturation coefficients (E2-07 and <br> E2-08) to temporary values. | - Check and correct faulty motor wiring. |

| Digital Operator Display |  | Error Name |
| :---: | :---: | :---: |
| EndS | End3 | Rated Current Setting Alarm (displayed after Auto-Tuning is complete) |
| Cause |  | Possible Solutions |
| The correct c motor namep T1-04. | inted on the ered into | - Check the setting of parameter T1-04. <br> - Check the motor data and repeat Auto-Tuning. |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| End'l |  | Adjusted Slip Calculation Error |
| Cause |  |  |
| The calculated slip is outside the allowable <br> range. | Make sure the data entered for Auto-Tuning is correct. <br> If possible, perform Rotational Auto-Tuning. If not possible, perform Stationary Auto-Tuning 2. |  |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| End5 ${ }^{\prime \prime} 5$ |  | Resistance Tuning Error |
| Cause |  |  |
| The calculated resistance value is outside Solutions <br> the allowable range. | Double-check the data entered for the Auto-Tuning process. <br> • Check the motor and motor cable connection for faults. |  |

| Digital Operator Display |  | End6 |
| :--- | :--- | :--- |
| Cause |  | Leakage Inductance Alarm |
| Cassible Solutions |  |  |
| The calculated leakage inductance value is <br> outside the allowable range. | Double-check the data entered for the Auto-Tuning process. |  |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| End7 77 | No-Load Current Alarm |  |
| Cause |  | Possible Solutions |
| The entered no-load current value was <br> outside the allowable range. | Check and correct faulty motor wiring. |  |
| Auto-Tuning results were less than $5 \%$ of <br> the motor rated current. | Double-check the data entered for the Auto-Tuning process. |  |

| Digital Operator Display | Error Name |
| :--- | :--- |
| Cause | Motor Data Error |
| Er-01 |  |
| Motor data or data entered during <br> Auto-Tuning was incorrect | - Check that the motor data entered to T1 parameters matches motor nameplate input before Auto-Tuning. <br> $\cdot$ |
| Motor output power and motor-rated <br> current settings (T1-02 and T1-04) do not <br> match. | - Chestart Auto-Tuning and enter the correct information. |
| Motor rated current and detected no-load <br> current are inconsistent. | - Correct the settings of parameters T1-02 and T1-04. <br> Base frequency and motor rated speed the motor rated current and no-load current. <br> (T1-05 and T1-07) do not match.- Correct the settings of parameters T1-04 and E2-03. |

| Digital Operator Display |  | Error Name |
| :---: | :---: | :---: |
| Er-分J | Er-02 | Minor Fault |
| Cause |  | Possible Solutions |
| An alarm was triggered during AutoTuning. |  | Exit the Auto-Tuning menu, check the alarm code, remove the alarm cause, and repeat Auto-Tuning. |

| Digital Operator Display |  | Error Name |
| :---: | :---: | :---: |
| Er-93 | Er-03 | STOP Button Input |
| Cause |  | Possible Solutions |
| Auto-Tuning canceled by pressing STOP button. |  | Auto-Tuning did not complete properly. Restart Auto-Tuning. |

| Digital Operator Display |  | Error Name |
| :---: | :---: | :---: |
| Er- 04 | Er-04 |  |
| Cause |  | Possible Solutions |
| Motor data entered during Auto-Tuning was incorrect. |  | - Make sure the data entered to the T1 parameters match the information written on the motor nameplate. <br> - Restart Auto-Tuning and enter the correct information. |
| Results from Auto-Tuning are outside the parameter setting range or the tuning process took too long. |  | Check and correct faulty motor wiring. |
| Faulty motor cable or cable connection. |  |  |

| Digital Operator Display |  |
| :--- | :--- |
| Er-05 | Error Name |
| Cause | No-Load Current Error |
| Motor data entered during Auto-Tuning <br> was incorrect. | - Make sure the data entered to the T1 parameters match the information written on the motor nameplate. <br> - Restart Auto-Tuning and enter the correct information. |
| Results from Auto-Tuning are outside the <br> parameter setting range or the tuning <br> process took too long. | - Check and correct faulty motor wiring. |
| The load was too high during Rotational <br> Auto-tuning. | - Perform Rotational Auto-Tuning. |

### 5.5 Auto-Tuning Fault Detection

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| Er- -08 | Rause | Rated Slip Error |
| Prsible Solutions |  |  |
| Motor data entered during Auto-Tuning <br> was incorrect. | - Make sure the data entered to the T1 parameters match the information written on the motor nameplate. <br> - Restart Auto-Tuning and enter the correct information. |  |
| Results from Auto-Tuning are outside the <br> parameter setting range or the tuning <br> process took too long. | - Check and correct faulty motor wiring. <br> - Perform Rotational Auto-Tuning. |  |
| The load was too high during rotational <br> Auto-tuning. | - Disconnect the motor from machine and restart Auto-Tuning. If motor and load cannot be uncoupled make <br> sure the load is lower than 30\%. |  |

| Digital Operator Display |  |
| :--- | :--- |
| Er- -10 |  |
| Cause | Motor Direction Error |
| The encoder signal lines are not properly <br> connected to the drive. | Check and correct wiring to the PG encoder. |
| Motor direction and PG direction are <br> opposite. | Check the motor speed monitor U1-05 while manually turning the motor forward. If the sign displayed is <br> negative, change the setting of parameter F1-05. |
| The load pulled the motor in the opposite <br> direction of the speed reference and the <br> torque exceeded $100 \%$. | Uncouple the motor from the load and restart Auto-Tuning. |

| Digital Operator Display |  | Error Name |
| :---: | :---: | :---: |
| Er-i | Er-11 | Motor Speed Fault |
| Cause |  | Possible Solutions |
| Torque reference is too high. |  | - Increase the acceleration time (C1-01). <br> - Disconnect the machine from the motor if possible. |

| Digital Operator Display |  | Error Name |
| :---: | :---: | :---: |
| Er-iL | Er-12 | Current Detection Error |
| Cause |  | Possible Solutions |
| One of the motor phases is missing: (U/T1, V/T2, W/T3). |  | Check motor wiring and correct any problems. |
| The current exceeded the current rating of the drive. |  | - Check motor wiring for a short between motor lines. <br> - Close any magnetic contactors used between motors. |
| The current is too low. |  | - Replace the control board or the entire drive. For instructions on replacing the control board, contact Yaskawa or your nearest sales representative. |
| Attempted Auto-Tuning without motor connected to the drive. |  | Connect the motor and restart Auto-Tuning. |
| Current detection signal error. |  | Replace the control board or the entire drive. For instructions on replacing the control board, contact Yaskawa or your nearest sales representative. |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| $E r-i \overline{E r}$ | Er－13 | Leakage Inductance Error |
| Cause |  | Possible Solutions |
| Drive was unable to complete tuning for <br> leakage inductance within 300 seconds． | • Check all wiring and correct any mistakes． <br> • Check the motor rated current value written on the motor nameplate and enter the correct value to T1－04． |  |

| Digital Operator Display |  | Er－14 |  |
| :--- | :--- | :--- | :--- |
| Cause | Motor Speed Error 2 | Possible Solutions |  |
| Caurser |  |  |  |
| The motor speed exceeded twice the <br> amplitude of speed reference during Inertia <br> Tuning． | Reduce the ASR gain set to C5－01． |  |  |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| $E r-15$ | Er－15 | Torque Saturation Error |
| Cause |  |  |
| The output torque reached the torque limit <br> set in L7－01 through L7－04 during Inertia <br> Tuning． | Increase the torque limits in L7－01 through L7－04 within reasonable limits． <br> •Reduce the test signal amplitude in T3－01 and restart Auto－Tuning．If necessary，reduce the test signal <br> frequency（T3－02）and restart Auto－Tuning． |  |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| $E_{r}-i 5$ | Er－16 | Inertia Detection Error |
| Cause |  |  |
| The inertia identified by the drive was <br> abnormally small or abnormally large <br> during Inertia Tuning． | －Reduce the test signal amplitude in T3－01 and restart Auto－Tuning．If necessary，reduce the test signal <br> frequency（T3－02）and restart Auto－Tuning． <br> Check the basic motor inertia value entered to T3－03． |  |

| Digital Operator Display |  | Error Name |
| :---: | :---: | :---: |
| Er－in | Er－17 | Reverse Prohibited Error |
| Cause |  | Possible Solutions |
| Drive is prohibited from rotating the motor in reverse while attempting to perform Inertia Tuning． |  | －Inertia Auto－Tuning cannot be performed if the drive is restricted from rotating in reverse． <br> －Assuming it is acceptable for the application to rotate in reverse，set b1－04 to 0 and then pertorm Inertia Tuning． |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| $E r-i \square$ | Er－18 | Induction Voltage Error |
| Cause |  | Possible Solutions |
| The result of Back EMF Constant Tuning <br> （induced voltage）exceeds the allowable <br> setting range． | Double－check the data entered to the T2－ם口 parameters and restart Auto－Tuning． |  |

| Digital Operator Display |  | Error Name |
| :--- | :--- | :--- |
| $E_{-}-19$ | Er－19 | PM Inductance Error |
| Cause |  | Possible Solutions |
| The induced voltage constant attempted to <br> set a value to E5－08 or E5－09 that is outside <br> the allowable range． | Double－check the data entered to the T2－ロロ parameters and restart Auto－Tuning． |  |

| Digital Operator Display |  | Error Name |

| Er－TO | Er－20 | Stator Resistance Error |
| Cause |  | Possible Solutions |
| Stator resistance tuning attempted to set a value to E5－06 that is outside the allowable setting range． |  | Double－check the data entered to the T2－D］parameters and restart Auto－Tuning． |

### 5.5 Auto-Tuning Fault Detection

| Digital Operator Display |  |
| :--- | :--- |
| Cause Er-21 | Z Pulse Correction Error |
| Prome |  |
|  |  |
| Motor was coasting when Auto-Tuning <br> was performed. | Make sure the motor has stopped completely. Restart Auto-Tuning. |
| Either the motor or the PG encoder on the <br> motor are not properly wired. | Check the wiring for the motor and the PG encoder. Restart Auto-Tuning. |
| The direction for the PG encoder is set <br> incorrectly, or the number of pulses set for <br> the PG encoder is wrong. | Check the direction and number of pulses set for the PG encoder. Restart Auto-Tuning. |
| PG encoder is damaged. | Check the signal output from the PG encoder attached to the motor. Replace the PG if damaged. |

## 5．6 Copy Function Related Displays

## Tasks，Errors，and Troubleshooting

The table below lists the messages and errors that may appear when using the Copy function．
When executing the tasks offered by the Copy function，the operator will indicate the task being performed．When an error occurs，a code appears on the operator to indicate the error．Note that errors related to the Copy function do not trigger a multi－ function output terminal that has been set up to close when a fault or alarm occurs．To clear an error，simply press any key on the operator and the error display will disappear．
Table 5.6 lists the corrective action that can be taken when an error occurs．
Note：1．Whenever using the copy function，the drive should be fully stopped．
2．The drive will not accept a Run command while the Copy function is being executed．
3．Parameters can only be saved to a drive when the voltage class，capacity，control mode，and software version match．
Table 5．6 Copy Function Task and Error Displays

| Digital Operator Display |  | Task |
| :---: | :---: | :---: |
| Cory | CoPy | Writing Parameter Settings（flashing） |
| CRET | CPEr | Control Mode Mismatch |
| CTYE | CPyE | Error Writing Data |
| ［5Er | CSEr | Copy Unit Error |
| ${ }^{17} 95$ | dFPS | Drive Model Mismatch |
| End | End | Task Complete |
| FEr | iFEr | Communication Error |
| ndiri | ndAT | Model，Voltage Class，Capacity Mismatch |
| rotr | rdEr | Error Reading Data |
| rERo＇ | rEAd | Reading Parameter Settings（flashing） |
| URET | vAEr | Voltage Class，Capacity Mismatch |
| WFUE | vFyE | Parameter settings in the drive and those saved to the copy function are not the same |
| い「り | vrFy | Comparing Parameter Settings（flashing） |

## Fault Reset Methods

When a fault occurs，the cause of the fault must be removed and the drive must be restarted．The table below lists the different ways to restart the drive．

| After the Fault Occurs | Procedure |  |
| :---: | :---: | :---: |
| Fix the cause of the fault，restart the drive，and reset the fault | Press on the digital operator． |  |
| Resetting via Fault Reset Digital Input S4 | Close then open the fault signal digital input via terminal S4．S4 is set for＂Fault Reset＂as default （ $\mathrm{H} 1-04=14$ ）． |  |

### 5.6 Copy Function Related Displays

After the Fault Occurs Procedure

Turn off the main power supply if the above methods do not reset the fault. Reapply power after the digital operator display has turned off.

Note: If the Run command is present, the drive will disregard any attempts to reset the fault. Remove the Run command before attempting to clear a fault situation.

## Periodic Inspection \& Maintenance

This chapter describes the periodic inspection and maintenance of the drive to ensure that it receives the proper care to maintain overall performance.
6.1 INSPECTION.......................................................................................................... 160
6.2 PERIODIC MAINTENANCE................................................................................. 163
6.3 DRIVE REPLACEMENT......................................................................................... 165

### 6.1 Inspection

Power electronics have limited life and may exhibit changes in characteristics or performance deterioration after years of use under normal conditions. To help avoid such problems, it is important to perform preventive maintenance and periodic inspection on the drive.
Drives contain a variety of power electronics such as power transistors, semiconductors, capacitors, resistors, fans, and relays. The electronics in the drive serve a critical role in maintaining proper motor control.
Follow the inspection lists provided in this chapter as a part of a regular maintenance program.
Note: The drive will require more frequent inspection if it is placed in harsh environments, such as:

- High ambient temperatures
- Frequent starting and stopping
- Fluctuations in the AC supply or load
- Excessive vibrations or shock loading
- Dust, metal dust, salt, sulfuric acid, chlorine atmospheres
- Poor storage conditions.

Perform the first equipment inspection one to two years after installation.

## Recommended Daily Inspection

Table 6.1 outlines the recommended daily inspection for Yaskawa drives. Check the following items on a daily basis to avoid premature deterioration in performance or product failure. Copy this checklist and mark the "Checked" column after each inspection.

Table 6.1 General Recommended Daily Inspection Checklist

| Inspection Category | Inspection Points | Corrective Action | Checked |
| :---: | :---: | :---: | :---: |
| Motor | Inspect for abnormal oscillation or noise coming from the motor. | - Check the load coupling. <br> - Measure motor vibration. <br> - Tighten all loose components. |  |
| Cooling | Inspect for abnormal heat generated from the drive or motor and visible discoloration. | Check for the following: <br> - Excessive load. <br> - Loose connections. <br> - Dirty heatsink or motor. <br> - Ambient temperature. |  |
|  | Inspect drive cooling fan and circulation fan operation. | Check for the following: <br> - Clogged or dirty fan. <br> - Correct Fan operation parameter setting. |  |
| Environment | Verify the drive environment complies with the specifications listed in Installation Environment on page 28. | Eliminate the source of contaminants or correct poor environment. |  |
| Load | The drive output current should not be higher than the motor or drive rating for an extended period of time. | Check for the following: <br> - Excessive load. <br> - Correct motor parameter settings. |  |
| Power Supply Voltage | Check main power supply and control voltages. | - Correct the voltage or power supply to within nameplate specifications. <br> - Verify all main circuit phases. |  |

## Recommended Periodic Inspection

Table 6.2 outlines the recommended periodic inspections for Yaskawa drive installations. Although periodic inspections should generally be performed once a year; the drive may require more frequent inspection in harsh environments or with rigorous use. Operating and environmental conditions, along with experience in each application, will determine the actual inspection frequency for each installation. Periodic inspection will help to avoid premature deterioration in performance or product failure. Copy this checklist and mark the "Checked" column after each inspection.

## Periodic Inspection

WARNING! Electrical Shock Hazard. Do not inspect, connect, or disconnect any wiring while the power is on. Failure to comply can result in serious personal injury. Before servicing the drive, disconnect all power to the equipment. The internal capacitor remains charged even after the power supply is turned off. After shutting off the power, wait for at least the amount of time specified on the drive before touching any components.

Table 6.2 Periodic Inspection Checklist

| Inspection Area | Inspection Points | Corrective Action | Checked |
| :---: | :---: | :---: | :---: |
| Main Circuit Periodic Inspection |  |  |  |
|  | - Inspect equipment for discoloration from overheating or deterioration. <br> - Inspect for damaged or deformed parts. | - Replace damaged components as required. <br> - The drive has few serviceable parts and may require complete drive replacement. |  |
| General | Inspect for dirt, foreign particles, or dust collection on components. | - Inspect enclosure door seal if used. <br> - Use dry air to clear away foreign matter. Use a pressure of $39.2 \times 10^{4}$ to $58.8 \times 10^{4} \mathrm{~Pa}$ $\left(4-6 \mathrm{~kg} \cdot \mathrm{~cm}^{2}\right)(57$ to 85 psi$)$. <br> - Replace components if cleaning is not possible. |  |
| Conductors and Wiring | - Inspect wiring and connections for discoloration, damage, or heat stress. <br> - Inspect wire insulation and shielding for wear. | Repair or replace damaged wiring. |  |
| Terminals | Inspect terminals for stripped, damaged, or loose connections. | Tighten loose screws and replace damaged screws or terminals. |  |
| Relays and Contactors | - Inspect contactors and relays for excessive noise during operation. <br> - Inspect coils for signs of overheating such as melted or cracked insulation. | - Check coil voltage for overvoltage or undervoltage conditions. <br> - Replace damaged removable relays, contactors, or circuit board. |  |
| Braking Resistors | Inspect for discoloration of heat stress on or around resistors. | - Minor discoloration may be acceptable. <br> - Check for loose connections if discoloration exists. |  |
| Electrolytic Capacitor | - Inspect for leaking, discoloration, or cracks. <br> - Check if the cap has come off, for any swelling, or if the sides have burst open. | The drive has few serviceable parts and may require complete drive replacement. |  |
| Diode, IGBT <br> (Power Transistor) | Inspect for dust or other foreign material collected on the surface. | Use dry air to clear away foreign matter. Use a pressure of $39.2 \times 10^{4}$ to $58.8 \times 10^{4} \mathrm{~Pa}$ $\left(4-6 \mathrm{~kg} \cdot \mathrm{~cm}^{2}\right)(57$ to 85 psi$)$. |  |
| Motor Periodic Inspection |  |  |  |
| Operation Check | Check for increased vibration or abnormal noise. | Stop the motor and contact qualified maintenance personnel as required. |  |
| Control Circuit Periodic Inspection |  |  |  |
| General | - Inspect terminals for stripped, damaged, or loose connections. <br> - Make sure all terminals have been properly tightened. | - Tighten loose screws and replace damaged screws or terminals. <br> - If terminals are integral to a circuit board, then board or drive replacement may be required. |  |
| Circuit Boards | Check for any odor, discoloration, and rust. Make sure connections are properly fastened and that no dust or oil mist has accumulated on the surface of the board. | - Fix any loose connections. <br> - If an antistatic cloth or vacuum plunger cannot be used, replace the board. <br> - Do not use any solvents to clean the board. <br> - Use dry air to clear away foreign matter. Use a pressure of $39.2 \times 10^{4}$ to $58.8 \times 10^{4} \mathrm{~Pa}$ $\left(4-6 \mathrm{~kg} \cdot \mathrm{~cm}^{2}\right)(57$ to 85 psi$)$. <br> The drive has few serviceable parts and may require complete drive replacement. |  |

### 6.1 Inspection

| Inspection Area | Inspection Points | Corrective Action | Checked |
| :---: | :---: | :---: | :---: |
| Cooling System Periodic Inspection |  |  |  |
| Cooling Fan, Circulation Fan, Control Board Cooling Fan | - Check for abnormal oscillation or unusual noise. <br> - Check for damaged or missing fan blades. | Replace as required. |  |
| Heatsink | Inspect for dust or other foreign material collected on the surface. | Use dry air to clear away foreign matter. Use a pressure of $39.2 \times 10^{4}$ to $58.8 \times 10^{4} \mathrm{~Pa}$ $\left(4-6 \mathrm{~kg} \cdot \mathrm{~cm}^{2}\right)(57$ to 85 psi$)$. |  |
| Air Duct | Inspect air intake and exhaust openings. They must be free from obstruction and properly installed. | - Visually inspect the area. <br> - Clear obstructions and clean air duct as required. |  |
| Display Periodic Inspection |  |  |  |
| Digital Operator | - Make sure data appears on the operator properly. <br> - Inspect for dust or other foreign material that may have collected on surrounding components. | - Contact the nearest sales office if there is any trouble with the display or keypad. <br> - Clean the digital operator. |  |

### 6.2 Periodic Maintenance

The drive has Maintenance Monitors that keep track of component wear. This feature provides advance maintenance warning and eliminates the need to shut down the entire system for unexpected problems. The drive allows the user to check predicted maintenance periods for the components listed below.

- Cooling Fan, Circulation Fan, Control Board Cooling Fan
- Electrolytic Capacitors
- Inrush Prevention Circuit
- IGBTs

For replacement parts, contact the distributor where the drive was purchased or contact Yaskawa directly.

## Replacement Parts

Table 6.3 contains the estimated performance life of components that require replacement during the life of the drive. Only use Yaskawa replacement parts for the appropriate drive model and revision.

Table 6.3 Estimated Performance Life

| Component | Estimated Performance Life |
| :---: | :---: |
| Cooling Fan, Circulation Fan | 10 years |
| Electrolytic Capacitors | 10 years $<1>$ |

$<1>$ The drive has few serviceable parts and may require complete drive replacement.
NOTICE: Estimated performance life based on specific usage conditions. These conditions are provided for the purpose of replacing parts to maintain performance. Some parts may require more frequent replacement due to poor environments or rigorous use.
Usage conditions for estimated performance life:
Ambient temperature: Yearly average of $40^{\circ} \mathrm{C}$ (IP00/Open Type enclosure)
Load factor: 80\% maximum
Operation time: 24 hours a day

## - Performance Life Monitors Maintenance Monitors

The drive calculates the maintenance period for components that may require replacement during the life of the drive. A percentage of the maintenance period is displayed on the digital operator by viewing the appropriate monitor parameter.
When the maintenance period reaches $100 \%$, there is increased risk that the drive may malfunction. Yaskawa recommends checking the maintenance period regularly to ensure maximum performance life.

## Refer to Recommended Periodic Inspection on page 161 for more details.

Table 6.4 Performance Life Monitors Used for Component Replacement

| Parameter | Component | Contents |
| :---: | :--- | :--- |
| U4-03 | Cooling Fan <br> Circulation Fan <br> Control Board Cooling <br> Fan | Displays the accumulated operation time of the fan, from 0 to 99999 hours. This value is automatically reset <br> to 0 once it reaches 99999. |
| U4-04 | Displays the accumulated fan operation time as a percentage of the specified maintenance period. |  |
| U4-05 | DC Bus Capacitors | Displays the accumulated time the capacitors are used as a percentage of the specified maintenance period. |
| U4-06 | Inrush (pre-charge) <br> Relay | Displays the number of times the drive is powered up as a percentage of the performance life of the inrush <br> circuit. |
| U4-07 | IGBT | Displays the percentage of the maintenance period reached by the IGBTs. |

## Alarm Outputs for Maintenance Monitors

An output can be set up to inform the user when a specific components has neared its expected performance life.
When one of multi-function digital output terminals has been assigned the maintenance monitor function ( $\mathrm{H} 2-\square \square=2 \mathrm{~F}$ ), the terminal will close when the cooling fan, DC bus capacitors, or DC bus pre-charge relay reach $90 \%$ of the expected performance life, or when the IGBTs have reached $50 \%$ of their expected performance life. Additionally the digital operator will display an alarm like shown in Table 6.5 to indicate the specific components that may need maintenance.

Table 6.5 Maintenance Alarms

| Digital Operator Alarm Display |  | Function | Corrective Action |
| :---: | :---: | :---: | :---: |
| if-i <l> | LT-1 | The cooling fans have reached $90 \%$ of their designated life time. | Replace the cooling fan. |
|  | LT-2 | The DC bus capacitors have reached $90 \%$ of their designated life time. | Contact a Yaskawa representative or the nearest Yaskawa sales office on possible drive replacement. |
|  | LT-3 | The DC bus charge circuit has reached $90 \%$ of its designated life time. | Contact a Yaskawa representative or the nearest Yaskawa sales office on possible drive replacement. |
| [ $1-4$ <l> | LT-4 | The IGBTs have reached $50 \%$ of their designated life time. | Check the load, carrier frequency, and output frequency. |
| FrPI <2> | TrPC | The IGBTs have reached $90 \%$ of their designated life time. | Contact a Yaskawa representative or the nearest Yaskawa sales office on possible drive replacement. |

$<1>$ This alarm message will be output only if the Maintenance Monitor function is assigned to one of the digital outputs ( $\mathrm{H} 2-\mathrm{\square} \mathrm{\square}=2 \mathrm{~F}$ ). The alarm will also trigger a digital output that is programmed for alarm indication ( $\mathrm{H} 2-\square \square=10$ ).
$<2>$ This alarm message will always be output, even if the Maintenance Monitor function is not assigned to any of the digital outputs ( $\mathrm{H} 2-\square \square=2 \mathrm{~F}$ ). The alarm will also trigger a digital output that is programmed for alarm indication $(\mathrm{H} 2-\square \square=10)$.

## Related Drive Parameters

Use parameters o4-03, o4-05, o4-07, and o4-09 to reset a Maintenance Monitor to zero after replacing a specific component. Refer to Parameter List on page 187 for details on parameter settings.
NOTICE: If these parameters are not reset after the corresponding parts have been replaced, the Maintenance Monitor function will continue to count down the performance life from the value that was reached with the old part. If the Maintenance Monitor is not reset, the drive will not have the correct value of the performance life for the new component.

### 6.3 Drive Replacement

## Replacing the Drive

WARNING! Electrical Shock Hazard. Do not connect or disconnect wiring while the power is on. Failure to comply can result in serious personal injury. Before servicing the drive, disconnect all power to the equipment. The internal capacitor remains charged even after the power supply is turned off. After shutting off the power, wait for at least the amount of time specified on the drive before touching any components.

WARNING! Electrical Shock Hazard. Do not allow unqualified personnel to perform work on the drive. Failure to comply could result in serious injury. Installation, maintenance, inspection and servicing must be performed only by authorized personnel familiar with installation, adjustment and maintenance of AC drives.

NOTICE: Observe proper electrostatic discharge procedures (ESD) when handling the drive and circuit boards. Failure to comply may result in ESD damage to the drive circuitry.
The following procedure explains how to replace a drive.
This section provides instructions for drive replacement only.
To install option boards or other types of options, refer to the specific manuals for those options.
NOTICE: When transferring a braking transistor, braking resistor, or other type of option from a damaged drive to a new replacement drive, make sure it is working properly before reconnecting it to the new drive. Replace broken options to prevent immediate breakdown of the replacement drive.

1. Remove the terminal cover.

Figure 6.1 Remove the Terminal Cover
2. Loosen the screws holding the terminal board in place. Remove the screw securing the bottom cover and remove the bottom cover from the drive.

Note: IP00/Open Type enclosure drives do not have a bottom cover or conduit.

Figure 6.2 Unscrew the Terminal Board and Remove the Bottom Cover
3. Slide the terminal board as illustrated by the arrows to remove it from the drive along with the bottom cover.

Figure 6.3 Remove the Terminal Board

Figure 6.4 Disconnected Removable Terminal Board
4. Disconnect all option cards and options, making sure they are intact before reusing.
5. Replace the drive and wire the main circuit.

## Installing the Drive

1. After wiring the main circuit, connect the terminal block to the drive as shown in Figure 6.5. Use the installation screw to fasten the terminal block into place.

Figure 6.5 Install the Terminal Board
2. Reconnect options for the new drive the same way the options were connected in the old drive. Connect option boards to the same option ports in the new drive that were used in the old drive.
3. Replace the terminal cover.
4. After powering on the drive, all parameter settings are transferred from the terminal board to the drive memory. If an oPE04 error occurs, load the parameter settings saved on the terminal board to the new drive by setting parameter A1-03 to 5550. Reset the Maintenance Monitor function timers by setting parameters 04-01 through o4-12 to 0 , and parameter 04-13 to 1 .

## Peripheral Devices \& Options

This chapter explains option installation procedures for the drive.7.1 OPTION CARD INSTALLATION.168

### 7.1 Option Card Installation

This section provides instructions on installing option cards.

## - Installing Option Cards

Table 7.1 below lists the number of option cards that can be connected to the drive and the drive ports for connecting those option cards.

Table 7.1 Option Card Installation

| Option Card | Port/Connector | Number of Cards Possible |
| :--- | :---: | :---: |
| SI-EN3, SI-EM3, SI-N3, SI-P3, SI-T3, SI-C3, SI-S3, <br> AI-A3<1>, DI-A3 $<1>$ | CN5-A | 1 |
| PG-X3, PG-B3 | CN5-B, C | $2^{<2>}$ |
| DO-A3, AO-A3 | CN5-A, B, C | 1 |

$<1>$ Option cards AI-A3 and DI-A3 cannot set the frequency reference when installed to ports CN5-B or CN5-C. It is still possible, however, to view the input status using U1-21, U1-22, U1-23 (for AI-A3), and U1-17 (for DI-A3).
$<2>$ Use port CN5-C when connecting one PG option card. Use ports CN5-B and CN5-C when connecting two PG option cards.

## Installation Procedure

DANGER! Electircal Shock Hazard. Disconnect all power to the drive and wait at least the amount of time specified on the drive front cover safety label. After all indicators are off, measure the DC bus voltage to confirm safe level, and check for unsafe voltages before servicing to prevent electric shock. The internal capacitor remains charged even after the power supply is turned off.

WARNING! Electrical Shock Hazard. Do not allow unqualified personnel to perform work on the drive. Failure to comply could result in death or serious injury. Maintenance, inspection, and replacement of parts must be performed only by authorized personnel familiar with installation, adjustment and maintenance of AC drives and Option Cards.
NOTICE: Damage to Equipment. Observe proper electrostatic discharge procedures (ESD) when handling the option card, drive, and circuit boards. Failure to comply may result in ESD damage to circuitry.
NOTICE: Damage to Equipment. Tighten all terminal screws to the specified tightening torque. Failure to comply may cause the application to operate incorrectly or damage the drive.
Use the procedure described below when installing option cards to the drive.

1. Shut off power to the drive, wait the appropriate amount of time for voltage to dissipate, then remove the operator and front cover. Refer to Digital Operator and Front Cover on page 49.
2. Insert the CN5 connector on the option card into the matching CN5 connector on the drive, then fasten it into place using one of the screws included with the option card.

A - Connector CN5-C
B - Connector CN5-B
C - Connector CN5-A
D - Drive grounding terminal (FE)
E - Insert connector CN5 here
F - Option card

G-Mounting screw
H-Ground wire
I - Use wire cutters to create an opening for cable lines
J - Front cover
K - Digital operator
L - Terminal cover

Figure 7.1 Installing an Option Card
3. Connect the ground wire to the ground terminal using one of the screws.

Some option cards come with ground wires of different lengths for connecting the card to the drive. Select the ground wire with the most appropriate length.
Note: There are only two screw holes on the drive for ground terminals. When connecting three option cards, two ground wires will need to share the same ground terminal.

Figure 7.2 Connecting the Ground Terminal
4. Wire the option card to the terminal block on the option card.

Refer to the option card manual for wiring instructions.
When installing option cards to models CIMR-AD2A0004 to 2A0040, CIMR-AD4A0002 to 4A0023, and CIMR-AD5A0003 to 5A0011, it may be necessary to route the cables connected to the option through the top cover to the outside. In this case, cut out the perforated openings on the left side of the drive top cover, being careful not to leave any sharp edges that may damage the cable.
Models CIMR-AD2A0056 to 2A0415, CIMR-AD4A0031 to 4A1200, and CIMR-AD5A0017 to 5A0242 have enough space to keep all wiring inside the unit.

Figure 7.3 Wiring Space
5. Replace the front cover and digital operator on the drive.

Note: 1. Leave enough space when wiring to easily reattach the front cover. Make sure no wires get caught between the front cover and the drive.
2. Any exposed wiring will void the wall-mount enclosure rating.

## This Page Intentionally Blank

## Appendix: A

## Specifications

A. 1 HEAVY DUTY AND NORMAL DUTY RATINGS ..... 172
A. 2 POWER RATINGS ..... 173
A. 3 DRIVE SPECIFICATIONS ..... 182
A. 4 DRIVE WATT LOSS DATA ..... 184

## A. 1 Heavy Duty and Normal Duty Ratings

The capacity of the drive is based on two types of load characteristics: Heavy Duty (HD) and Normal Duty (ND). Refer to the following table for the differences between HD and ND.

Table A. 1 Selecting the Appropriate Load Rating

| Setting Parameter <br> C6-01 | Rated Output Current | Overload Tolerance | Default Carrier Frequency |
| :---: | :--- | :--- | :--- |
| $0:$ Heavy Duty | HD Rating varies by model $<1>$ | $150 \%$ rated output current for 60 s | 2 kHz |
| 1: Normal Duty <br> (default) | ND Rating varies by model $<1>$ | $120 \%$ rated output current for 60 s varies by model | 2 kHz, Swing PWM |

$<1>$ Refer to Power Ratings on page 173 for information on rating changes based on drive model.

- HD and ND: HD refers to applications requiring constant torque output, while ND refers to applications with variable torque needs. The drive allows the user to select HD or ND torque depending on the application. Fans, pumps, and blowers should use ND $(\mathrm{C} 6-01=1)$, and other applications generally use HD (C6-01 = 0) .
- Swing PWM: Swing PWM equivalent to a 2 kHz audible noise. This function turns the motor noise into a less obtrusive white noise.
Note: Differences between HD ratings and ND ratings for the drive include rated input and output current, overload capacity, carrier frequency, and current limit. The default setting is for ND $(\mathrm{C} 6-01=1)$.

## A. 2 Power Ratings

## , Three-Phase 200 V Class Drive Models CIMR-AD2A0004 to 2A0030

Table A. 2 Power Ratings (Three-Phase 200 V Class)

| Item |  |  | Specification |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  | Maximum Output Voltage (V) |  | Three-phase 200 to 240 V (proportional to input voltage) |  |  |  |  |  |  |  |
|  | Maximum Output Frequency (Hz) |  | 400 Hz (user-set) |  |  |  |  |  |  |  |

$<1>$ The motor capacity (HP) refers to a NEC rated 4-pole motor. The rated output current of the drive output amps should be equal to or greater than the motor current. Select the appropriate capacity drive if operating the motor continuously above motor nameplate current.
$<2>$ Assumes operation at the rated output current. Input current rating varies depending on the power supply transformer, input reactor, wiring connections, and power supply impedance.
$<3>$ DC is not available for UL/CE standards.
$<4>$ Rated motor capacity is calculated with a rated output voltage of 220 V .
$<5>$ Carrier frequency is set to 2 kHz . Current derating is required in order to raise the carrier frequency.
$<6>$ Carrier frequency can be increased to 8 kHz while keeping this current derating. Higher carrier frequency settings require derating..

|  | Overload Tolerance |  | ND Rating: $120 \%$ of rated output current for 60 s <br> HD Rating: $150 \%$ of rated output current for 60 s <br> (Derating may be required for applications that start and stop frequently) |  |  |  |  |  |  |  |  |
|  | Carrier Frequency |  | User adjustable between 2 and 15 kHz |  |  |  |  | User adjustable between 2 and 10 kHz |  |  |  |
|  | Maximum Output Voltage (V) |  | Three-phase 500 to 600 V (proportional to input voltage) |  |  |  |  |  |  |  |  |
|  | Maximum Output Frequency (Hz) |  | 400 Hz (user-set) |  |  |  |  |  |  |  |  |

$<1>$ The motor capacity (HP) refers to a NEC rated 4-pole motor. The rated output current of the drive output amps should be equal to or greater than the motor current. Select the appropriate capacity drive if operating the motor continuously above motor nameplate current.
$<2>$ Assumes operation at the rated output current. Input current rating varies depending on the power supply transformer, input reactor, wiring connections, and power supply impedance.
$<3>$ Rated motor capacity is calculated with a rated output voltage of 575 V .
$<4>$ Carrier frequency is set to 2 kHz . Current derating is required to raise the carrier frequency.
$<5>$ Carrier frequency can be increased to 8 kHz while keeping this current derating. Higher carrier frequency settings require derating.

## Three-Phase 600 V Class Drive Models CIMR-AD5A0041 to 5A0099

|  | Overload Tolerance |  | ND Rating: $120 \%$ of rated output current for 60 sHD Rating: $150 \%$ of rated output current for 60 s(Derating may be required for applications that start and stop frequently) |  |  |  |
|  | Carrier Frequency |  | User adjustable between 2 and 3 kHz |  |  |  |
|  | Maximum Output Voltage (V) |  | Three-phase 500 to 600 V (proportional to input voltage) |  |  |  |
|  | Maximum Output Frequency (Hz) |  | 400 Hz (user-set) |  |  |  |

$<1>$ The motor capacity (HP) refers to a NEC rated 4-pole motor. The rated output current of the drive output amps should be equal to or greater than the motor current. Select the appropriate capacity drive if operating the motor continuously above motor nameplate current.
$<2>$ Assumes operation at the rated output current. Input current rating varies depending on the power supply transformer, input reactor, wiring connections, and power supply impedance.
$<3>$ Rated motor capacity is calculated with a rated output voltage of 575 V .
$<4>$ Carrier frequency can be increased to 2 kHz while keeping this current derating. Higher carrier frequency settings require derating.
$<5>$ Carrier frequency can be increased to 8 kHz while keeping this current derating. Higher carrier frequency settings require derating.
$<6>$ Carrier frequency can be increased to 5 kHz while keeping this current derating. Higher carrier frequency settings require derating.

## A. 3 Drive Specifications

Note: 1. Perform rotational Auto-Tuning to obtain the performance specifications given below.
2. For optimum performance life of the drive, install the drive in an environment that meets the required specifications.

|  | Item | Specification |
| :---: | :---: | :---: |
| Control Characteristics | Control Method | The following control methods can be set using drive parameters: <br> - V/f Control (V/f) <br> - V/f Control with PG (V/f w/PG) <br> - Open Loop Vector Control (OLV) <br> - Closed Loop Vector Control (CLV) <br> - Open Loop Vector Control for PM (OLV/PM) <br> - Advanced Open Loop Vector Control for PM (AOLV/PM) <br> - Closed Loop Vector Control for PM (CLV/PM) <br> Note: PM motor control modes are not available on 600 V class drives, CIMR-Aㅁ5Aㅁㅁㅁㅁㅁ. |
|  | Frequency Control Range | 0.01 to 400 Hz |
|  | Frequency Accuracy (Temperature Fluctuation) | Digital input: within $\pm 0.01 \%$ of the max output frequency $\left(-10\right.$ to $\left.+40^{\circ} \mathrm{C}\right)$ Analog input: within $\pm 0.1 \%$ of the max output frequency $\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right)$ |
|  | Frequency Setting Resolution | Digital inputs: 0.01 Hz <br> Analog inputs: $1 / 2048$ of the maximum output frequency setting (11 bit plus sign) |
|  | Output Frequency Resolution | 0.001 Hz |
|  | Frequency Setting Signal | -10 to $10 \mathrm{~V}, 0$ to $10 \mathrm{~V}, 0$ to $20 \mathrm{~mA}, 4$ to 20 mA , Pulse Train Input |
|  | Starting Torque ${ }^{\text {<2> }}$ | V/f, V/f w/PG: $150 \%$ at 3 Hz OLV: $200 \%$ at $0.3 \mathrm{~Hz}<1>$ CLV, AOLV/PM, CLV/PM: $200 \%$ at $0.0 \mathrm{r} / \mathrm{min}<1>$ OLV/PM: $100 \%$ at 3 Hz |
|  | Speed Control Range ${ }^{\text {<2> }}$ | V/f, V/f w/PG: $1: 40$ OLV: 1:200 CLV, CLV/PM: 1:1500 OLV/PM: 1:20 AOLV/PM: 1:100 |
|  | Speed Control Accuracy ${ }^{\text {<2> }}$ | $\begin{aligned} & \hline \text { OLV: } \pm 0.2 \%\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right) \\ & \mathrm{CLV}: \pm 0.02 \%\left(25^{\circ} \mathrm{C} \pm 10^{\circ} \mathrm{C}\right) \\ & \hline \end{aligned}$ |
|  | Speed Response ${ }^{<2>}$ | OLV, OLV/PM, AOLV/PM: 10 Hz CLV, CLV/PM: 50 Hz |
|  | Torque Limit | Parameters setting allow separate limits in four quadrants (available in OLV, CLV, AOLV/PM, CLV/PM) |
|  | Accel/Decel Time | 0.0 to $6000.0 \mathrm{~s} \mathrm{(4} \mathrm{selectable} \mathrm{combinations} \mathrm{of} \mathrm{independent} \mathrm{acceleration} \mathrm{and} \mathrm{deceleration} \mathrm{settings)}$ |
|  | Braking Torque | Approx. 20\% (approx. 125\% when using braking resistor) ${ }^{<3>}$ <br> - Short-time decel torque ${ }^{<4>}$ : over $100 \%$ for $0.4 / 0.75 \mathrm{~kW}$ motors, over $50 \%$ for 1.5 kW motors, and over $20 \%$ for 2.2 kW and above motors ${ }^{<5>}$ (overexcitation braking/High Slip Braking: approx. 40\%) <br> - Continuous regenerative torque: approx. $20 \%^{<5>}$ (approx. $125 \%$ with dynamic braking resistor option ${ }^{<3>}: 10 \%$ ED, 10 s) |
|  | Braking Transistor | Models 2A0004 to 2A0138, 4A0002 to 4A0072, and 5A0003 to 5A0052 have a built-in braking transistor. |
|  | V/f Characteristics | User-selected programs and V/f preset patterns possible |
|  | Main Control Functions | Torque Control, Droop Control, Speed/torque Control Switching, Feed Forward Control, Zero Servo Function, Momentary Power Loss Ride-Thru, Speed Search, Overtorque/Undertorque Detection, Torque Limit, 17 Step Speed (max), Accel/decel Switch, S-curve Accel/decel, 3-wire Sequence, Autotuning (rotational, stationary tuning), Dwell, Cooling Fan on/off Switch, Slip Compensation, Torque Compensation, Frequency Jump, Upper/lower Limits for Frequency Reference, DC Injection Braking at Start and Stop, Overexcitation Braking, High Slip Braking, PID Control (with sleep function), Energy Saving Control, MEMOBUS/Modbus Comm. (RS-422/485 max, 115.2 kbps), Fault Restart, Application Presets, DriveWorksEZ (customized function), Removable Terminal Block with Parameter Backup Function, Online Tuning, KEB, Overexcitation Deceleration, Inertia (ASR) Tuning, Overvoltage Suppression, High Frequency Injection. |

| Item |  | Specification |
| :---: | :---: | :---: |
| Protection Functions | Motor Protection | Electronic thermal overload relay |
|  | Momentary Overcurrent Protection | Drive stops when output current exceeds 200\% of Heavy Duty Rating |
|  | Overload Protection | Drive stops after 60 s at $150 \%$ of rated Heavy Duty output current ${ }^{\text {<6> }}$ |
|  | Overvoltage Protection | 200 V class: Stops when DC bus voltage exceeds approx. 410 V 400 V class: Stops when DC bus voltage exceeds approx. 820 V 600 V class: Stops when DC bus voltage exceeds approx. 1040 V |
|  | Undervoltage Protection | 200 V class: Stops when DC bus voltage falls below approx. 190 V 400 V class: Stops when DC bus voltage falls below approx. 380 V 600 V class: Stops when DC bus voltage falls below approx. 475 V |
|  | Momentary Power Loss Ride-Thru | Immediately stop after 15 ms or longer power loss ${ }^{<7>}$. Continuous operation during power loss than 2 s (standard) ${ }^{<8>}$ |
|  | Heatsink Overheat Protection | Thermistor |
|  | Braking Resistor Overheat Protection | Overheat input signal for braking resistor (Optional ERF-type, 3\% ED) |
|  | Stall Prevention | Stall Prevention is available during acceleration, deceleration, and during run. |
|  | Ground Protection | Electronic circuit protection ${ }^{<9>}$ |
|  | DC Bus Charge LED | Remains lit until DC bus voltage falls below 50 V |
| Environment | Area of Use | Indoors |
|  | Ambient Temperature | -10 to $40{ }^{\circ} \mathrm{C}$ (IP20/NEMA Type 1 enclosure), -10 to $50{ }^{\circ} \mathrm{C}$ (IP00/Open Type enclosure) |
|  | Humidity | $95 \mathrm{RH} \%$ or less (no condensation) |
|  | Storage Temperature | -20 to $60{ }^{\circ} \mathrm{C}$ (short-term temperature during transportation) |
|  | Altitude | Up to 1000 meters without derating, up to 3000 m with output current and voltage derating. |
|  | Vibration/Shock | $\begin{aligned} & 10 \text { to } 20 \mathrm{~Hz}: 9.8 \mathrm{~m} / \mathrm{s}^{2<10>} \\ & 20 \text { to } 55 \mathrm{~Hz}: 5.9 \mathrm{~m} / \mathrm{s}^{2}(2 \mathrm{~A} 0004 \text { to } 2 \mathrm{~A} 0211,4 \mathrm{~A} 0002 \text { to } 4 \mathrm{~A} 0165 \text {, and 5A0003 to } 5 \mathrm{~A} 0099) \\ & 2.0 \mathrm{~m} / \mathrm{s}^{2}(2 \mathrm{~A} 0250 \text { to } 2 \mathrm{~A} 0415,4 \mathrm{~A} 0208 \text { to } 4 \mathrm{~A} 1200 \text {, and } 5 \mathrm{~A} 0125 \text { to } 5 \mathrm{~A} 0242) \\ & \hline \end{aligned}$ |
| Safety Standard |  | UL 508C, EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, CSA <11> |
| Protection Design |  | IP00/Open Type enclosure, IP20/NEMA Type 1 enclosure ${ }^{\text {<12> }}$ |

$<1>$ Select control modes in accordance with drive capacity.
$<2>$ The accuracy of these values depends on motor characteristics, ambient conditions, and drive settings. Specifications may vary with different motors and with changing motor temperature. Contact Yaskawa for consultation.
$<3>$ Disable Stall Prevention during deceleration (L3-04 = 0) when using a regenerative converter, a regenerative unit, a braking resistor or the Braking Resistor Unit. The default setting for the Stall Prevention function will interfere with the braking resistor.
$<4>$ Instantaneous average deceleration torque refers to the torque required to decelerate the motor (uncoupled from the load) from the rated motor speed down to zero in the shortest time.
<5> Actual specifications may vary depending on motor characteristics.
$<6>$ Overload protection may be triggered when operating with $150 \%$ of the rated output current if the output frequency is less than 6 Hz .
$<7>$ May be shorter due to load conditions and motor speed.
<8> A separate Momentary Power Loss Ride-Thru Unit is required for models 2A0004 to 2A0056 and 4A0002 to 4A0031 if the application needs to continue running for up to 2 seconds during a momentary power loss.
$<9>$ Ground protection cannot be provided when the impedance of the ground fault path is too low, or when the drive is powered up while a ground fault is present at the output.
$<10>$ Models CIMR-AD4A0930 and 4A1200 are rated at $5.9 \mathrm{~m} / \mathrm{s}^{2}$.
$<11>$ Terminals $\mathrm{H} 1, \mathrm{H} 2, \mathrm{DM}+$, and DM- on 600 V class models are designed to the functionality, but are not certified to Insulation coordination: class 1.
$<12>$ Removing the top protective cover or bottom conduit bracket from an IP20/NEMA Type 1 enclosure drive voids NEMA Type 1 protection while maintaining IP20 conformity. This is applicable to models 2A0004 to 2A0211, 4A0002 to 4A0165, and 5A0003 to 5A0242.

## A. 4 Drive Watt Loss Data

## Appendix: B

## Parameter List

This appendix contains a full listing of all parameters and settings available in the drive.
B. 1 A: INITIALIZATION PARAMETERS ..... 188
B. 2 B: APPLICATION ..... 190
B. 3 C: TUNING ..... 196
B. 4 D: REFERENCES ..... 201
B. 5 E: MOTOR PARAMETERS ..... 205
B. 6 F: OPTIONS ..... 210
B. 7 H PARAMETERS: MULTI-FUNCTION TERMINALS ..... 217
B. 8 L: PROTECTION FUNCTION ..... 226
B. 9 N: SPECIAL ADJUSTMENT ..... 233
B. 10 O: OPERATOR-RELATED SETTINGS ..... 236
B. 11 DRIVEWORKSEZ PARAMETERS ..... 238
B. 12 T: MOTOR TUNING ..... 239
B. 13 U: MONITORS. ..... 242

## B. 1 A: Initialization Parameters

## B. 1 A: Initialization Parameters

Table B. 1 Symbols and Icons Used in Parameter Descriptions

| Symbol | Description |
| :---: | :--- |
| Motor 2 | Parameter can be changed during run. |
| Refers to a second motor when the drive is operating two motors. Use multi-function input terminals to switch <br> between motors. |  |

The A parameter group creates the operating environment for the drive. This includes the parameter Access Level, Motor Control Method, Password, User Parameters and more.

## - A1: Initialization

| No. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { A1-00 } \\ (100) \\ <1> \end{gathered}$ | Language Selection | 0: English <br> 1: Japanese <br> 2: German <br> 3: French <br> 4: Italian <br> 5: Spanish <br> 6: Portuguese <br> 7: Chinese | Default: 0 <br> Range: 0 to 7 | - |
|  | Access Level Selection | ```0: View and set A1-01 and A1-04. UD-पПparameters can also be viewed. 1: User Parameters (access to a set of parameters selected by the user, A2-01 to A2-32) 2: Advanced Access (access to view and set all parameters)``` | Default: 2 <br> Range: 0 to 2 | - |
| $\begin{gathered} \mathrm{A} 1-02 \\ (102) \\ <1> \end{gathered}$ | Control Method Selection | 0: V/f Control <br> 1: V/f Control with PG <br> 2: Open Loop Vector Control <br> 3: Closed Loop Vector Control <br> 5: Open Loop Vector Control for PM <br> 6: Advanced Open Loop Vector Control for PM <br> 7: Closed Loop Vector Control for PM <br> Note: PM motor control modes are not available on 600 V class drives, CIMR-A 5 5 $\square \square \square \square \square$. | Default: 2 <br> Range: 0 to 3; 5 to 7 | 92 |
| $\begin{gathered} \text { A1-03 } \\ (103) \end{gathered}$ | Initialize Parameters | 0 : No initialization <br> 1110: User Initialize (parameter values must be stored using parameter o2-03) <br> 2220: 2-Wire initialization <br> 3330: 3-Wire initialization <br> 5550: oPE04 error reset | $\begin{aligned} & \text { Default: } 0 \\ & \text { Range: } 0 \text { to 3330; } \\ & 5550 \end{aligned}$ | 92 |
| $\begin{gathered} \mathrm{A} 1-04 \\ (104) \end{gathered}$ | Password | When the value set into A1-04 does not match the value set into A1-05, parameters A1-01 through A1-03, A1-06, and A2-01 through A2-33 cannot be changed. | Default: 0000 Min.: 0000 Max.: 9999 | - |
| $\underset{(105)}{\mathrm{A} 1-05}$ | Password Setting | When the value set into A1-04 does not match the value set into A1-05, parameters A1-01 through A1-03, A1-06, and A2-01 through A2-33 cannot be changed. | $\begin{aligned} & \text { Default: } 0000 \\ & \text { Min.: } 0000 \\ & \text { Max.: } 9999 \end{aligned}$ | - |
| $\begin{aligned} & \text { A1-06 } \\ & (127) \end{aligned}$ | Application Preset | 0: General-purpose <br> 1: Water supply pump <br> 2: Conveyor <br> 3: Exhaust fan <br> 4: HVAC fan <br> 5: Air compressor | Default: 0 <br> Range: 0 to 5 | - |
| $\begin{gathered} \text { A1-07 } \\ (128) \end{gathered}$ | DriveWorksEZ Function Selection | 0: DWEZ Disabled <br> 1: DWEZ Enabled <br> 2: Digital input (enabled when H1-ロロ = 9F) | Default: 0 <br> Range: 0 to 2 | - |

$<1>$ Parameter setting value is not reset to the default value when the drive is initialized.
$<2>$ Default setting value is dependent on the Application Preset selected with parameter A1-06.

## A2: User Parameters

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :---: | :--- | :--- | :--- | :---: |
| A2-01 to <br> A2-32 <br> $(106$ to <br> $125)$ | User Parameters 1 to 32 | Recently edited parameters are listed here. The user can also select parameters <br> to appear here for quicker access. | Default: $<1>$ <br> Range: b1-01 to <br> o4-13 | - |
| A2-33 <br> $(126)$ | User Parameter Automatic <br> Selection | 0: Parameters A2-01 to A2-32 are reserved for the user to create a list of User <br> Parameters. <br> 1: Save history of recently viewed parameters. Recently edited parameters will <br> be saved to A2-17 through A2-32 for quicker access. | Default: $1<2>$ <br> Range: 0,1 | - |

$<1>$ Default setting value is dependent on the Application Preset selected with parameter A1-06.
$<2>$ Default setting value is dependent on parameter A1-06. Default is 0 when A1-06 $=0$, and 1 when A1-06 $\neq 0$.

## B. 2 b: Application

Application parameters configure the source of the Run command, DC Injection Braking, Speed Search, timer functions, PID control, the Dwell function, Energy Savings, and a variety of other application-related settings.

## b1: Operation Mode Selection

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { b1-01 } \\ & (180) \end{aligned}$ | Frequency Reference Selection 1 | 0: Digital operator <br> 1: Analog input terminals <br> 2: MEMOBUS/Modbus communications <br> 3: Option PCB <br> 4: Pulse input (terminal RP) | Default: 1 <br> Range: 0 to 4 | 93 |
| $\begin{gathered} \text { b1-02 } \\ (181) \end{gathered}$ | Run Command Selection 1 | 0: Digital operator <br> 1: Digital input terminals <br> 2: MEMOBUS/Modbus communications <br> 3: Option PCB | Default: 1 <br> Range: 0 to 3 | 95 |
| $\begin{gathered} \text { b1-03 } \\ (182) \end{gathered}$ | Stopping Method Selection | 0: Ramp to stop <br> 1: Coast to stop <br> 2: DC Injection Braking to stop <br> 3: Coast with timer | Default: 0 <br> Range: 0 to $3^{<1>}$ | 95 |
| $\begin{gathered} \hline \text { b1-04 } \\ (183) \end{gathered}$ | Reverse Operation Selection | 0 : Reverse enabled. <br> 1: Reverse disabled. | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { b1-05 } \\ (184) \end{gathered}$ | Action Selection below Minimum Output Frequency | 0: Operates according to frequency reference (E1-09 is disabled). <br> 1: Output shuts off (coast to stop if less than E1-09). <br> 2: Operates according to E1-09 (frequency reference set to E1-09). <br> 3: Zero speed (frequency reference becomes zero when less than E1-09). | Default: 0 <br> Range: 0 to 3 | - |
| $\begin{gathered} \text { b1-06 } \\ (185) \end{gathered}$ | Digital Input Reading | 0 : Input status is read once and processed immediately (for quicker response) <br> 1: Input is read twice and processed only if the status is the same in both readings (robust against noisy signals) | Default: 1 <br> Range: 0,1 | - |
| $\begin{gathered} \text { b1-07 } \\ (186) \end{gathered}$ | LOCAL/REMOTE Run Selection | 0 : An external Run command must be cycled at the new source in order to be activated. <br> 1: An external Run command at the new source is accepted immediately. | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { b1-08 } \\ & (187) \end{aligned}$ | Run Command Selection in Programming Mode | 0: Run command is not accepted while in Programming Mode. <br> 1: Run command is accepted while in Programming Mode. <br> 2: Prohibit entering Programming Mode during run. | Default: 0 <br> Range: 0 to 2 | - |
| $\begin{aligned} & \text { b1-14 } \\ & \text { (1C3) } \\ & \hline \end{aligned}$ | Phase Order Selection | 0: Standard 1: Switch phase order (reverses the direction of the motor) | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { b1-15 } \\ & \text { (1C4) } \end{aligned}$ | Frequency Reference Selection 2 | Enabled when an input terminal set for "External reference" (H1-पロ = 2) closes. <br> 0 : Digital operator <br> 1: Terminals (analog input terminals) <br> 2: MEMOBUS/Modbus communications <br> 3: Option card <br> 4: Pulse train input | Default: 0 <br> Range: 0 to 4 | - |
| $\begin{aligned} & \text { b1-16 } \\ & \text { (1C5) } \end{aligned}$ | Run Command Selection 2 | Enabled when a terminal set for "External reference" (H1-पロ=2) closes. <br> 0 : Digital operator <br> 1: Digital input terminals <br> 2: MEMOBUS/Modbus communications <br> 3: Option card | Default: 0 <br> Range: 0 to 3 | - |
| $\begin{aligned} & \text { b1-17 } \\ & \text { (1C6) } \end{aligned}$ | Run Command at Power Up | 0: Disregarded. A new Run command must be issued after power up. <br> 1: Allowed. Motor will start immediately after power up if a Run command is already enabled. | Default: 0 <br> Range: 0,1 | - |

$<1>$ Settings 2 and 3 are not available in CLV.

## b2: DC Injection Braking and Short Circuit Braking

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { b2-01 } \\ (189) \end{gathered}$ | DC Injection Braking Start Frequency | Sets the frequency at which DC Injection Braking starts when "Ramp to stop" (b1-03 $=0$ ) is selected. | Default: <1> <br> Min.: 0.0 Hz <br> Max.: 10.0 Hz | 97 |
| $\begin{aligned} & \text { b2-02 } \\ & (18 \mathrm{~A}) \end{aligned}$ | DC Injection Braking Current | Sets the DC Injection Braking current as a percentage of the drive rated current. | Default: 50\% <br> Min.: 0 <br> Max.: 100 | - |
| $\begin{aligned} & \text { b2-03 } \\ & (18 B) \end{aligned}$ | DC Injection Braking Time at Start | Sets DC Injection Braking (Zero Speed Control when in CLV and CLV/PM) time at start. Disabled when set to 0.00 seconds. | Default: 0.00 s <br> Min.: 0.00 <br> Max.: 10.00 | - |
| $\begin{aligned} & \text { b2-04 } \\ & (18 \mathrm{C}) \end{aligned}$ | DC Injection Braking Time at Stop | Sets DC Injection Braking (Zero Speed Control when in CLV and CLV/PM) time at stop. | Default: <1> <br> Min.: 0.00 s <br> Max.: 10.00 s | - |
| $\begin{gathered} \text { b2-08 } \\ (190) \end{gathered}$ | Magnetic Flux <br> Compensation Value | Sets the magnetic flux compensation as a percentage of the no-load current value (E2-03). | Default: 0\% <br> Min.: 0 <br> Max.: 1000 | - |
| $\begin{aligned} & \text { b2-12 } \\ & \text { (1BA) } \end{aligned}$ | Short Circuit Brake Time at Start | Sets the time for Short Circuit Braking operation at start. ${ }^{<2>}$ | $\begin{aligned} & \text { Default: } 0.00 \mathrm{~s} \\ & \text { Min.: } 0.00 \\ & \text { Max.: } 25.50 \end{aligned}$ | - |
| $\begin{aligned} & \text { b2-13 } \\ & \text { (1BB) } \end{aligned}$ | Short Circuit Brake Time at Stop | Sets the Short Circuit Braking operation time at stop. ${ }^{<2>}$ | $\begin{array}{\|l} \text { Default: } 0.50 \mathrm{~s} \\ \text { Min.: } 0.00 \\ \text { Max.: } 25.50 \\ \hline \end{array}$ | - |
| $\begin{gathered} \text { b2-18 } \\ (177) \end{gathered}$ | Short Circuit Braking Current | Determines the current level for Short Circuit Braking. Set as a percentage of the motor rated current. | Default: 100.0\% <br> Min.: 0.0 <br> Max.: 200.0 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.
$<2>$ A coasting motor may require a braking resistor circuit to bring the motor to a stop in the required time.

## - b3: Speed Search

| No. (Addr Hex.) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { b3-01 } \\ (191) \end{gathered}$ | Speed Search Selection at Start | 0: Disabled <br> 1: Enabled | Default: <1> <br> Range: 0,1 | 98 |
| $\begin{gathered} \text { b3-02 } \\ (192) \end{gathered}$ | Speed Search Deactivation Current | Sets the current level at which the speed is assumed to be detected and Speed Search is ended. Set as a percentage of the drive rated current. | Default: <1> <br> Min.: 0\% <br> Max.: 200\% | - |
| $\begin{aligned} & \text { b3-03 } \\ & \text { (193) } \end{aligned}$ | Speed Search Deceleration Time | Sets output frequency reduction time during Speed Search. | Default: 2.0 s <br> Min.: 0.1 <br> Max.: 10.0 | - |
| $\begin{aligned} & \text { b3-04 } \\ & (194) \end{aligned}$ | V/f Gain during Speed Search | Determines how much to lower the V/f ratio during Speed Search. Output voltage during Speed Search equals the V/f setting multiplied by b3-04. <br> Note: Available control mode for parameter b3-04 varies by drive model: CIMR-AD2A0004 to 2A0415, 4A0002 to 4A0675, and 5A0003 to 5A0242: Available when A1-02 = 0, 1 <br> CIMR-AD4A0930 and 4A1200: Available when A1-02 $=0$ | Default: <2> <br> Min.: 10\% <br> Max.: 100\% | - |
| $\begin{aligned} & \text { b3-05 } \\ & (195) \end{aligned}$ | Speed Search Delay Time | When using an external contactor on the output side, b3-05 delays executing Speed Search after a momentary power loss to allow time for the contactor to close. | $\begin{aligned} & \text { Default: } 0.2 \mathrm{~s} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 100.0 \end{aligned}$ | - |
| $\begin{aligned} & \text { b3-06 } \\ & (196) \end{aligned}$ | Output Current 1 during Speed Search | Sets the current injected to the motor at the beginning of Speed Estimation Speed Search. Set as a coefficient for the motor rated current. | Default: <2> <br> Min.: 0.0 <br> Max.: 2.0 | - |
| $\begin{aligned} & \text { b3-10 } \\ & \text { (19A) } \end{aligned}$ | Speed Search Detection Compensation Gain | Sets the gain which is applied to the speed detected by Speed Estimation Speed Search before the motor is reaccelerated. Increase this setting if ov occurs when performing Speed Search after a relatively long period of baseblock. | Default: 1.05 <br> Min.: 1.00 <br> Max.: 1.20 | - |
| $\begin{aligned} & \text { b3-14 } \\ & (19 E) \end{aligned}$ | Bi-Directional Speed Search Selection | 0 : Disabled (uses the direction of the frequency reference) <br> 1: Enabled (drive detects which way the motor is rotating) | Default: <1> Range: 0,1 | - |

## B. 2 b: Application

| No. <br> (Addr <br> Hex.) | Name | Description | Values | Page |
| :--- | :--- | :--- | :--- | :--- |
| b3-17 <br> (1F0) | Speed Search Restart <br> Current Level | Sets the Speed Search restart current level as a percentage of the drive rated <br> current. | Default: $150 \%$ <br> Min.: 0 <br> Max.: 200 | - |
| b3-18 <br> (1F1) | Speed Search Restart <br> Detection Time | Sets the time to detect Speed Search restart. | Default: 0.10 s <br> Min.: 0.00 <br> Max.: 1.00 | - |
| b3-19 <br> (1F2) | Number of Speed Search <br> Restarts | Sets the number of times the drive can attempt to restart when performing <br> Speed Search. | Default: 3 <br> Min.: 0 <br> Max.: 10 | Default: 0 <br> Range: 0,1 |
| b3-24 <br> (1C0) | Speed Search Method <br> Selection | 0: Current Detection <br> 1: Speed Estimation | - |  |
| b3-25 <br> (1C8) | Speed Search Wait Time | Sets the time the drive must wait between each Speed Search restart attempt. | Default: 0.5 s <br> Min.: 0.0 <br> Max.: 30.0 | - |
| b3-27 <br> (1C9) | Start Speed Search Select | Selects a condition to activate Speed Search Selection at Start (b3-01) or <br> External Speed Search Command 1 or 2 from the multi-function input. <br> $0:$ Triggered when a Run command is issued (normal). <br> 1: Triggered when an external baseblock is released. | Default: 0 <br> Range: 0,1 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.
$<2>$ Default setting is dependent on parameter o2-04, Drive Model Selection.

## b4: Timer Function

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :---: | :--- | :--- | :--- | :--- |
| b4-01 <br> (1A3) | Timer Function On-Delay <br> Time | Sets the on-delay and off-delay times for a digital timer output <br> (H2- $\square \square=12)$. <br> The output is triggered by a digital input programmed to <br> H1- $\square=18)$. | Default: 0.0 s <br> Min.: 0.0 <br> Max.: 3000.0 | - |
| b4-02 <br> (1A4) | Timer Function Off-Delay <br> Time | Default: 0.0 s <br> Min.: 0.0 <br> Max.: 3000.0 | - |  |

## b5: PID Control

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { b5-01 } \\ & \text { (1A5) } \end{aligned}$ | PID Function Setting | 0: Disabled <br> 1: Enabled (PID output becomes output frequency reference, deviation D controlled) <br> 2: Enabled (PID output becomes output frequency reference, feedback D controlled) <br> 3: Enabled (PID output added to frequency reference, deviation D controlled) <br> 4: Enabled (PID output added to frequency reference, feedback D controlled) | Default: 0 <br> Range: 0 to 4 | - |
| $\begin{aligned} & \text { b5-02 } \\ & (1 \mathrm{~A} 6) \\ & \text { ©RuN } \end{aligned}$ | Proportional Gain Setting $(\mathrm{P})$ | Sets the proportional gain of the PID controller. | Default: 1.00 <br> Min.: 0.00 <br> Max.: 25.00 | - |
| $\begin{aligned} & \text { b5-03 } \\ & \text { (1A7) } \end{aligned}$ | Integral Time Setting (I) | Sets the integral time for the PID controller. | Default: 1.0 s <br> Min.: 0.0 <br> Max.: 360.0 | - |
| $\begin{aligned} & \text { b5-04 } \\ & (1 \mathrm{~A} 8) \end{aligned}$ | Integral Limit Setting | Sets the maximum output possible from the integrator as a percentage of the maximum output frequency. | Default: 100.0\% Min.: 0.0 Мах.: 100.0 | - |
| $\begin{aligned} & \text { b5-05 } \\ & (1 \mathrm{~A} 9) \end{aligned}$ | Derivative Time (D) | Sets D control derivative time. | $\begin{aligned} & \text { Default: } 0.00 \mathrm{~s} \\ & \text { Min.: } 0.00 \\ & \text { Max.: } 10.00 \end{aligned}$ | - |
| $\begin{aligned} & \text { b5-06 } \\ & (1 \mathrm{AA}) \end{aligned}$ | PID Output Limit | Sets the maximum output possible from the entire PID controller as a percentage of the maximum output frequency. | Default: 100.0\% <br> Min.: 0.0 <br> Max.: 100.0 | - |

| No. (Addr Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { b5-07 } \\ & (1 \mathrm{AB}) \end{aligned}$ | PID Offset Adjustment | Applies an offset to the PID controller output. Set as a percentage of the maximum output frequency. | $\begin{aligned} & \text { Default: 0.0\% } \\ & \text { Min.: -100.0 } \\ & \text { Max.: } 100.0 \end{aligned}$ | - |
| $\begin{aligned} & \text { b5-08 } \\ & (1 \mathrm{AC}) \\ & \text { ©RUN } \end{aligned}$ | PID Primary Delay Time Constant | Sets a low pass filter time constant on the output of the PID controller. | Default: 0.00 s <br> Min.: 0.00 <br> Max.: 10.00 | - |
| $\begin{aligned} & \text { b5-09 } \\ & \text { (1AD) } \end{aligned}$ | PID Output Level Selection | 0: Normal output (direct acting) <br> 1: Reverse output (reverse acting) | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { b5-10 } \\ & \text { (1AE) } \end{aligned}$ | PID Output Gain Setting | Sets the gain applied to the PID output. | Default: 1.00 <br> Min.: 0.00 <br> Max.: 25.00 | - |
| $\begin{aligned} & \text { b5-11 } \\ & (1 \mathrm{AF}) \end{aligned}$ | PID Output Reverse Selection | 0: Negative PID output triggers zero limit. <br> 1: Rotation direction reverses with negative PID output. <br> Note: When using setting 1, make sure reverse operation is permitted by b1-04. | Default: 0 <br> Range: 0, 1 | - |
| b5-12 <br> (1B0) | PID Feedback Loss Detection Selection | 0: No fault. Digital output only. <br> 1: Fault detection. Alarm output, drive continues operation. <br> 2: Fault detection. Fault output, drive output is shut off. <br> 3: No fault. Digital output only. No fault detection when PID control is disabled. <br> 4: Fault detection. Alarm is triggered and drive continues to run. Fault detection even when PID is disabled. <br> 5: Fault detection. Drive output shuts off. No fault detection when PID control is disabled. | Default: 0 <br> Range: 0 to 5 | - |
| $\begin{aligned} & \text { b5-13 } \\ & \text { (1B1) } \end{aligned}$ | PID Feedback Loss Detection Level | Sets the PID feedback loss detection level as a percentage of the maximum output frequency. | Default: 0\% <br> Min.: 0 <br> Max.: 100 | - |
| b5-14 <br> (1B2) | PID Feedback Loss Detection Time | Sets a delay time for PID feedback loss. | $\begin{aligned} & \text { Default: } 1.0 \mathrm{~s} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 25.5 \end{aligned}$ | - |
| $\begin{aligned} & \text { b5-15 } \\ & \text { (1B3) } \end{aligned}$ | PID Sleep Function Start Level | Sets the frequency level that triggers the sleep function. | Default: <1> <br> Min.: 0.0 Hz <br> Max.: 400.0 Hz | - |
| $\begin{aligned} & \text { b5-16 } \\ & \text { (1B4) } \end{aligned}$ | PID Sleep Delay Time | Sets a delay time before the sleep function is triggered. | $\begin{aligned} & \text { Default: } 0.0 \mathrm{~s} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 25.5 \end{aligned}$ | - |
| $\begin{aligned} & \text { b5-17 } \\ & \text { (1B5) } \end{aligned}$ | PID Accel/Decel Time | Sets the acceleration and deceleration time to PID setpoint. | $\begin{aligned} & \text { Default: } 0.0 \mathrm{~s} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 6000.0 \\ & \hline \end{aligned}$ | - |
| $\begin{aligned} & \text { b5-18 } \\ & \text { (1DC) } \end{aligned}$ | PID Setpoint Selection | 0: Disabled <br> 1: Enabled | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { b5-19 } \\ & \text { (1DD) } \end{aligned}$ | PID Setpoint Value | Sets the PID target value when $\mathrm{b} 5-18=1$. Set as a percentage of the maximum output frequency. | Default: 0.00\% <br> Min.: 0.00 <br> Max.: 100.00 | - |
| $\begin{aligned} & \text { b5-20 } \\ & \text { (1E2) } \end{aligned}$ | PID Setpoint Scaling | 0: 0.01 Hz units <br> 1: $0.01 \%$ units $(100 \%=$ max output frequency $)$ <br> 2: $\mathrm{r} / \mathrm{min}$ (number of motor poles must entered) <br> 3: User-set (set scaling to b5-38 and b5-39) | Default: 1 <br> Range: 0 to 3 | - |
| b5-34 <br> (19F) <br> ©RUN | PID Output Lower Limit | Sets the minimum output possible from the PID controller as a percentage of the maximum output frequency. | $\begin{aligned} & \text { Default: } 0.00 \% \\ & \text { Min.: -100.00 } \\ & \text { Max.: 100.00 } \end{aligned}$ | - |
| $\begin{aligned} & \text { b5-35 } \\ & (1 \mathrm{~A} 0) \\ & \diamond \text { RUN } \end{aligned}$ | PID Input Limit | Limits the PID control input (deviation signal) as a percentage of the maximum output frequency. Acts as a bipolar limit. | $\begin{aligned} & \text { Default: } 1000.0 \% \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 1000.0 \end{aligned}$ | - |
| $\begin{aligned} & \text { b5-36 } \\ & (1 \mathrm{~A} 1) \end{aligned}$ | PID Feedback High Detection Level | Sets the PID feedback high detection level as a percentage of the maximum output frequency. | $\begin{aligned} & \text { Default: } 100 \% \\ & \text { Min.: } 0 \\ & \text { Max.: } 100 \end{aligned}$ | - |
| $\begin{aligned} & \text { b5-37 } \\ & \text { (1A2) } \end{aligned}$ | PID Feedback High Detection Time | Sets the PID feedback high level detection delay time. | $\begin{aligned} & \text { Default: } 1.0 \mathrm{~s} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 25.5 \end{aligned}$ | - |

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { b5-38 } \\ & \text { (1FE) } \end{aligned}$ | PID Setpoint User Display | Sets the display value of U5-01 and U5-04 when the maximum frequency is output. | Default: <2> <br> Min.: 1 <br> Max.: 60000 | - |
| $\begin{aligned} & \text { b5-39 } \\ & \text { (1FF) } \end{aligned}$ | PID Setpoint Display Digits | 0: No decimal places <br> 1: One decimal place <br> 2: Two decimal places <br> 3: Three decimal places | Default: <2> <br> Range: 0 to 3 | - |
| $\begin{aligned} & \text { b5-40 } \\ & \text { (17F) } \end{aligned}$ | Frequency Reference Monitor Content during PID | 0: Display the frequency reference (U1-01) after PID compensation has been added. <br> 1: Display the frequency reference (U1-01) before PID compensation has been added. | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { b5-47<3> } \\ (17 \mathrm{D}) \end{gathered}$ | Reverse Operation Selection 2 by PID Output | Reverse operation selection when $\mathrm{b} 5-01=3$ or 4 . <br> 0: Zero limit when PID output is a negative value. <br> 1: Reverse operation when PID output is a negative value (Zero limit if the reverse operation is prohibited by b1-04). <br> Note: This parameter is not available in models CIMR-AD4A0930 and 4A1200. | Default: 1 <br> Range: 0,1 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.
$<2>$ Default setting is dependent on parameter b5-20, PID Setpoint Scaling.
$<3>$ Available in drive software versions 1015 and later.

## - b6: Dwell Function

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| b6-01 <br> (1B6) | Dwell Reference at Start | Parameters b6-01 and b6-02 set the frequency to hold and the time to maintain that frequency at start. | $\begin{aligned} & \text { Default: } 0.0 \mathrm{~Hz} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 400.0 \end{aligned}$ | - |
| $\begin{aligned} & \text { b6-02 } \\ & \text { (1B7) } \end{aligned}$ | Dwell Time at Start |  | $\begin{aligned} & \hline \text { Default: } 0.0 \mathrm{~s} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 10.0 \end{aligned}$ | - |
| $\begin{aligned} & \text { b6-03 } \\ & \text { (1B8) } \end{aligned}$ | Dwell Reference at Stop | Parameters b6-03 and b6-04 set the frequency to hold and the time to maintain that frequency at stop. | $\begin{aligned} & \text { Default: } 0.0 \mathrm{~Hz} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 400.0 \end{aligned}$ | - |
| $\begin{aligned} & \text { b6-04 } \\ & \text { (1B9) } \end{aligned}$ | Dwell Time at Stop |  | $\begin{aligned} & \hline \text { Default: } 0.0 \mathrm{~s} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 10.0 \end{aligned}$ | - |

## b7: Droop Control

| No. (Addr Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { b7-01 } \\ (1 \mathrm{CA}) \\ \text { BRUN } \end{gathered}$ | Droop Control Gain | Sets the speed reduction gain applied at a torque reference of $100 \%$. Set as a percentage of motor base speed. | Default: 0.0\% <br> Min.: 0.0 <br> Max.: 100.0 | - |
| $\begin{aligned} & \text { b7-02 } \\ & (1 \mathrm{CB}) \end{aligned}$ | Droop Control Delay Time | Adjusts the responsiveness of Droop Control. | Default: 0.05 s <br> Min.: 0.03 <br> Max.: 2.00 | - |
| $\begin{aligned} & \text { b7-03 } \\ & (17 \mathrm{E}) \\ & <1> \end{aligned}$ | Droop Control Limit Selection | 0: Disabled <br> 1: Enabled | Default: 1 <br> Range: 0, 1 | - |

$<1>$ Available in drive software versions 1015 and later.

## b8：Energy Saving

| No． （Addr． Hex） | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { b8-01 } \\ & \text { (1CC) } \end{aligned}$ | Energy Saving Control Selection | 0：Disabled <br> 1：Enabled | Default：＜1＞ Range： 0,1 | － |
| $\begin{aligned} & \text { b8-02 } \\ & \text { (1CD) } \end{aligned}$ | Energy Saving Gain | Sets the gain used for Energy Saving． | Default：＜1＞ <br> Min．： 0.0 <br> Max．： 10.0 | － |
| b8－03 <br> （1CE） <br> $\triangle$ ®un | Energy Saving Control Filter Time Constant | Sets a time constant for Energy Saving． | Default：＜2＞ <br> Min．： 0.00 s <br> Max．： 10.00 s | － |
| $\begin{aligned} & \text { b8-04 } \\ & (1 \mathrm{CF}) \end{aligned}$ | Energy Saving Coefficient Value | Determines the level of maximum motor efficiency．Setting range is 0.0 to 2000.0 for drives 3.7 kW and smaller．The display resolution depends on the rated output power of the drive after the Drive Duty has been set in parameter C6－01． | Default：＜3＞＜4＞ <br> Min．： 0.00 <br> Max．： 655.00 | － |
| $\begin{aligned} & \text { b8-05 } \\ & \text { (1D0) } \end{aligned}$ | Power Detection Filter Time | Sets a time constant filter for output power detection． | Default： 20 ms <br> Min．： 0 <br> Max．： 2000 | － |
| $\begin{aligned} & \text { b8-06 } \\ & \text { (1D1) } \end{aligned}$ | Search Operation Voltage Limit | Sets the limit for the voltage search operation as a percentage of the motor rated voltage． | Default：0\％ <br> Min．： 0 <br> Max．： 100 | － |
| $\begin{aligned} & \text { b8-16 } \\ & (188) \end{aligned}$ | Energy Saving Parameter （Ki）for PM Motors | Coefficient to adjust torque linearity． <br> Set to the Ki value on the motor nameplate． <br> When parameter E5－01，Motor Code Selection，is set to 1ロロロ or 2口ロロ， the automatically calculated value will be set．This set value cannot be changed． <br> Note：This parameter is not available in models CIMR－AD4A0930 and 4A1200． | Default： 1.00 <br> Min．： 0.00 <br> Max．： 2.00 | － |
| $\begin{aligned} & \text { b8-17 } \\ & \text { (1F9) } \end{aligned}$ | Energy Saving Parameter $(\mathrm{Kt})$ for PM Motors | Coefficient to adjust torque linearity． <br> Set to the Kt value on the motor nameplate． <br>  the automatically calculated value will be set．This set value cannot be changed． <br> Note：This parameter is not available in models CIMR－AD4A0930 and 4A1200． | Default： 1.00 <br> Min．： 0.00 <br> Мах．： 2.00 | － |

$<1>$ Default setting is determined by parameter A1－02，Control Method Selection．
$<2>$ Default setting is dependent on parameters A1－02，Control Method Selection，C6－01，Drive Duty Selection，and o2－04，Drive Model Selection．
$<3>$ Default setting is dependent on parameter 02－04，Drive Model Selection，and C6－01，Drive Duty Selection．
$<4>$ Parameter value changes automatically if E2－11 is manually changed or changed by Auto－Tuning．
＜5＞Available in drive software versions 1015 and later．

## b9：Zero Servo

| No． <br> （Addr． <br> Hex） | Name | Description | Values | Page |
| :---: | :--- | :--- | :--- | :--- |
| b9－01 <br> （1DA） | Zero Servo Gain | Sets the position loop gain for the Zero Servo function． | Default： 5 <br> Min．： 0 <br> Max．： 100 |  |
| b9－02 <br> （1DB） | Zero Servo Completion <br> Width | Sets the range to trigger an output terminal set for＂Zero Servo Complete＂＂ <br> during Zero Servo operation． | Default： 10 <br> Min．： 0 <br> Max．： 16383 | - |

## B. 3 C: Tuning

C parameters are used to adjust the acceleration and deceleration times, S-curves, slip compensation, torque compensation, and carrier frequency selections.

## C1: Acceleration and Deceleration Times

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { C1-01 } \\ & (200) \\ & \hline \text { RuN } \end{aligned}$ | Acceleration Time 1 | Sets the time to accelerate from 0 to maximum frequency. | Default: 10.0 s <br> Min.: 0.0 <br> Max.: 6000.0 ${ }^{<1>}$ | 99 |
| $\begin{aligned} & \hline \text { C1-02 } \\ & (201) \\ & \Delta_{\text {RuN }} \end{aligned}$ | Deceleration Time 1 | Sets the time to decelerate from maximum frequency to 0 . |  | 99 |
| $\begin{aligned} & \hline \text { C1-03 } \\ & (202) \\ & \hline \nabla_{\text {RuN }} \end{aligned}$ | Acceleration Time 2 | Sets the time to accelerate from 0 to maximum frequency. | Default: 10.0 s <br> Min.: 0.0 <br> Max.: 6000.0<1> | 99 |
| $\begin{aligned} & \mathrm{C} 1-04 \\ & (203) \\ & \overbrace{\text { RUN }} \end{aligned}$ | Deceleration Time 2 | Sets the time to decelerate from maximum frequency to 0 . |  | 99 |
| $\begin{aligned} & \text { C1-05 } \\ & \text { (204) } \\ & \hline \text { ®RUN } \end{aligned}$ | Acceleration Time 3 (Motor 2 Accel Time 1) | Sets the time to accelerate from 0 to maximum frequency. | Default: 10.0 s <br> Min.: 0.0 <br> Max.: 6000.0<1> | 99 |
| $\begin{aligned} & \text { C1-06 } \\ & \text { (205) } \end{aligned}$ | Deceleration Time 3 (Motor <br> 2 Decel Time 1) | Sets the time to decelerate from maximum frequency to 0 . |  | 99 |
| $\begin{aligned} & \text { C1-07 } \\ & (206) \\ & \square \text { RuN } \end{aligned}$ | Acceleration Time 4 (Motor 2 Accel Time 2) | Sets the time to accelerate from 0 to maximum frequency. | Default: 10.0 s <br> Min.: 0.0 <br> Max.: $6000.0^{<1>}$ | 99 |
| $\begin{aligned} & \text { C1-08 } \\ & (207) \\ & \hline \text { R RUN } \end{aligned}$ | Deceleration Time 4 (Motor <br> 2 Decel Time 2) | Sets the time to decelerate from maximum frequency to 0 . |  | 99 |
| $\begin{gathered} \text { C1-09 } \\ (208) \end{gathered}$ | Fast Stop Time | Sets the time for the Fast Stop function. | Default: 10.0 s <br> Min.: 0.0 <br> Max.: $6000.0^{<1>}$ | - |
| $\begin{gathered} \text { C1-10 } \\ \text { (209) } \end{gathered}$ | Accel/Decel Time Setting Units | $\begin{aligned} & 0: 0.01 \mathrm{~s}(0.00 \text { to } 600.00 \mathrm{~s}) \\ & 1: 0.1 \mathrm{~s}(0.0 \text { to } 6000.0 \mathrm{~s}) \end{aligned}$ | Default: 1 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { C1-11 } \\ & (20 \mathrm{~A}) \end{aligned}$ | Accel/Decel Time Switching Frequency | Sets the frequency to switch between accel/decel time settings | Default: 0.0 Hz <br> Min.: 0.0 <br> Max.: 400.0 | - |

$<1>$ Setting range value is dependent on parameter C1-10, Accel/Decel Time Setting Units. When C1-10 $=0$ (units of 0.01 seconds), the setting range becomes 0.00 to 600.00 seconds.

## C2: S-Curve Characteristics

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { C2-01 } \\ & \text { (20B) } \end{aligned}$ | S-Curve Characteristic at Accel Start | The S-curve can be controlled at the four points shown below. | Default: 0.20 s <l> <br> Min.: 0.00 <br> Max.: 10.00 | - |
| $\begin{aligned} & \text { C2-02 } \\ & \text { (20C) } \end{aligned}$ | S-Curve Characteristic at Accel End |  | Default: 0.20 s <br> Min.: 0.00 <br> Max.: 10.00 | - |
| $\begin{aligned} & \text { C2-03 } \\ & \text { (20D) } \end{aligned}$ | S-Curve Characteristic at Decel Start |  | Default: 0.20 s <br> Min.: 0.00 <br> Max.: 10.00 | - |
| $\begin{aligned} & \text { C2-04 } \\ & \text { (20E) } \end{aligned}$ | S-Curve Characteristic at Decel End |  | Default: 0.00 s <br> Min.: 0.00 <br> Max.: 10.00 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.

## - C3: Slip Compensation

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { C3-01 } \\ & (20 \mathrm{~F}) \\ & \text { ®RUN } \end{aligned}$ | Slip Compensation Gain | Sets the gain for the motor slip compensation function used for motor 1. | Default: <1> <br> Min.: 0.0 <br> Max.: 2.5 | - |
| $\begin{aligned} & \text { C3-02 } \\ & (210) \\ & \text { 『RUN } \end{aligned}$ | Slip Compensation Primary Delay Time | Adjusts the slip compensation function delay time used for motor 1. | Default: <1> <br> Min.: 0 ms <br> Max.: 10000 ms | - |
| $\begin{aligned} & \text { C3-03 } \\ & (211) \end{aligned}$ | Slip Compensation Limit | Sets an upper limit for the slip compensation function as a percentage of motor rated slip for motor 1 (E2-02). | $\begin{aligned} & \text { Default: } 200 \% \\ & \text { Min.: } 0 \\ & \text { Max.: } 250 \end{aligned}$ | - |
| $\begin{aligned} & \text { C3-04 } \\ & (212) \end{aligned}$ | Slip Compensation Selection during Regeneration | $\begin{array}{\|l} \hline \text { 0: Disabled. } \\ \text { 1: Enabled above } 6 \mathrm{~Hz} \text {. } \\ \text { 2: Enabled whenever slip compensation is possible. } \\ \hline \end{array}$ | Default: 0 <br> Range: 0 to 2 | - |
| $\begin{aligned} & \text { C3-05 } \\ & (213) \end{aligned}$ | Output Voltage Limit Operation Selection | 0: Disabled. <br> 1: Enabled. Automatically decreases motor flux when output voltage saturation is reached. <br> Note: Available control mode for parameter C3-05 varies by drive model: CIMR-AD2A0004 to 2A0415, 4A0002 to 4A0675, and 5A0003 to 5 A 0242 : Available when $\mathrm{A} 1-02=0,1$. CIMR-AD4A0930 and 4A1200: Available when A1-02 $=2,3,6$, 7. | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { C3-16 } \\ (261) \end{gathered}$ | Output Voltage Limit Operation Start Level (Percentage Modulation) | Sets the output voltage limit operation start level (percentage modulation) when C3-05 is enabled. <br> Note: This parameter is only available in models CIMR-A $\square 4 A 0930$ and 4A1200. | Default: 85.0\% <br> Min.: 70.0 <br> Мах.: 90.0 | - |
| $\begin{gathered} \text { C3-17 } \\ (262) \end{gathered}$ | Maximum Output Voltage Limit Level (Percentage Modulation) | Sets the output voltage limit operation determined by C3-18 (percentage modulation) when C3-05 is enabled. <br> Note: This parameter is only available in models CIMR-AD4A0930 and 4A1200. | $\begin{aligned} & \text { Default: } 90.0 \% \\ & \text { Min.: } 85.0 \\ & \text { Max.: } 100.0 \end{aligned}$ | - |
| $\begin{gathered} \text { C3-18 } \\ (263) \end{gathered}$ | Output Voltage Limit Level | Sets the maximum percentage of output voltage reduction when C3-05 is enabled. <br> Note: This parameter is only available in models CIMR-AD4A0930 and 4A1200. | Default: 90.0\% <br> Min.: 30.0 <br> Max.: 100.0 | - |
| $\begin{aligned} & \text { C3-21 } \\ & (33 \mathrm{E}) \\ & \hline \end{aligned}$ | Motor 2 Slip Compensation Gain | Sets the slip compensation gain used for motor 2 . | $\begin{aligned} & \text { Default: <2> } \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 2.5 \end{aligned}$ | - |
| $\begin{aligned} & \text { C3-22 } \\ & (241) \\ & \hline \text { RUNN } \end{aligned}$ | Motor 2 Slip Compensation Primary Delay Time | Sets the slip compensation delay time used for motor 2. | Default: <2> <br> Min.: 0 ms <br> Max.: 10000 ms | - |

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :---: | :--- | :--- | :--- | :---: |
| C3-23 <br> (242) | Motor 2 Slip Compensation <br> Limit | Sets the upper limit for the slip compensation function for motor 2. Set as a <br> percentage of the motor rated slip (E4-02). | Default: 200\% <br> Min.: 0 <br> Max.: 250 | - |
| C3-24 <br> (243) | Motor 2 Slip Compensation <br> Selection During <br> Regeneration | 0: Disabled. <br> 1: Enabled above 6 Hz. <br> 2: Enabled whenever slip compensation is possible. | Default: 0 <br> Range: 0 to 2 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.
$<2>$ Default setting is determined by parameter E3-01, Motor 2 Control Mode Selection.

## - C4: Torque Compensation

| No. (Addr Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { C4-01 } \\ & (215) \\ & ه \text { RUN } \end{aligned}$ | Torque Compensation Gain | Sets the gain for the automatic torque (voltage) boost function and helps to produce better starting torque. Used for motor 1. | Default: <1> <br> Min.: 0.00 <br> Max.: 2.50 | - |
| $\begin{aligned} & \hline \text { C4-02 } \\ & (216) \\ & \hline \Delta \text { RUN } \end{aligned}$ | Torque Compensation Primary Delay Time 1 | Sets the torque compensation filter time. | Default: <2> <br> Min.: 0 ms <br> Max.: 60000 ms | - |
| $\begin{gathered} \text { C4-03 } \\ (217) \end{gathered}$ | Torque Compensation at Forward Start | Sets torque compensation at forward start as a percentage of motor torque. | Default: 0.0\% <br> Min.: 0.0 <br> Max.: 200.0 | - |
| $\begin{gathered} \text { C4-04 } \\ (218) \end{gathered}$ | Torque Compensation at Reverse Start | Sets torque compensation at reverse start as a percentage of motor torque. | $\begin{aligned} & \text { Default: } 0.0 \% \\ & \text { Min.: -200.0 } \\ & \text { Max.: } 0.0 \end{aligned}$ | - |

| $\begin{aligned} & \text { C5-27 } \\ & (35 \mathrm{C}) \end{aligned}$ | Motor 2 ASR Gain Switching Frequency | Sets the frequency for motor 2 used to switch between proportional gain 1 and 2 , and between the integral time 1 and 2 . | $\begin{aligned} & \text { Default: } 0.0 \mathrm{~Hz} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 400.0 \end{aligned}$ | - |
| $\begin{aligned} & \text { C5-28 } \\ & (35 \mathrm{D}) \end{aligned}$ | Motor 2 ASR Integral Limit | Sets the ASR integral upper limit for motor 2 as a percentage of rated load torque. | $\begin{array}{\|l} \text { Default: } 400 \% \\ \text { Min.: } 0 \\ \text { Max.: } 400 \end{array}$ | - |
| $\begin{gathered} \text { C5-32 } \\ (361) \end{gathered}$ | Integral Operation during Accel/Decel for Motor 2 | 0 : Disabled. Integral functions for motor 2 are enabled only during constant speed. <br> 1: Enabled. Integral functions are always enabled for motor 2, during accel/ decel and during constant speed. | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { C5-37 } \\ (278) \end{gathered}$ | Motor 2 Inertia | Sets the inertia of motor 2 alone without the load. This value is automatically set during ASR or Inertia Auto-Tuning. | Default: <br> Min.: $0.0001 \mathrm{kgm}^{2}$ <br> Max.: $600.00 \mathrm{kgm}^{2}$ | - |
| $\begin{gathered} \text { C5-38 } \\ (279) \end{gathered}$ | Motor 2 Load Inertia Ratio | Sets the ratio between the motor 2 and machine inertia. This value is automatically set during ASR or Inertia Auto-Tuning. | Default: 1.0 <br> Min.: 0.0 <br> Max.: 6000.0 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.
$<2>$ The setting range is 1.00 to 300.00 in CLV and AOLV/PM control modes.
$<3>$ Default setting is dependent on parameter E5-01, Motor Code Selection.
$<4>$ Default setting is dependent on parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
$<5>$ Default setting is determined by parameter E3-01, Motor 2 Control Mode Selection.

## B. 3 C: Tuning

## C6: Carrier Frequency

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \hline \text { C6-01 } \\ (223) \end{gathered}$ | Drive Duty Selection | 0: Heavy Duty (HD) for constant torque applications. 1: Normal Duty (ND) for variable torque applications. | Default: 1 <br> Range: 0,1 | 100 |
| $\begin{gathered} \text { C6-02 } \\ (224) \end{gathered}$ | Carrier Frequency Selection | ```1: 2.0 kHz 2: 5.0 kHz 3: 8.0 kHz 4: 10.0 kHz 5: 12.5 kHz 6: 15.0 kHz 7: Swing PWM1 (Audible sound 1) 8: Swing PWM2 (Audible sound 2) 9: Swing PWM3 (Audible sound 3) A: Swing PWM4 (Audible sound 4) B to E: No setting possible F: User-defined (determined by C6-03 through C6-05) \\ Note: The available settings are 1, 2, and F for models CIMR-AD4A0930 and 4A1200.``` | Default: <1> <br> Range: 1 to 9; $\mathrm{A}, \mathrm{~F}$ | 101 |
| $\begin{gathered} \text { C6-03 } \\ (225) \end{gathered}$ | Carrier Frequency Upper Limit | Note: C6-04 and C6-05 are available only in V/f and V/f w/PG control modes. <br> Determines the upper and lower limits for the carrier frequency. In OLV, C6-03 determines the upper limit of the carrier frequency. <br> Note: The setting range is 1.0 to 5.0 kHz for models CIMR-A $\square 4 \mathrm{~A} 0930$ and 4A1200. | Default: <2> <br> Min.: 1.0 kHz <br> Max.: 15.0 kHz | - |
| $\begin{gathered} \text { C6-04 } \\ (226) \end{gathered}$ | Carrier Frequency Lower Limit |  | Default: <2> <br> Min.: 1.0 kHz <br> Max.: 15.0 kHz | - |
| $\begin{gathered} \text { C6-05 } \\ (227) \end{gathered}$ | Carrier Frequency Proportional Gain |  | Min.: 0 <br> Max.: 99 | - |
| $\begin{gathered} \text { C6-09 } \\ \text { (22B) } \end{gathered}$ | Carrier Frequency during Rotational Auto-Tuning | 0: Carrier Frequency $=5 \mathrm{kHz}$ <br> 1: Setting value for C6-03 <br> Note: This parameter is not available in models CIMR-AD4A0930 and 4A1200. | Default: 0 <br> Range: 0,1 | - |

$<1>$ Default setting value is dependent on parameters A1-02, Control Method Selection, C6-01, Drive Duty Selection, and 02-04, Drive Model Selection.
$<2>$ Default setting value is dependent on parameter C6-02, Carrier Frequency Selection.

## B. 4 d: References

Reference parameters set the various frequency reference values during operation.
d1: Frequency Reference

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { d1-01 } \\ & (280) \\ & ه \text { RUN } \end{aligned}$ | Frequency Reference 1 | Sets the frequency reference for the drive. Setting units are determined by parameter ol-03. | $\begin{aligned} & \text { Default: } 0.00 \mathrm{~Hz} \\ & \text { Min.: } 0.00 \\ & \text { Max.: } 400.00<1> \\ & \text { <2> } \end{aligned}$ | 101 |
| d1-02 <br> (281) <br> © | Frequency Reference 2 | Sets the frequency reference for the drive. $<1>$ Range upper limit is determined by parameters d2-01, Frequency Reference Upper Limit, and E1-04, Maximum Output Frequency.
$<2>$ The setting range is 0.0 to 66.0 in AOLV/PM.
d2: Frequency Upper/Lower Limits

| No. <br> (Addr. <br> Hex.) | Name | Description | Setting | Page |
| :---: | :--- | :--- | :--- | :---: |
| d2-01 <br> (289) | Frequency Reference Upper <br> Limit | Sets the frequency reference upper limit as a percentage of the maximum <br> output frequency. | Default: $100.0 \%$ <br> Min.: 0.0 <br> Max.: 110.0 | - |
| d2-02 <br> $(28 A)$ | Frequency Reference Lower <br> Limit | Sets the frequency reference lower limit as a percentage of the maximum <br> output frequency. | Default: $0.0 \%$ <br> Min.: 0.0 <br> Max.: 110.0 | - |
| d2-03 <br> $(293)$ | Master Speed Reference <br> Lower Limit | Sets the lower limit for frequency references from analog inputs as a <br> percentage of the maximum output frequency. | Default: $0.0 \%$ <br> Min.: 0.0 <br> Max.: 110.0 | - |

d3: Jump Frequency

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { d3-01 } \\ & (294) \end{aligned}$ | Jump Frequency 1 | Eliminates problems with resonant vibration of the motor/machine by avoiding continuous operation in predefined frequency ranges. The drive accelerates and decelerates the motor through the prohibited frequency ranges. Setting 0.0 disables this function. Parameters must be set so that d3-01 $\geq \mathrm{d} 3-02 \geq \mathrm{d} 3-03$. | Default: 0.0 Hz <br> Min.: 0.0 <br> Max.: 400.0 | - |
| $\begin{aligned} & \text { d3-02 } \\ & (295) \end{aligned}$ | Jump Frequency 2 | Eliminates problems with resonant vibration of the motor/machine by avoiding continuous operation in predefined frequency ranges. The drive accelerates and decelerates the motor through the prohibited frequency ranges. Setting 0.0 disables this function. <br> Parameters must be set so that d3-01 $\geq \mathrm{d} 3-02 \geq \mathrm{d} 3-03$. | Default: 0.0 Hz <br> Min.: 0.0 <br> Max.: 400.0 | - |
| $\begin{aligned} & \text { d3-03 } \\ & (296) \end{aligned}$ | Jump Frequency 3 | Eliminates problems with resonant vibration of the motor/machine by avoiding continuous operation in predefined frequency ranges. The drive accelerates and decelerates the motor through the prohibited frequency ranges. Setting 0.0 disables this function. Parameters must be set so that d3-01 $\geq \mathrm{d} 3-02 \geq \mathrm{d} 3-03$. | Default: 0.0 Hz <br> Min.: 0.0 <br> Max.: 400.0 | - |
| $\begin{aligned} & \text { d3-04 } \\ & (297) \end{aligned}$ | Jump Frequency Width | Sets the dead-band width around each selected prohibited frequency reference point. | Default: <1> <br> Min.: 0.0 <br> Max.: 20.0 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Mode Setting.

## d4: Frequency Reference Hold and Up/Down 2 Function

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { d4-01 } \\ & (298) \end{aligned}$ | Frequency Reference Hold Function Selection | 0: Disabled. Drive starts from zero when the power is switched on. <br> 1: Enabled. At power up, the drive starts the motor at the Hold frequency that was saved. | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { d4-03 } \\ & (2 \mathrm{AA}) \end{aligned}$ | Frequency Reference Bias Step (Up/Down 2) | Sets the bias added to the frequency reference when the Up 2 and Down 2 digital inputs are enabled (H1- $-\square=75,76$ ). | $\begin{aligned} & \text { Default: } 0.00 \mathrm{~Hz} \\ & \text { Min.: } 0.00 \\ & \text { Max.: } 99.99 \end{aligned}$ | - |
| $\begin{aligned} & \mathrm{d} 4-04 \\ & (2 \mathrm{AB}) \\ & \hline \text { RUN } \end{aligned}$ | Frequency Reference Bias Accel/Decel (Up/Down 2) | 0: Use selected accel/decel time. <br> 1: Use accel/decel time 4 (C1-07 and C1-08). | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \mathrm{d} 4-05 \\ & (2 \mathrm{AC}) \\ & \stackrel{\rightharpoonup}{\Delta R U N} \end{aligned}$ | Frequency Reference Bias Operation Mode Selection (Up/Down 2) | 0 : Bias value is held if no input Up 2 or Down 2 is active. 1: When the Up 2 reference and Down 2 reference are both on or both off, the applied bias becomes 0 . The specified accel/decel times are used for acceleration or deceleration. | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \mathrm{d} 4-06 \\ & (2 \mathrm{AD}) \end{aligned}$ | Frequency Reference Bias (Up/Down 2) | The Up/Down 2 bias value is saved in d4-06 when the frequency reference is not input by the digital operator. Set as a percentage of the maximum output frequency. | $\begin{array}{\|l} \hline \text { Default: } 0.0 \% \\ \text { Min.: -99.9 } \\ \text { Max.: } 100.0 \\ \hline \end{array}$ | - |
| $\begin{aligned} & \text { d4-07 } \\ & (2 \mathrm{AE}) \end{aligned}$ | Analog Frequency Reference Fluctuation Limit (Up/Down 2) | Limits how much the frequency reference is allowed to change while an input terminal set for Up 2 or Down 2 is enabled. If the frequency reference changes for more than the set value, then the bias value is held and the drive accelerates or decelerates to the frequency reference. Set as a percentage of the maximum output frequency. | $\begin{aligned} & \text { Default: } 1.0 \% \\ & \text { Min.: } 0.1 \\ & \text { Max.: } 100.0 \end{aligned}$ | - |
| $\begin{aligned} & \hline \text { d4-08 } \\ & (2 \mathrm{AF}) \\ & \hline \text { DRUN } \end{aligned}$ | Frequency Reference Bias Upper Limit (Up/Down 2) | Sets the upper limit for the bias and the value that can be saved in d4-06. Set as a percentage of the maximum output frequency. | $\begin{aligned} & \text { Default: } 0.0 \% \\ & \text { Min.: 0.0 } \\ & \text { Max.: } 100.0 \end{aligned}$ | - |
| $\begin{aligned} & \hline \text { d4-09 } \\ & (2 \mathrm{~B} 0) \\ & \hline \text { RuN } \end{aligned}$ | Frequency Reference Bias Lower Limit (Up/Down 2) | Sets the lower limit for the bias and the value that can be saved in d4-06. Set as a percentage of the maximum output frequency. | Default: 0.0\% <br> Min.: -99.9 <br> Max.: 0.0 | - |
| $\begin{aligned} & \hline \text { d4-10 } \\ & \text { (2B6) } \end{aligned}$ | Up/Down Frequency Reference Limit Selection | 0 : The lower limit is determined by $\mathrm{d} 2-02$ or an analog input. 1: The lower limit is determined by d2-02. | Default: 0 <br> Range: 0,1 | - |

## - d5: Torque Control

| No. (Addr Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { d5-01 } \\ & (29 \mathrm{~A}) \end{aligned}$ | Torque Control Selection | 0: Speed Control <br> 1: Torque Control <br> Set to 0 when using a digital input to switch between Speed and Torque Control (H1-ロロ = 71). | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { d5-02 } \\ & \text { (29B) } \end{aligned}$ | Torque Reference Delay Time | Sets a delay time for the torque reference signal. Used to suppress effects by noisy or fluctuating torque reference signals. | Default: 0 ms <br> Min.: 0 <br> Max.: 1000 | - |
| $\begin{aligned} & \text { d5-03 } \\ & (29 \mathrm{C}) \\ & \hline \end{aligned}$ | Speed Limit Selection | 1: Limit set by the frequency reference in b1-01. 2: Limit set by d5-04. | Default: 1 <br> Range: 1, 2 | - |
| $\begin{aligned} & \text { d5-04 } \\ & \text { (29D) } \end{aligned}$ | Speed Limit | Sets the speed limit during Torque Control as a percentage of the maximum output frequency. Enabled when $\mathrm{d} 5-03=2$. A negative setting sets a limit in the opposite direction of the Run command. | Default: 0\% <br> Min.: - 120 <br> Max.: 120 | - |
| $\begin{aligned} & \mathrm{d} 5-05 \\ & (29 \mathrm{E}) \end{aligned}$ | Speed Limit Bias | Sets the speed limit bias as a percentage of the maximum output frequency. The bias is applied to the specified speed limit and can adjust the margin for the speed limit. | Default: 10\% <br> Min.: 0 <br> Max.: 120 | - |
| $\begin{aligned} & \mathrm{d} 5-06 \\ & (29 \mathrm{~F}) \end{aligned}$ | Speed/Torque Control Switchover Time | Sets the delay time for switching between Speed and Torque Control using an input terminal ( $\mathrm{H} 1-\square \square=71$ ). Reference values are held during this switch delay time. | Default: 0 ms <br> Min.: 0 <br> Max.: 1000 | - |
| $\begin{aligned} & \hline \text { d5-08 } \\ & \text { (2B5) } \end{aligned}$ | Unidirectional Speed Limit Bias | 0: Disabled <br> 1: Enabled | Default: 1 <br> Range: 0,1 | - |

## d6: Field Weakening and Field Forcing

| No. (Addr Hex.) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \mathrm{d} 6-01 \\ & (2 \mathrm{~A} 0) \end{aligned}$ | Field Weakening Level | Sets the drive output voltage for the Field Weakening function as a percentage of the maximum output voltage. <br> Enabled when a multi-function input is set for Field Weakening (H1-प्व = 63). | Default: 80\% <br> Min.: 0 <br> Max.: 100 | - |
| $\begin{aligned} & \mathrm{d} 6-02 \\ & (2 \mathrm{~A} 1) \end{aligned}$ | Field Weakening Frequency Limit | Sets the lower limit of the frequency range where Field Weakening control is valid. <br> The Field Weakening command is valid only at frequencies above this setting and only when the output frequency matches the frequency reference (speed agree). | Default: 0.0 Hz <br> Min.: 0.0 <br> Max.: 400.0 | - |
| $\begin{aligned} & \mathrm{d} 6-03 \\ & (2 \mathrm{~A} 2) \end{aligned}$ | Field Forcing Selection | 0: Disabled <br> 1: Enabled | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { d6-06 } \\ & (2 \mathrm{~A} 5) \end{aligned}$ | Field Forcing Limit | Sets the upper limit of the excitation current command during magnetic field forcing. A setting of $100 \%$ is equal to motor no-load current. Disabled only during DC Injection Braking. | Default: 400\% <br> Min.: 100 <br> Max.: 400 | - |

## d7: Offset Frequency

| No. (Addr. Hex) | Name | Description | Setting | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { d7-01 } \\ & (2 \mathrm{~B} 2) \\ & \hline \text { RUN } \end{aligned}$ | Offset Frequency 1 | Added to the frequency reference when the digital input "Frequency offset 1 " $(\mathrm{H} 1-\square \square=44)$ is switched on. | Default: 0.0\% <br> Min.: -100.0 <br> Max.: 100.0 | - |
|  | Offset Frequency 2 | Added to the frequency reference when the digital input "Frequency offset 2" (H1-पD = 45) is switched on. | $\begin{aligned} & \text { Default: } 0.0 \% \\ & \text { Min.: -100.0 } \\ & \text { Max.: } 100.0 \end{aligned}$ | - |
| $\begin{aligned} & \mathrm{d} 7-03 \\ & (2 \mathrm{~B} 4) \\ & \mathrm{B} \text { RuN } \end{aligned}$ | Offset Frequency 3 | Added to the frequency reference when the digital input "Frequency offset 3 " $(\mathrm{H} 1-\square \square=46)$ is switched on. | Default: $0.0 \%$ <br> Min.: -100.0 <br> Max.: 100.0 | - |

## B. 5 E: Motor Parameters

## E1: V/f Pattern for Motor 1

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { E1-01 } \\ (300) \end{gathered}$ | Input Voltage Setting | This parameter must be set to the power supply voltage. <br> WARNING! Electrical Shock Hazard. Drive input voltage (not motor voltage) must be set in E1-01 for the protective features of the drive to function properly. Failure to do so may result in equipment damage and/or death or personal injury. | $\begin{aligned} & \text { Default: } 230 \mathrm{~V}<1> \\ & \text { Min.: } 155 \\ & \text { Max.: } 255<1> \end{aligned}$ | 103 |
| $\begin{gathered} \text { E1-03 } \\ (302) \end{gathered}$ | V/f Pattern Selection | 0: 50 Hz , Constant torque 1 <br> 1: 60 Hz , Constant torque 2 <br> 2: 60 Hz , Constant torque $3(50 \mathrm{~Hz}$ base) <br> 3: 72 Hz , Constant torque $4(60 \mathrm{~Hz}$ base) <br> 4: 50 Hz , Variable torque 1 <br> 5: 50 Hz , Variable torque 2 <br> 6: 60 Hz , Variable torque 3 <br> 7: 60 Hz , Variable torque 4 <br> 8: 50 Hz , High starting torque 1 <br> 9: 50 Hz , High starting torque 2 <br> A: 60 Hz , High starting torque 3 <br> B: 60 Hz , High starting torque 4 <br> C: 90 Hz ( 60 Hz base) <br> D: 120 Hz ( 60 Hz base) <br> E: $180 \mathrm{~Hz}(60 \mathrm{~Hz}$ base) <br> F: Custom V/f, E1-04 through E1-13 settings define the V/f pattern | $\begin{aligned} & \text { Default: } \mathrm{F}^{<2>} \\ & \text { Range: } 0 \text { to } 9 \text {; } \\ & \text { A to } \mathrm{F}<3> \end{aligned}$ | 104 |
| $\begin{gathered} \text { E1-04 } \\ (303) \end{gathered}$ | Maximum Output Frequency | These parameters are only applicable when E1-03 is set to F. To set linear V/f characteristics, set the same values for E1-07 and E1-09. In this case, the setting for E1-08 will be disregarded. Ensure that the four frequencies are set according to these rules: $\text { E1-09 } \leq \text { E1-07 }<\text { E1-06 } \leq \text { E1-11 } \leq \text { E1-04 }$ <br> Output Voltage (V) <br> Note: Some parameters may not be available depending on the control mode. <br> - E1-07, E1-08, and E1-10 are available only in the following control modes: V/f Control, V/f with PG, Open Loop Vector. <br> - E1-11, E1-12, and E1-13 are available only in the following control modes: V/f Control, V/f with PG, Open Loop Vector, Closed Loop Vector. | Default: <4> <5> <br> Min.: 40.0 <br> Max.: $400.0^{<6>}$ | 107 |
| $\begin{gathered} \text { E1-05 } \\ (304) \end{gathered}$ | Maximum Voltage |  | Default: <4> < $5>$ <br> Min.: 0.0 V <br> Max.: $255.0 \mathrm{~V}^{<1>}$ | 107 |
| $\begin{gathered} \text { E1-06 } \\ (305) \end{gathered}$ | Base Frequency |  | $\begin{aligned} & \text { Default: <4><5> } \\ & \text { Min.: } 0.0 \\ & \text { Max.: E1-04<6> } \end{aligned}$ | 107 |
| $\begin{gathered} \text { E1-07 } \\ (306) \end{gathered}$ | Middle Output Frequency |  | $\begin{aligned} & \hline \text { Default: <4> } \\ & \text { Min.: 0.0 } \\ & \text { Max.: E1-04 } \\ & \hline \end{aligned}$ | 107 |
| $\begin{gathered} \text { E1-08 } \\ (307) \end{gathered}$ | Middle Output Frequency Voltage |  | Default: <4> <br> Min.: 0.0 V <br> Max.: 255.0 V <1> | 107 |
| $\begin{gathered} \text { E1-09 } \\ (308) \end{gathered}$ | Minimum Output Frequency |  | $\begin{aligned} & \hline \text { Default: <4> <5> } \\ & \text { Min.: } 0.0 \\ & \text { Ma.: E1-04 <6> } \\ & <7> \end{aligned}$ | 107 |
| $\begin{gathered} \text { E1-10 } \\ (309) \end{gathered}$ | Minimum Output Frequency Voltage |  | Default: <4> Min.: 0.0 V Max.: $255.0 \mathrm{~V}^{<1>}$ | 107 |
| $\begin{aligned} & \text { E1-11 } \\ & (30 \mathrm{~A}) \\ & <9> \end{aligned}$ | Middle Output Frequency 2 |  | $\begin{aligned} & \text { Default: } 0.0 \mathrm{~Hz} \\ & \text { Min.: } 0.0 \\ & \text { Max.: E1-04 <7> } \end{aligned}$ | 107 |
| $\begin{aligned} & \text { E1-12 } \\ & (30 \mathrm{~B}) \end{aligned}$ | Middle Output Frequency Voltage 2 |  | Default: 0.0 V <br> Min.: 0.0 <br> Max.: $255.0 \mathrm{~V}<1>$ | 107 |
| $\begin{aligned} & \text { E1-13 } \\ & (30 \mathrm{C}) \end{aligned}$ | Base Voltage |  | Default: $0.0 \mathrm{~V}{ }^{<8>}$ Min.: 0.0 <br> Max.: $255.0 \mathrm{~V}^{<1>}$ | 107 |

$<1>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
$<2>$ Parameter setting value is not reset to the default value when the drive is initialized.
$<3>$ The setting value is F in OLV modes.

## B. 5 E: Motor Parameters

$<4>$ Default setting is dependent on parameters A1-02, Control Model Selection, C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
$<5>$ Default setting is dependent on parameter E5-01, Motor Code Selection.
$<6>$ In OLV/PM, setting range varies according to the motor code entered to E5-01. The setting range is 0.0 to 400.0 Hz when E5-01 is set to FFFF.
$<7>$ The setting range is 0.0 to 66.0 in AOLV/PM.
$<8>$ When Auto-Tuning is performed, E1-13 and E1-05 will be set to the same value.
<9> Parameter ignored when E1-11 (Motor 1 Mid Output Frequency 2) and E1-12 (Motor 1 Mid Output Frequency Voltage 2) are set to 0.0.

## E2: Motor 1 Parameters

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { E2-01 } \\ & \text { (30E) } \end{aligned}$ | Motor Rated Current | Sets the motor nameplate full load current in amps. Automatically set during Auto-Tuning. | Default: <1> <br> Min.: $10 \%$ of drive rated current Max.: $200 \%$ of drive rated current <2> | 108 |
| $\begin{aligned} & \text { E2-02 } \\ & (30 \mathrm{~F}) \end{aligned}$ | Motor Rated Slip | Sets the motor rated slip. Automatically set during Auto-Tuning. | Default: <1> <br> Min.: 0.00 Hz <br> Max.: 20.00 Hz | - |
| $\begin{gathered} \text { E2-03 } \\ (310) \end{gathered}$ | Motor No-Load Current | Sets the no-load current for the motor. Automatically set during Auto-Tuning. | $\begin{aligned} & \text { Default: <1> } \\ & \text { Min.: 0 A } \\ & \text { Max.: E2-01 <2> } \end{aligned}$ | - |
| $\begin{gathered} \text { E2-04 } \\ (311) \end{gathered}$ | Number of Motor Poles | Sets the number of motor poles. Automatically set during Auto-Tuning. | Default: 4 <br> Min.: 2 <br> Max.: 48 | - |
| $\begin{gathered} \text { E2-05 } \\ (312) \end{gathered}$ | Motor Line-to-Line Resistance | Sets the phase-to-phase motor resistance. Automatically set during Auto-Tuning. <br> Note: The units are expressed in $\mathrm{m} \Omega$ in models CIMR-AD4A0930 and 4A1200. | Default: <1> <br> Min.: $0.000 \Omega$ <br> Max.: $65.000 \Omega$ | - |
| $\begin{gathered} \text { E2-06 } \\ (313) \end{gathered}$ | Motor Leakage Inductance | Sets the voltage drop due to motor leakage inductance as a percentage of motor rated voltage. Automatically set during Auto-Tuning. | Default: <1> <br> Min.: 0.0\% <br> Max.: 40.0\% | - |
| $\begin{gathered} \text { E2-07 } \\ (314) \end{gathered}$ | Motor Iron-Core Saturation Coefficient 1 | Sets the motor iron saturation coefficient at $50 \%$ of magnetic flux. Automatically set during Auto-Tuning. | $\begin{aligned} & \text { Default: } 0.50 \\ & \text { Min.: E2-07 } \\ & \text { Max.: } 0.50 \end{aligned}$ | - |
| $\begin{gathered} \text { E2-08 } \\ (315) \end{gathered}$ | Motor Iron-Core Saturation Coefficient 2 | Sets the motor iron saturation coefficient at $75 \%$ of magnetic flux. Automatically set during Auto-Tuning. | Default: 0.75 <br> Min.: E2-07 <br> Max.: 0.75 | - |
| $\begin{gathered} \text { E2-09 } \\ (316) \end{gathered}$ | Motor Mechanical Loss | Sets the motor mechanical loss as a percentage of motor rated power (kW). | $\begin{array}{\|l} \text { Default: } 0.0 \% \\ \text { Min.: } 0.0 \\ \text { Max.: } 10.0 \\ \hline \end{array}$ | - |
| $\begin{gathered} \text { E2-10 } \\ (317) \end{gathered}$ | Motor Iron Loss for Torque Compensation | Sets the motor iron loss. | Default: <1> <br> Min.: 0 W <br> Max.: 65535 W | - |
| $\begin{gathered} \text { E2-11 } \\ (318) \end{gathered}$ | Motor Rated Power | Sets the motor rated power in kilowatts $(1 \mathrm{HP}=0.746 \mathrm{~kW})$. Automatically set during Auto-Tuning. | Default: <1> <br> Min.: 0.00 kW <br> Max.: 650.00 kW | - |

$<1>$ Default setting is dependent on parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
$<2>$ The number of decimal places in the parameter value depends on the drive model and the ND/HD selection in parameter C6-01. This value has two decimal places $(0.01 \mathrm{~A})$ if the drive is set for a maximum applicable motor capacity up to and including 11 kW , and one decimal place ( 0.1 A ) if the maximum applicable motor capacity is higher than 11 kW .

## E3: V/f Pattern for Motor 2

These parameters are hidden when a PM motor control mode has been selected for motor $1(\mathrm{~A} 1-02=5,6,7)$.

| No. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { E3-01 } \\ & (319) \end{aligned}$ | Motor 2 Control Mode Selection | ```0: V/f Control : V/f Control with PG 2: Open Loop Vector Control 3: Closed Loop Vector Control``` | Default: 0 <br> Range: 0 to 3 | - |
| $\begin{aligned} & \text { E3-04 } \\ & (31 \mathrm{~A}) \end{aligned}$ | Motor 2 Maximum Output Frequency | These parameters are only applicable when E1-03 is set to F. <br> To set linear V/f characteristics, set the same values for E3-07 and E3-09. In this case, the setting for E3-08 will be disregarded. Ensure that the four frequencies are set according to these rules or an oPE10 fault will occur: E3-09 $\leq$ E3-07 < E3-06 $\leq$ E3-11 $\leq$ E3-04 <br> Output Voltage (V) <br> Note: E3-07 and E3-08 are only available in the following control modes: V/f, V/f w/PG and OLV. | Default: <1> <br> Min.: 40.0 <br> Max.: 400.0 | - |
| $\begin{aligned} & \text { E3-05 } \\ & \text { (31B) } \end{aligned}$ | Motor 2 Maximum Voltage |  | Default: <1> <br> Min.: 0.0 V <br> Max.: $255.0 \mathrm{~V}^{<2>}$ | - |
| $\begin{aligned} & \text { E3-06 } \\ & \text { (31C) } \end{aligned}$ | Motor 2 Base Frequency |  | $\begin{aligned} & \text { Default:<1> } \\ & \text { Min.: } 0.0 \\ & \text { Max.: E3-04 } \end{aligned}$ | - |
| $\begin{aligned} & \text { E3-07 } \\ & \text { (31D) } \end{aligned}$ | Motor 2 Mid Output Frequency |  | Default: <1> Min: 0.0 Max: E3-04 | - |
| $\begin{aligned} & \text { E3-08 } \\ & \text { (31E) } \end{aligned}$ | Motor 2 Mid Output Frequency Voltage |  | Default: <1> <br> Min: 0.0 V <br> Max: $255.0 \mathrm{~V}^{<2>}$ | - |
| $\begin{aligned} & \text { E3-09 } \\ & (31 \mathrm{~F}) \end{aligned}$ | Motor 2 Minimum Output Frequency |  | $\begin{array}{\|l} \hline \text { Default: <1> } \\ \text { Min.: 0.0 } \\ \text { Max.: E3-04 } \end{array}$ | - |
| $\begin{gathered} \text { E3-10 } \\ (320) \end{gathered}$ | Motor 2 Minimum Output Frequency Voltage |  | Default: <1> <br> Min: 0.0 V <br> Max: $255.0 \mathrm{~V}^{<2>}$ | - |
| $\begin{gathered} \hline \text { E3-11 } \\ (345) \\ <3> \end{gathered}$ | Motor 2 Mid Output Frequency 2 |  | $\begin{array}{\|l\|} \hline \text { Default: } 0.0 \\ \text { Min.: } 0.0 \\ \text { Max.: E3- } 04<4> \\ \hline \end{array}$ | - |
| $\begin{gathered} \text { E3-12 } \\ (346) \end{gathered}$ | Motor 2 Mid Output Frequency Voltage 2 |  | $\begin{aligned} & \text { Default: } 0.0 \mathrm{~V} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 255.0^{<2>} \end{aligned}$ | - |
| $\begin{gathered} \text { E3-13 } \\ (347) \end{gathered}$ | Motor 2 Base Voltage |  | Default: $0.0 \mathrm{~V}^{<5>}$ <br> Min.: 0.0 <br> Max.: $255.0^{<2>}$ | - |

$<1>$ Default setting is dependent on E3-01, Motor 2 Control Mode Selection. The value shown here is for V/f Control (0).
$<2>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
$<3>$ Ignored when E3-11, Motor 2 Mid Output Frequency 2, and E3-12, Motor 2 Mid Output Frequency Voltage 2, are set to 0.
$<4>$ The setting range is 0.0 to 66.0 in AOLV/PM.
$<5>$ When Auto-Tuning is performed, E1-13 and E1-05 will be set to the same value.

## B. 5 E: Motor Parameters

## E4: Motor 2 Parameters

These parameters are hidden when a PM motor control mode has been selected for motor 1 ( $\mathrm{A} 1-02=5,6,7$ ).

| No. (Addr. Hex) Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { E4-01 } \\ (321) \end{gathered}$ | Motor 2 Rated Current | Sets the full load current for motor 2. Automatically set during Auto-Tuning. | Default: <1> <br> Min.: $10 \%$ of drive rated current Max.: 200\% of drive rated current <2> | - |
| $\begin{gathered} \text { E4-02 } \\ (322) \end{gathered}$ | Motor 2 Rated Slip | Sets the rated slip for motor 2. Automatically set during Auto-Tuning. | Default: <1> <br> Min.: 0.00 Hz <br> Max.: $20.00 \mathrm{~Hz}^{<2>}$ | - |
| $\begin{gathered} \text { E4-03 } \\ (323) \end{gathered}$ | Motor 2 Rated No-Load Current | Sets the no-load current for motor 2. Automatically set during Auto-Tuning. | Default: <1> <br> Min.: 0 A <br> Max.: E4-01 <2> | - |

$<1>$ Default setting is dependent on parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
$<2>$ The number of decimal places in the parameter value depends on the drive model and the ND/HD selection in parameter C6-01. This value has two decimal places $(0.01 \mathrm{~A})$ if the drive is set for a maximum applicable motor capacity up to and including 11 kW , and one decimal place $(0.1 \mathrm{~A})$ if the maximum applicable motor capacity is higher than 11 kW .

## E5: PM Motor Settings

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { E5-01 } \\ & (329) \end{aligned}$ | Motor Code Selection | Enter the Yaskawa motor code for the PM motor being used. Various motor parameters are automatically set based on the value of this parameter. Settings that were changed manually will be overwritten by the defaults of the selected motor code. <br> Note: Set to FFFF when using a non-Yaskawa PM motor. | $\begin{array}{\|l} \text { Default: <5> <6> } \\ \text { Min.: } 0000 \\ \text { Max.: FFFF } \end{array}$ | - |
| $\begin{aligned} & \text { E5-02 } \\ & (32 \mathrm{~A}) \\ & <2> \end{aligned}$ | Motor Rated Power | Sets the rated capacity of the motor. | Default: <3> Min.: 0.10 kW Max.: 650.00 kW | - |
| $\begin{aligned} & \text { E5-03 } \\ & (32 \mathrm{C}) \end{aligned}$ | Motor Rated Current | Sets the motor rated current. | Default: <3> Min: $10 \%$ of drive rated current Max: $200 \%$ of drive rated current ${ }^{<4>}$ | - |
| $\begin{aligned} & \text { E5-04 } \\ & (32 C) \\ & <2> \end{aligned}$ | Number of Motor Poles | Sets the number of motor poles. | $\begin{aligned} & \text { Default: <3> } \\ & \text { Min.: } \\ & \text { Max.: } 48 \end{aligned}$ | - |
| $\begin{aligned} & \text { E5-05 } \\ & (32 \mathrm{D}) \\ & <2> \end{aligned}$ | Motor Stator Resistance | Set the resistance for each motor phase. | $\begin{array}{\|l\|} \hline \text { Default: }<3> \\ \text { Min.: } 0.000 \Omega \\ \text { Max.: } 65.000 \Omega \\ \hline \end{array}$ | - |
| $\begin{gathered} \text { E5-06 } \\ (32 \mathrm{E}) \\ <2> \end{gathered}$ | Motor d-Axis Inductance | Sets the d-Axis inductance for the PM motor. | Default: <3> Min.: 0.00 mH Max.: 300.00 mH | - |
| $\begin{gathered} \text { E5-07 } \\ (32 \mathrm{~F}) \\ <2> \end{gathered}$ | Motor q-Axis Inductance | Sets the q-Axis inductance for the PM motor. | Default: <3> Min.: 0.00 mH Max.: 600.00 mH | - |
| $\begin{aligned} & \text { E5-09 } \\ & (331) \\ & <2> \end{aligned}$ | Motor Induction Voltage Constant 1 | Sets the induced phase peak voltage in units of $0.1 \mathrm{mV} /(\mathrm{rad} / \mathrm{s})$ [electrical angle]. Set this parameter when using a Yaskawa SSR1-Series PM motor with derated torque, or a Yaskawa SST4-Series motor with constant torque. Set E5-24 to 0 when setting this parameter. | Default: $<3>$ Min.: $0.0 \mathrm{mV} /$ (rad/s) Max.: $2000.0 \mathrm{mV} /$ (rad/s) | - |
| $\underset{(333)}{\text { E5-11 }}$ | Encoder Z Pulse Offset | Sets the offset between the rotor magnetic axis and the $Z$ Pulse of an incremental encoder during Z Pulse offset tuning. | $\begin{aligned} & \text { Default: } 0.0 \text { deg } \\ & \text { Min.: -180 } \\ & \text { Max.: } 180 \end{aligned}$ | - |
| $\begin{gathered} \text { E5-24 } \\ (353) \end{gathered}$ | Motor Induction Voltage Constant 2 | Sets the induced phase-to-phase rms voltage in units of $0.1 \mathrm{mV} /(\mathrm{r} / \mathrm{min})$ [mechanical angle]. Set this parameter when using a Yaskawa SMRA-Series SPM motor. | Default: <3> <br> Min.: $0.0 \mathrm{mV} /$ <br> ( $\mathrm{r} / \mathrm{min}$ ) <br> Max.: $6500.0 \mathrm{mV} /$ <br> (r/min) | - |

$<1>$ Selections may vary depending on the motor code entered to E5-01.
$<2>$ Setting value is not reset to the default when drive is initialized.
$<3>$ Default setting is dependent on parameter E5-01, Motor Code Selection.
$<4>$ The number of decimal places in the parameter value depends on the drive model and the ND/HD selection in parameter C6-01. This value has two decimal places $(0.01 \mathrm{~A})$ if the drive is set for a maximum applicable motor capacity up to and including 11 kW , and one decimal place ( 0.1 A ) if the maximum applicable motor capacity is higher than 11 kW .
<5> Default setting is dependent on parameters A1-02, Control Method Selection, o2-04, Drive Model Selection, and C6-01, Drive Duty Selection.
<6> When using a Yaskawa SMRA Series SPM Motor, the default setting is $1800 \mathrm{r} / \mathrm{min}$..

## B. 6 F: Options

F parameters program the drive for PG feedback from the motor and to function with option cards.

- F1: PG Speed Control Card (PG-X3/PG-B3)

Parameters F1-01, F1-05, F1-06, F1-12, F1-13, and F1-18 through F1-21 include "PG 1" in the parameter name and are used to set up a PG option card plugged into option port CN5-C of the drive.

Parameters F1-21 through F1-37 include "PG 2" in the parameter name and are used to set up a PG option card plugged into option port CN5-B of the drive.
Other parameters in the F1 group are used to set operation for PG options plugged into port CN5-C and CN5-B.

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { F1-01 } \\ & (380) \end{aligned}$ | PG 1 Pulses Per Revolution | Sets the number of PG (pulse generator or encoder) pulses. Sets the number of pulses per motor revolution. <br> Note: Setting range is 0 to 15000 ppr when A1-02 $=7$ (CLV/PM control mode). | Default: 1024 ppr Min.: 1 <br> Max.: 60000 | - |

| $\begin{aligned} & \hline \text { F7-09 } \\ & \text { (3ED) } \end{aligned}$ | Gateway Address 1 | Sets the most significant octet of network Gateway address. | Default: 192 <br> Range: 0 to 255 | - |
| $\begin{aligned} & \text { F7-10 } \\ & \text { (3EE) } \end{aligned}$ | Gateway Address 2 | Sets the second most significant octet of network Gateway address. | Default: 168 <br> Range: 0 to 255 | - |
| $\begin{aligned} & \text { F7-11 } \\ & \text { (3EF) } \end{aligned}$ | Gateway Address 3 | Sets the third most significant octet of network Gateway address. | Default: 1 <br> Range: 0 to 255 | - |
| $\begin{aligned} & \hline \text { F7-12 } \\ & \text { (3E0) } \end{aligned}$ | Gateway Address 4 | Sets the fourth most significant octet of network Gateway address. | Default: 1 <br> Range: 0 to 255 | - |
| $\begin{aligned} & \text { F7-13 } \\ & \text { (3F1) } \end{aligned}$ | Address Mode at Startup | Select the option address setting method $\begin{aligned} & \text { 0: Static }<3> \\ & \text { 1: BOOTP } \\ & \text { 2: DHCP } \end{aligned}$ | Default: 2 <br> Range: 0 to 2 | - |

## B. 6 F: Options

| No (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { F7-14 } \\ & \text { (3F2) } \end{aligned}$ | Duplex Mode Selection | Selects duplex mode setting. <br> 0 : Half duplex forced <br> 1: Auto-negotiate duplex mode and communication speed <br> 2: Full duplex forced | Default: 1 <br> Range: 0 to 2 | - |
| $\begin{aligned} & \text { F7-15 } \\ & \text { (3F3) } \end{aligned}$ | Communication Speed Selection | Sets the communication speed 10: 10 Mbps 100: 100 Mbps | Default: 10 <br> Range: 10, 100 | - |
| $\begin{aligned} & \text { F7-16 } \\ & \text { (3F4) } \end{aligned}$ | Communication Loss <br> Timeout | Sets the timeout value for communication loss detection in tenths of a second. A value of 0 disables the connection timeout. Example: An entered value of 100 represents 10.0 seconds. | Default: 0 <br> Min.: 0 <br> Max.: 300 | - |
| $\begin{aligned} & \text { F7-17 } \\ & \text { (3F5) } \end{aligned}$ | EtherNet/IP Speed Scaling Factor | Sets the scaling factor for the speed monitor in EtherNet/IP Class ID 2AH Object. | Default: 0 <br> Min.: -15 <br> Max.: 15 | - |
| $\begin{aligned} & \text { F7-18 } \\ & \text { (3F6) } \end{aligned}$ | EtherNet/IP Current Scaling Factor | Sets the scaling factor for the output current monitor in EtherNet/IP Class ID 2AH Object. | Default: 0 <br> Min.: -15 <br> Max.: 15 | - |
| $\begin{aligned} & \text { F7-19 } \\ & \text { (3F7) } \end{aligned}$ | EtherNet/IP Torque Scaling Factor | Sets the scaling factor for the torque monitor in EtherNet/IP Class ID 2AH Object. | Default: 0 <br> Min.: -15 <br> Max.: 15 | - |
| $\begin{aligned} & \text { F7-20 } \\ & \text { (3F8) } \end{aligned}$ | EtherNet/IP Power Scaling Factor | Sets the scaling factor for the power monitor in EtherNet/IP Class ID 2AH Object. | Default: 0 <br> Min.: -15 <br> Max.: 15 | - |
| $\begin{aligned} & \text { F7-21 } \\ & \text { (3F9) } \end{aligned}$ | EtherNet/IP Voltage Scaling Factor | Sets the scaling factor for the voltage monitor in EtherNet/IP Class ID 2AH Object. | Default: 0 <br> Min.: -15 <br> Max.: 15 | - |
| $\begin{aligned} & \text { F7-22 } \\ & (3 \mathrm{FA}) \end{aligned}$ | EtherNet/IP Time Scaling | Sets the scaling factor for the time monitor in EtherNet/IP Class ID 2AH Object. | Default: 0 <br> Min.: -15 <br> Max.: 15 | - |
| $\begin{gathered} \text { F7-23 to } \\ \text { F7-32 } \\ (3 \mathrm{FB} \text { to } \\ 374) \end{gathered}$ | Dynamic Output Assembly Parameters | Parameters used in Output Assembly 116. Each parameter contains a MEMOBUS/Modbus address. The value received for Output Assembly 116 will be written to this corresponding MEMOBUS/Modbus address. A MEMOBUS/Modbus address value of 0 means that the value received for Output Assembly 116 will not be written to any MEMOBUS/Modbus register. | Default: 0 | - |
| $\begin{aligned} & \text { F7-33 to } \\ & \text { F7-42 } \\ & (375 \text { to } \\ & 37 \mathrm{E}) \end{aligned}$ | Dynamic Input Assembly Parameters | Parameters used in Input Assembly 166. Each parameter contains a MEMOBUS/Modbus address. The value sent for Input Assembly 166 will be read from this corresponding MEMOBUS/Modbus address. A MEMOBUS/ Modbus address value of 0 means that the value sent for Input Assembly 166 is not defined by the user, therefore the option default register value will be returned. | Default: 0 | - |

$<1>$ Parameter setting value is not reset to the default value when the drive is initialized.
$<2>$ Cycle power for setting changes to take effect.
$<3>$ If F7-13 is set to 0 , all IP addresses (F7-01 to F7-04) must be unique.

## B. 7 H Parameters: Multi-Function Terminals

H parameters assign functions to the multi-function input and output terminals.

## H1: Multi-Function Digital Inputs

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\underset{(438)}{\mathrm{H} 1-01}$ | Multi-Function Digital Input Terminal S1 Function Selection | Assigns a function to the multi-function digital inputs. Refer to pages 217 to 220 for descriptions of setting values. <br> Note: Set unused terminals to F. | Default: 40 (F) ${ }^{<1>}$ <br> Min.: 1 <br> Max.: 9F | 109 |
| $\begin{gathered} \mathrm{H} 1-02 \\ (439) \end{gathered}$ | Multi-Function Digital Input Terminal S2 Function Selection | Assigns a function to the multi-function digital inputs. Refer to pages 217 to 220 for descriptions of setting values. <br> Note: Set unused terminals to F. | Default: 41 (F) ${ }^{<1>}$ <br> Min.: 1 <br> Max.: 9F | 109 |
| $\begin{gathered} \mathrm{H} 1-03 \\ (400) \end{gathered}$ | Multi-Function Digital Input Terminal S3 Function Selection | Assigns a function to the multi-function digital inputs. Refer to pages 217 to 220 for descriptions of setting values. <br> Note: Set unused terminals to F. | Default: 24 <br> Min.: 0 <br> Max.: 9F | 109 |
| $\begin{gathered} \text { H1-04 } \\ (401) \end{gathered}$ | Multi-Function Digital Input Terminal S4 Function Selection | Assigns a function to the multi-function digital inputs. Refer to pages 217 to 220 for descriptions of setting values. <br> Note: Set unused terminals to F. | Default: 14 <br> Min.: 0 <br> Max.: 9F | 109 |
| $\begin{gathered} \mathrm{H} 1-05 \\ (402) \end{gathered}$ | Multi-Function Digital Input Terminal S5 Function Selection | Assigns a function to the multi-function digital inputs. Refer to pages 217 to 220 for descriptions of setting values. <br> Note: Set unused terminals to F. | Default: 3 (0) ${ }^{<1>}$ <br> Min.: 0 <br> Max.: 9F | 109 |
| $\begin{gathered} \text { H1-06 } \\ (403) \end{gathered}$ | Multi-Function Digital Input Terminal S6 Function Selection | Assigns a function to the multi-function digital inputs. Refer to pages 217 to 220 for descriptions of setting values. <br> Note: Set unused terminals to F. | Default: 4 (3) ${ }^{<1>}$ Min.: 0 <br> Max.: 9F | 109 |
| $\begin{gathered} \mathrm{H} 1-07 \\ (404) \end{gathered}$ | Multi-Function Digital Input Terminal S7 Function Selection | Assigns a function to the multi-function digital inputs. Refer to pages 217 to 220 for descriptions of setting values. <br> Note: Set unused terminals to F. | Default: 6 (4) ${ }^{<1>}$ <br> Min.: 0 <br> Max.: 9F | 109 |
| $\begin{gathered} \mathrm{H} 1-08 \\ (405) \end{gathered}$ | Multi-Function Digital Input Terminal S8 Function Selection | Assigns a function to the multi-function digital inputs. Refer to pages 217 to 220 for descriptions of setting values. <br> Note: Set unused terminals to F. | Default: 8 <br> Min.: 0 <br> Max.: 9F | 109 |

$<1>$ Value in parenthesis is the default setting when a 3 -Wire initialization is performed (A1-03 $=3330$ ).

| H1 Multi-Function Digital Input Selections |  |  |  |
| :---: | :--- | :--- | :--- | :--- |
| H1-Qロ <br> Setting | Function | Description | Page |
| 0 | 3-Wire sequence | Closed: Reverse rotation (only if the drive is set up for 3-Wire sequence) <br> Terminals S1 and S2 are automatically set up for the Run command and Stop command. | 110 |
| 1 | LOCAL/REMOTE selection | Open: REMOTE (parameter settings determine the source of the frequency Reference 1 or 2 <br> (b1-01, b1-02 or b1-15, b1-16) <br> Closed: LOCAL, digital operator is run and reference source | - |
| 2 | External reference 1/2 selection | Open: Run command and frequency reference source 1 (determined by b1-01 and b1-02) <br> Closed: Run command and frequency reference source 2 (determined by b1-15 and b1-16) | - |
| 3 | Multi-Step Speed Reference 1 | When input terminals are set to Multi-Step Speed References 1 through 3, switching <br> combinations of those terminals will create a multi-step speed sequence using the frequency <br> references set in d1-01 through d1-08. | - |
| 4 | Multi-Step Speed Reference 2 | When input terminals are set to Multi-Step Speed References 1 through 3, switching <br> combinations of those terminals will create a multi-step speed sequence using the frequency <br> references set in d1-01 through d1-08. | - |
| 5 | Multi-Step Speed Reference 3 | When input terminals are set to Multi-Step Speed References 1 through 3, switching <br> combinations of those terminals will create a multi-step speed sequence using the frequency <br> references set in d1-01 through d1-08. | - |
| 6 | Jog reference selection | Closed: Jog frequency reference (d1-17) selected. Jog has priority over all other reference <br> sources. | - |
| 7 | Accel/decel time selection 1 | Used to switch between accel/decel time 1 (set in C1-01, C1-02) and accel/decel time 2 (set <br> in C1-03, C1-04). | - |
| 8 | Baseblock command (N.O.) | Closed: No drive output | - |

## B. 7 H Parameters: Multi-Function Terminals

| H1 Multi-Function Digital Input Selections |  |  |  |
| :---: | :---: | :---: | :---: |
| H1- $\square$ ㅁ Setting | Function | Description | Page |
| 9 | Baseblock command (N.C.) | Open: No drive output | - |
| A | Accel/decel ramp hold | Open: Accel/decel is not held Closed: The drive pauses during acceleration or deceleration and maintains the output frequency. | - |
| B | Drive overheat alarm (oH2) | Closed: Closes when an oH2 alarm occurs | - |
| C | Analog terminal input selection | Open: Function assigned by H3-14 is disabled. Closed: Function assigned by H3-14 is enabled. | - |
| D | PG encoder disable | Open: Speed feedback for V/f Control with PG is enabled. Closed: Speed feedback disabled. | - |
| E | ASR integral reset | Open: PI control Closed: Integral reset | - |
| F | Through mode | Select this setting when using the terminal in a pass-through mode. The terminal does not trigger a drive function but can be used as digital input for the controller the drive is connected to. | - |
| 10 | Up command | The drive accelerates when the Up command terminal closes, and decelerates when the Down command closes. When both terminals are closed or both are open, the drive holds the frequency reference. The Up and Down commands must always be used in conjunction with one another. | - |
| 11 | Down command | The drive accelerates when the Up command terminal closes, and decelerates when the Down command closes. When both terminals are closed or both are open, the drive holds the frequency reference. The Up and Down commands must always be used in conjunction with one another. | - |
| 12 | Forward Jog | Closed: Runs forward at the Jog frequency d1-17. | - |
| 13 | Reverse Jog | Closed: Runs reverse at the Jog frequency d1-17. | - |
| 14 | Fault reset | Closed: Resets faults if the cause is cleared and the Run command is removed. | - |
| 15 | Fast Stop (N.O.) | Closed: Decelerates at the Fast Stop time set to C1-09. | - |
| 16 | Motor 2 selection | Open: Motor 1 (E1-पП, E2-पП) Closed: Motor 2 (E3-पᄆ, E4-पव) | - |
| 17 | Fast Stop (N.C.) | Open: Decelerates to stop at the Fast Stop time set to C1-09. | - |
| 18 | Timer function input | Triggers the timer set up by parameters b4-01 and b4-02. Must be set in conjunction with the timer function output ( $\mathrm{H} 2-\mathrm{\square D}=12$ ). | - |
| 19 | PID disable | Open: PID control enabled Closed: PID control disabled | - |
| 1A | Accel/decel time selection 2 | Used in conjunction with an input terminal set for "Accel/decel time selection 1" (H1- - $\quad=7$ ), and allows the drive to switch between accel/decel times 3 and 4 . | - |
| 1B | Program lockout | Open: Parameters cannot be edited (except for U1-01 if the reference source is assigned to the digital operator). <br> Closed: Parameters can be edited and saved. | - |
| 1E | Reference sample hold | Closed: Samples the analog frequency reference and operates the drive at that speed. | - |
| 20 to 2F | External fault | 20: N.O., Always detected, ramp to stop <br> 21: N.C., Always detected, ramp to stop <br> 22: N.O., During run, ramp to stop <br> 23: N.C., During run, ramp to stop <br> 24: N.O., Always detected, coast to stop <br> 25: N.C., Always detected, coast to stop <br> 26: N.O., During run, coast to stop <br> 27: N.C., During run, coast to stop <br> 28: N.O., Always detected, Fast Stop <br> 29: N.C., Always detected, Fast Stop <br> 2A: N.O., During run, Fast Stop <br> 2B: N.C., During run, Fast Stop <br> 2C: N.O., Always detected, alarm only (continue running) <br> 2D: N.C., Always detected, alarm only (continue running) <br> 2E: N.O., During run, alarm only (continue running) <br> 2F: N.C., During run, alarm only (continue running) | - |
| 30 | PID integral reset | Closed: Resets the PID control integral value. | - |
| 31 | PID integral hold | Open: Performs integral operation. <br> Closed: Maintains the current PID control integral value. | - |
| 32 | Multi-Step Speed Reference 4 | Used in combination with input terminals set to Multi-Step Speed Reference 1, 2, and 3. Use parameters d1-09 to d1-16 to set reference values. | - |

| H1 Multi-Function Digital Input Selections |  |  |  |
| :---: | :---: | :---: | :---: |
| $\begin{aligned} & \hline \text { H1-ロロ } \\ & \text { Setting } \\ & \hline \end{aligned}$ | Function | Description | Page |
| 34 | PID soft starter cancel | Open: PID soft starter is enabled. <br> Closed: Disables the PID soft starter b5-17. | - |
| 35 | PID input level selection | Closed: Inverts the PID input signal. | - |
| 40 | Forward run command (2-Wire sequence) | Open: Stop <br> Closed: Forward run <br> Note: Cannot be set together with settings 42 or 43 . | - |
| 41 | Reverse run command (2-Wire sequence) | Open: Stop <br> Closed: Reverse run <br> Note: Cannot be set together with settings 42 or 43 . | - |
| 42 | Run command <br> (2-Wire sequence 2 ) | Open: Stop <br> Closed: Run <br> Note: Cannot be set together with settings 40 or 41 . | - |
| 43 | FWD/REV command (2-Wire sequence 2) | Open: Forward <br> Closed: Reverse <br> Note: Determines motor direction, but does not issue a Run command. Cannot be set together with settings 40 or 41 . | - |
| 44 | Offset frequency 1 | Closed: Adds d7-01 to the frequency reference. | - |
| 45 | Offset frequency 2 | Closed: Adds d7-02 to the frequency reference. | - |
| 46 | Offset frequency 3 | Closed: Adds d7-03 to the frequency reference. | - |
| 47 | Node setup | Closed: Node setup for SI-S3 enabled. | - |
| 60 | DC Injection Braking command | Closed: Triggers DC Injection Braking. | - |
| 61 | External Speed Search command 1 | Closed: Activates Current Detection Speed Search from the maximum output frequency (E1-04). | - |
| 62 | External Speed Search command 2 | Closed: Activates Current Detection Speed Search from the frequency reference. | - |
| 63 | Field weakening | Closed: The drive performs Field Weakening control as set for d6-01 and d6-02. | - |
| 65 | KEB Ride-Thru 1 (N.C.) | Open: KEB Ride-Thru 1 enabled. | - |
| 66 | KEB Ride-Thru 1 (N.O.) | Closed: KEB Ride-Thru 1 enabled. | - |
| 67 | Communications test mode | Tests the MEMOBUS/Modbus RS-485/422 interface. Displays "PASS" if the test completes successfully. | - |
| 68 | High slip braking | Closed: Activates High Slip Braking to stop the drive during a Run command. | - |
| 6A | Drive enable | Open: Drive disabled. If this input is opened during run, the drive will stop as specified by bl-03. <br> Closed: Ready for operation. | - |
| 71 | Speed/Torque control Sswitch | Open: Speed Control Closed: Torque Control | - |
| 72 | Zero servo | Closed: Zero Servo enabled | - |
| 75 | Up 2 command | Used to control the bias added to the frequency reference by the Up/Down 2 function. The Up 2 and Down 2 commands must always be used in conjunction with one another. | - |
| 76 | Down 2 command | Used to control the bias added to the frequency reference by the Up/Down 2 function. The Up 2 and Down 2 commands must always be used in conjunction with one another. | - |
| 77 | ASR gain switch | Open: ASR proportional gain 1 (C5-01) Closed: ASR proportional gain 2 (C5-03) | - |
| 78 | External torque reference polarity inversion | Open: Forward torque reference. Closed: Reverse polarity. | - |
| 7A | KEB Ride-Thru 2 (N.C.) | Open: KEB Ride-Thru 2 enabled. Drive disregards L2-29 and performs Single Drive KEB Ride-Thru 2. | - |
| 7B | KEB Ride-Thru 2 (N.O.) | Closed: KEB Ride-Thru 2 enabled. Drive disregards L2-29 and performs Single Drive KEB Ride-Thru 2. | - |
| 7 C | Short circuit braking (N.O.) | Closed: Short Circuit Braking enabled | - |
| 7 D | Short circuit braking (N.C.) | Open: Short Circuit Braking enabled | - |
| 7 E | Forward/reverse detection (V/f Control with Simple PG feedback) | Direction of rotation detection (for V/f with Simple PG Feedback) | - |

| H1 Multi－Function Digital Input Selections |  |  |  |

## H2：Multi－Function Digital Outputs

| No． （Addr． Hex） | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \mathrm{H} 2-01 \\ & (40 \mathrm{~B}) \end{aligned}$ | Terminal M1－M2 function selection（relay） | Refer to H2 Multi－Function Digital Output Settings on pages 220 to 221 for descriptions of setting values． | Default： 0 Range： 0 to 192 | 110 |
| $\begin{gathered} \mathrm{H} 2-02 \\ (40 \mathrm{C}) \end{gathered}$ | Terminal M3－M4 function selection（relay） |  | Default： 1 <br> Range： 0 to 192 | 110 |
| $\begin{gathered} \hline \text { H2-03 } \\ \text { (40D) } \\ \hline \end{gathered}$ | Terminal M5－M6 function selection（relay） |  | Default： 2 <br> Range： 0 to 192 | 110 |
| $\begin{gathered} \mathrm{H} 2-06 \\ (437) \end{gathered}$ | Watt Hour Output Unit Selection | Outputs a 200 ms pulse signal when the watt－hour counter increases by the units selected． <br> 0： 0.1 kWh units <br> 1： 1 kWh units <br> 2： 10 kWh units <br> 3： 100 kWh units <br> 4： 1000 kWh units | Default： 0 <br> Range： 0 to 4 | － |

| H2 Multi－Function Digital Output Settings |  |  |  |
| :---: | :--- | :--- | :--- | :--- |
| H2－ロロ <br> Setting | Function | Description | Page |
| 0 | During run | Closed：A Run command is active or voltage is output． | - |
| 1 | Zero speed | Open：Output frequency is above the minimum output frequency set in E1－09． <br> Closed：Output frequency is below the minimum output frequency set in E1－09． | - |
| 2 | Speed agree 1 | Closed：Output frequency equals the speed reference（plus or minus the hysteresis set to L4－02）． | 111 |
| 3 | User－set speed agree 1 | Closed：Output frequency and speed reference equal L4－01（plus or minus the hysteresis set to <br> L4－02）． | 1111 |
| 4 | Frequency detection 1 | Closed：Output frequency is less than or equal to the value in L4－01 with hysteresis determined <br> by L4－02． | - |
| 5 | Frequency detection 2 | Closed：Output frequency is greater than or equal to the value in L4－01 with hysteresis determined <br> by L4－02． | - |
| 6 | Drive ready | Closed：Power up is complete and the drive is ready to accept a Run command． | - |
| 7 | DC bus undervoltage | Closed：DC bus voltage is below the Uv trip level set in L2－05． | - |
| 8 | During baseblock（N．O．） | Closed：Drive has entered the baseblock state（no output voltage）． | - |
| 9 | Frequency reference source | Open：External Reference 1 or 2 supplies the frequency reference（set in b1－01 or b1－15）． <br> Closed：Digital operator supplies the frequency reference． | - |
| A | Run command source | Open：External Reference 1 or 2 supplies the Run command（set in b1－02 or b1－16）． <br> Closed：Digital operator supplies the Run command． | - |
| B | Torque detection 1（N．O．） | Closed：An overtorque or undertorque situation has been detected． | - |
| C | Frequency reference loss | Closed：Analog frequency reference has been lost． | - |
| D | Braking resistor fault | Closed：Braking resistor or transistor is overheated or faulted out． |  |
| Note：This function is not available in models CIMR－Aロ4A0930 and 4A1200． |  |  |  |

| H2 Multi－Function Digital Output Settings |  |  |  |
| :---: | :---: | :---: | :---: |
| H2－ロロ | Function | Description | Page |
| 15 | Frequency detection 3 | Closed：When the drive output frequency is less than or equal to the value in L4－03 $\pm \mathrm{L} 4-04$ ． | － |
| 16 | Frequency detection 4 | Closed：When the output frequency is greater than or equal to the value in L4－03 $\pm \mathrm{L} 4-04$ ． | － |
| 17 | Torque detection 1 （N．C．） | Open：Overtorque or undertorque has been detected． |  |
| 18 | Torque detection 2 （N．O．） | Closed：Overtorque or undertorque has been detected． |  |
| 19 | Torque detection 2 （N．C．） | Open：Overtorque or undertorque has been detected． | － |
| 1A | During reverse | Closed：Drive is running in the reverse direction． | － |
| 1B | During baseblock（N．C．） | Open：Drive has entered the baseblock state（no output voltage）． | － |
| 1 C | Motor 2 selection | Closed：Motor 2 is selected by a digital input（H1－ロप＝16） | － |
| 1D | During regeneration | Closed：Motor is regenerating energy into the drive． | － |
| 1 E | Restart enabled | Closed：An automatic restart is performed | － |
| 1F | Motor overload alarm（oL1） | Closed：oL1 is at $90 \%$ of its trip point or greater．An oH3 situation also triggers this alarm． | － |
| 20 | Drive overheat pre－alarm（oH） | Closed：Heatsink temperature exceeds the parameter L8－02 value． | － |
| 22 | Mechanical weakening detection | Closed：Mechanical weakening detected． | － |
| 2F | Maintenance period | Closed：Cooling fan，electrolytic capacitors，IGBTs，or the soft charge bypass relay may require maintenance． | － |
| 30 | During torque limit | Closed：When the torque limit has been reached． | － |
| 31 | During speed limit | Closed：Speed limit has been reached． | － |
| 32 | During speed limit in Torque Control | Closed：Speed limit has been reached while using Torque Control． | － |
| 33 | Zero Servo complete | Closed：Zero Servo operation has finished． | － |
| 37 | During frequency output | Open：Either the drive has stopped or baseblock，DC Injection Braking，or Initial Excitation is being performed． <br> Closed：Drive is running the motor（not in a baseblock state and DC Injection is not being performed）． | － |
| 38 | Drive enabled | Closed：Multi－function input set for＂Drive enable＂is closed（H1－ロロ＝6A） | － |
| 39 | Watt hour pulse output | Output units are determined by H2－06．Outputs a pulse every 200 ms to indicate the kWh count． | － |
| 3C | LOCAL／REMOTE status | Open：REMOTE Closed：LOCAL | － |
| 3D | During speed search | Closed：Speed Search is being executed． | － |
| 3E | PID feedback low | Closed：PID feedback level is too low． | － |
| 3F | PID feedback high | Closed：The PID feedback level is too high． | － |
| 4A | During KEB Ride－Thru | Closed：KEB Ride－Thru is being performed． | － |
| 4B | During short circuit braking | Closed：Short Circuit Braking is active． | － |
| 4 C | During fast stop | Closed：A Fast Stop command has been entered from the operator or input terminals． | － |
| 4D | oH Pre－alarm time limit | Closed：oH pre－alarm time limit has passed． | － |
| 4E | Braking transistor fault（rr） | Closed：The built－in dynamic braking transistor failed． <br> Note：This function is not available in models CIMR－AD4A0930 and 4A1200． | － |
| 4F | Braking resistor overheat（ oH ） | Closed：The dynamic braking resistor has overheated． <br> Note：This function is not available in models CIMR－A $\square 4$ A0930 and 4A1200． | － |
| 60 | Internal cooling fan alarm | Closed：Internal cooling fan alarm | － |
| 61 | Rotor position detection complete | Closed：Drive has successfully detected the rotor position of the PM motor． | － |
| 90 to 92 | DriveWorksEZ digital outputs 1 to 3 | Reserved for DWEZ digital output functions． | － |
| 100 to 192 | Function 0 to 92 with inverse output | Inverts the output switching of the multi－function output functions． Set the last two digits of 10D to reverse the output signal of that specific function． | － |

## - H3: Multi-Function Analog Inputs

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { H3-01 } \\ (410) \\ \hline \end{gathered}$ | Terminal A1 Signal Level Selection | $\begin{aligned} & \hline 0: 0 \text { to } 10 \mathrm{~V} \\ & 1:-10 \text { to } 10 \mathrm{~V} \end{aligned}$ | Default: 0 <br> Range: 0,1 | 112 |
| $\begin{gathered} \text { H3-02 } \\ (434) \\ \hline \end{gathered}$ | Terminal A1 Function Selection | Sets the function of terminal A1. | Default: 0 <br> Range: 0 to 31 | 112 |
| $\begin{gathered} \text { H3-03 } \\ (411) \\ \hline \text { 『ruN } \end{gathered}$ | Terminal A1 Gain Setting | Sets the level of the input value selected in $\mathrm{H} 3-02$ when 10 V is input at terminal A1. | Default: 100.0\% <br> Min.: -999.9 <br> Max.: 999.9 | 112 |
| $\begin{gathered} \text { H3-04 } \\ (412) \\ \triangle \text { ®uN } \end{gathered}$ | Terminal A1 Bias Setting | Sets the level of the input value selected in $\mathrm{H} 3-02$ when 0 V is input at terminal A1. | Default: 0.0\% <br> Min.: -999.9 Max.: 999.9 | 112 |
| $\begin{gathered} \text { H3-05 } \\ (413) \end{gathered}$ | Terminal A3 Signal Level Selection | $\begin{aligned} & \hline 0: 0 \text { to } 10 \mathrm{~V} \\ & 1:-10 \text { to } 10 \mathrm{~V} \end{aligned}$ | Default: 0 <br> Range: 0,1 | 113 |
| $\begin{gathered} \text { H3-06 } \\ (414) \\ \hline \end{gathered}$ | Terminal A3 Function Selection | Sets the function of terminal A3. | Default: 2 <br> Range: 0 to 31 | 113 |
| $\begin{gathered} \text { H3-07 } \\ (415) \\ \Delta_{\text {RuN }} \end{gathered}$ | Terminal A3 Gain Setting | Sets the level of the input value selected in H3-06 when 10 V is input at terminal A3. | Default: 100.0\% <br> Min.: -999.9 <br> Max.: 999.9 | 113 |
| $\begin{gathered} \text { H3-08 } \\ (416) \\ \hline \Delta_{\text {вuN }} \end{gathered}$ | Terminal A3 Bias Setting | Sets the level of the input value selected in H3-06 when 0 V is input at terminal A3. | Default: 0.0\% <br> Min.: -999.9 <br> Max.: 999.9 | 113 |
| $\begin{gathered} \text { H3-09 } \\ (417) \end{gathered}$ | Terminal A2 Signal Level Selection | 0: 0 to 10 V 1: -10 to 10 V 2: 4 to 20 mA 3: 0 to 20 mA $\quad$ Note: Use DIP switch S1 to set input terminal A2 for a current or a voltage $\quad$ input signal. | Default: 2 <br> Range: 0 to 3 | 114 |
| $\begin{gathered} \text { H3-10 } \\ (418) \\ \hline \end{gathered}$ | Terminal A2 Function Selection | Sets the function of terminal A2. | Default: 0 <br> Range: 0 to 31 | 114 |
| $\begin{aligned} & \hline \text { H3-11 } \\ & (419) \\ & \hline \text { هrum } \end{aligned}$ | Terminal A2 Gain Setting | Sets the level of the input value selected in H3-10 when $10 \mathrm{~V}(20 \mathrm{~mA})$ is input at terminal A2. | Default: 100.0\% <br> Min.: -999.9 <br> Max.: 999.9 | 114 |
| $\begin{aligned} & \text { H3-12 } \\ & (41 \mathrm{~A}) \\ & \triangle_{\text {RuN }} \end{aligned}$ | Terminal A2 Bias Setting | Sets the level of the input value selected in H3-10 when $0 \mathrm{~V}(0$ or 4 mA$)$ is input at terminal A2. | Default: 0.0\% <br> Min.: -999.9 <br> Max.: 999.9 | 114 |
| $\begin{gathered} \text { H3-13 } \\ (41 \mathrm{~B}) \end{gathered}$ | Analog Input Filter Time Constant | Sets a primary delay filter time constant for terminals A1, A2, and A3. Used for noise filtering. | Default: 0.03 s <br> Min.: 0.00 <br> Max.: 2.00 | - |
| $\begin{aligned} & \mathrm{H} 3-14 \\ & (41 \mathrm{C}) \end{aligned}$ | Analog Input Terminal Enable Selection | Determines which analog input terminals will be enabled when a digital input programmed for "Analog input enable" (H1-पロ = C) is activated. <br> 1: Terminal A1 only <br> 2: Terminal A2 only <br> 3: Terminals A1 and A2 only <br> 4: Terminal A3 only <br> 5: Terminals A1 and A3 <br> 6: Terminals A2 and A3 <br> 7: All terminals enabled | Default: 7 <br> Range: 1 to 7 | - |
| $\begin{gathered} \text { H3-16 } \\ (2 \mathrm{~F} 0) \end{gathered}$ | Terminal A1 Offset | Adds an offset when the analog signal to terminal A 1 is at 0 V . | Default: 0 <br> Min.: -500 <br> Max.: 500 | - |
| $\begin{gathered} \text { H3-17 } \\ (2 \mathrm{~F} 1) \end{gathered}$ | Terminal A2 Offset | Adds an offset when the analog signal to terminal A 2 is at 0 V . | Default: 0 <br> Min.: -500 <br> Max.: 500 | - |
| $\begin{gathered} \mathrm{H} 3-18 \\ (2 \mathrm{~F} 2) \end{gathered}$ | Terminal A3 Offset | Adds an offset when the analog signal to terminal A3 is at 0 V . | Default: 0 <br> Min.: -500 <br> Max.: 500 | - |

## B． 7 H Parameters：Multi－Function Terminals

| H3 Multi－Function Analog Input Settings |  |  |  |
| :---: | :---: | :---: | :---: |
| H3－ロロ Setting | Function | Description | Page |
| 0 | Frequency bias | $10 \mathrm{~V}=\mathrm{E} 1-04$（maximum output frequency） | － |
| 1 | Frequency gain | 0 to 10 V signal allows a setting of 0 to $100 \%$ ．-10 to 0 V signal allows a setting of -100 to $0 \%$ ． | － |
| 2 | Auxiliary frequency reference 1 （used as a Multi－Step Speed 2） | $10 \mathrm{~V}=$ E1－04（maximum output frequency） | － |
| 3 | Auxiliary frequency reference 2 （3rd step analog） | $10 \mathrm{~V}=\mathrm{E} 1-04$（maximum output frequency） | － |
| 4 | Output voltage bias | $10 \mathrm{~V}=\mathrm{E} 1-05$（motor rated voltage） | － |
| 5 | Accel／decel time gain | $10 \mathrm{~V}=100 \%$ | － |
| 6 | DC Injection Braking current | $10 \mathrm{~V}=$ Drive rated current | － |
| 7 | Overtorque／undertorque detection level | $10 \mathrm{~V}=$ Drive rated current（V／f，V／f w PG） <br> $10 \mathrm{~V}=$ Motor rated torque（OLV，CLV，OLV／PM，AOLV／PM，CLV／PM） | － |
| 8 | Stall Prevention level during run | $10 \mathrm{~V}=$ Drive rated current | － |
| 9 | Output frequency lower limit level | $10 \mathrm{~V}=$ E1－04（maximum output frequency） | － |
| B | PID feedback | $10 \mathrm{~V}=100 \%$ | － |
| C | PID setpoint | $10 \mathrm{~V}=100 \%$ | － |
| D | Frequency bias | $10 \mathrm{~V}=\mathrm{E} 1-04$（maximum output frequency） | － |
| E | Motor temperature（PTC input） | $10 \mathrm{~V}=100 \%$ | － |
| F | Through mode | Set this value when using the terminal in the pass－through mode． | － |
| 10 | Forward torque limit | $10 \mathrm{~V}=$ Motor rated torque | － |
| 11 | Reverse torque limit | $10 \mathrm{~V}=$ Motor rated torque | － |
| 12 | Regenerative torque limit | $10 \mathrm{~V}=$ Motor rated torque | － |
| 13 | Torque reference／Torque limit | $10 \mathrm{~V}=$ Motor rated torque | － |
| 14 | Torque compensation | $10 \mathrm{~V}=$ Motor rated torque | － |
| 15 | General torque limit | $10 \mathrm{~V}=$ Motor rated torque | － |
| 16 | Differential PID feedback | $10 \mathrm{~V}=100 \%$ | － |
| 17 | Motor Thermistor（NTC） | $\begin{aligned} & 10 \mathrm{~V}=-9^{\circ} \mathrm{C} \\ & 0 \mathrm{~V}=234^{\circ} \mathrm{C} \end{aligned}$ <br> Note：This function is only available in models CIMR－AD4A0930 and 4A1200． | － |
| 1F | Through mode | Set this value when using the terminal in the pass－through mode． | － |
| 30 to 32 | DriveWorksEZ analog input 1 to 3 | Output is determined by the function selected using DWEZ． | － |

## －H4：Analog Outputs

| No． （Addr． Hex） | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { H4-01 } \\ & (41 \mathrm{D}) \end{aligned}$ | Multi－Function Analog Output Terminal FM Monitor Selection | Selects the data to be output through multi－function analog output terminal FM． <br> Set the desired monitor parameter to the digits available in UD－Dロ． For example，enter＂103＂for U1－03． | Default： 102 <br> Range： 000 to 999 | 114 |
| $\begin{aligned} & \mathrm{H} 4-02 \\ & (41 \mathrm{E}) \\ & \hline \triangle \text { RUN } \end{aligned}$ | Multi－Function Analog Output Terminal FM Gain | Sets the signal level at terminal FM that is equal to $100 \%$ of the selected monitor value． | Default：100．0\％ <br> Min．：－999．9 <br> Max．： 999.9 | 114 |
| $\begin{gathered} \text { H4-03 } \\ (41 \mathrm{~F}) \\ \hline \text { RuN } \end{gathered}$ | Multi－Function Analog Output Terminal FM Bias | Sets the signal level at terminal FM that is equal to $0 \%$ of the selected monitor value． | Default：0．0\％ <br> Min．：－999．9 <br> Max．： 999.9 | 114 |
| $\begin{gathered} \mathrm{H} 4-04 \\ (420) \end{gathered}$ | Multi－Function Analog Output Terminal AM Monitor Selection | Selects the data to be output through multi－function analog output terminal AM． <br> Set the desired monitor parameter to the digits available in UD－ロロ． For example，enter＂103＂for U1－03． | Default： 103 <br> Range： 000 to 999 | 114 |

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :---: | :--- | :--- | :--- | :---: |
| H4-05 <br> (421) | Multi-Function Analog <br> Output Terminal AM Gain | Sets the signal level at terminal AM that is equal to $100 \%$ of the selected <br> monitor value. | Default: $50.0 \%$ <br> Min.: -999.9 <br> Max.: 999.9 | 114 |
| H4-06 <br> (422) | Multi-Function Analog <br> Output Terminal AM Bias | Sets the signal level at terminal AM that is equal to $0 \%$ of the selected monitor <br> value. | Default: $0.0 \%$ <br> Min.: -999.9 <br> Max.: 999.9 | 114 |
| H4-07 <br> (423) | Multi-Function Analog <br> Output Terminal FM Signal <br> Level Selection | $0: 0$ to 10 V <br> $1:-10$ to 10 V <br> $2: 4$ to 20 mA | Default: 0 <br> Range: 0 to 2 | 115 |
| H4-08 <br> (424) | Multi-Function Analog <br> Output Terminal AM Signal <br> Level Selection | $0: 0$ to 10 V <br> $1:-10$ to 10 V <br> $2: 4$ to 20 mA | Default: 0 <br> Range: 0 to 2 | 115 |

H5: MEMOBUS/Modbus Serial Communication

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { H5-01 } \\ (425) \\ <1> \end{gathered}$ | Drive Node Address | Selects drive station node number (address) for MEMOBUS/Modbus terminals R+, R-, S+, S-. Cycle power for the setting to take effect. | Default: 1F (Hex) <br> Min.: 0 <br> Max.: FF | - |
| $\xrightarrow[(426)]{\mathrm{H} 5-02}$ | Communication Speed Selection | ```0: 1200 bps 1: 2400 bps 2: 4800 bps 3: 9600 bps 4: 19200 bps 5: 38400 bps 6: 57600 bps 7: 76800 bps 8: 115200 bps Cycle power for the setting to take effect.``` | Default: 3 <br> Range: 0 to 8 | - |
| $\begin{gathered} \text { H5-03 } \\ (427) \end{gathered}$ | Communication Parity Selection | 0: No parity <br> 1: Even parity <br> 2: Odd parity <br> Cycle power for the setting to take effect. | Default: 0 <br> Range: 0 to 2 | - |
| $\begin{gathered} \text { H5-04 } \\ (428) \end{gathered}$ | Stopping Method after Communication Error (CE) | 0: Ramp to stop <br> 1: Coast to stop <br> 2: Fast Stop <br> 3: Alarm only | Default: 0 <br> Range: 0 to 3 | - |
| $\begin{gathered} \mathrm{H} 5-05 \\ (429) \end{gathered}$ | Communication Fault Detection Selection | 0: Disabled <br> 1: Enabled. If communication is lost for more than two seconds, a CE fault will occur. | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \mathrm{H} 5-06 \\ (42 \mathrm{~A}) \end{gathered}$ | Drive Transmit Wait Time | Set the wait time between receiving and sending data. | Default: 5 ms Min.: 5 <br> Max.: 65 | - |
| $\begin{gathered} \text { H5-07 } \\ (42 \mathrm{~B}) \\ \hline \end{gathered}$ | RTS Control Selection | 0: Disabled. RTS is always on. <br> 1: Enabled. RTS turns on only when sending. | Default: 1 <br> Range: 0,1 | - |
| $\begin{gathered} \text { H5-09 } \\ (435) \end{gathered}$ | CE Detection Time | Sets the time required to detect a communications error. Adjustment may be needed when networking several drives. | Default: 2.0 s <br> Min.: 0.0 <br> Max.: 10.0 | - |
| $\begin{gathered} \mathrm{H} 5-10 \\ (436) \end{gathered}$ | Unit Selection for MEMOBUS/Modbus Register 0025H | 0: 0.1 V units 1: 1 V units | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { H5-11 } \\ (43 \mathrm{C}) \end{gathered}$ | Communications ENTER Function Selection | 0: Drive requires an Enter command before accepting any changes to parameter settings. <br> 1: Parameter changes are activated immediately without the Enter command (same as V7). | Default: 1 <br> Range: 0,1 | - |
| $\begin{gathered} \text { H5-12 } \\ \text { (43D) } \\ \hline \end{gathered}$ | Run Command Method Selection | 0: FWD/Stop, REV/Stop <br> 1: Run/Stop, FWD/REV | Default: 0 <br> Range: 0,1 | - |

$<1>$ If this parameter is set to 0 , the drive will be unable to respond to MEMOBUS/Modbus commands.

## H6: Pulse Train Input/Output

| No. (Addr Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \mathrm{H} 6-01 \\ (42 \mathrm{C}) \end{gathered}$ | Pulse Train Input Terminal RP Function Selection | 0: Frequency reference 1: PID feedback value 2: PID setpoint value 3: V/f Control with Simple PG feedback (possible only when using motor 1 in V/f Control) | Default: 0 <br> Range: 0 to 3 | - |
| $\begin{aligned} & \text { H6-02 } \\ & (42 \mathrm{D}) \\ & 0 \text { RuN } \end{aligned}$ | Pulse Train Input Scaling | Sets the terminal RP input signal frequency that is equal to $100 \%$ of the value selected in H6-01. | Default: 1440 Hz <br> Min.: 1000 <br> Max.: 32000 | - |
| $\begin{aligned} & \mathrm{H} 6-03 \\ & (42 \mathrm{E}) \\ & \hline \end{aligned}$ | Pulse Train Input Gain | Sets the level of the value selected in H6-01 when a frequency with the value set in H6-02 is input. | $\begin{aligned} & \text { Default: } 100.0 \% \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 1000.0 \end{aligned}$ | - |
| $\begin{aligned} & \mathrm{H} 6-04 \\ & (42 \mathrm{~F}) \\ & \hline \end{aligned}$ | Pulse Train Input Bias | Sets the level of the value selected in $\mathrm{H} 6-01$ when 0 Hz is input. | $\begin{aligned} & \text { Default: 0.0\% } \\ & \text { Min.: -100.0 } \\ & \text { Max.: } 100.0 \end{aligned}$ | - |
| $$ | Pulse Train Input Filter Time | Sets the pulse train input filter time constant. | Default: 0.10 s <br> Min.: 0.00 <br> Max.: 2.00 | - |
| $\begin{aligned} & \text { H6-06 } \\ & (431) \end{aligned}$ | Pulse Train Monitor Selection | Select the pulse train monitor output function (value of the $\square-\square \square$ part of UD-口ロ). <br> For example, enter "501" for U5-01. | Default: 102 <br> Range: 000 to 809 | - |
| $\begin{gathered} \mathrm{H} 6-07 \\ (432) \end{gathered}$ | Pulse Train Monitor Scaling | Sets the terminal MP output signal frequency when the monitor value is $100 \%$. To have the pulse train monitor output equal the output frequency, set H6-06 to 2 and H6-07 to 0 . | Default: 1440 Hz Min.: 0 Max.: 32000 | - |
| $\begin{gathered} \mathrm{H} 6-08 \\ (43 \mathrm{~F}) \end{gathered}$ | Pulse Train Input Minimum Frequency | Sets the minimum frequency for the pulse train input to be detected. Enabled when H6-01 $=0$, 1 , or 2 . | $\begin{aligned} & \text { Default: } 0.5 \mathrm{~Hz} \\ & \text { Min.: } 0.1 \\ & \text { Max.: } 1000.0 \\ & \hline \end{aligned}$ | - |

## B. 8 L: Protection Function

L parameters provide protection to the drive and motor, including control during momentary power loss, Stall Prevention, frequency detection, fault restarts, overtorque detection, torque limits, and other types of hardware protection.

## - L1: Motor Protection

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { L1-01 } \\ (480) \end{gathered}$ | Motor Overload Protection Selection | 0: Disabled <br> 1: General purpose motor (standard fan cooled) <br> 2: Drive dedicated motor with a speed range of $1: 10$ <br> 3: Vector motor with a speed range of $1: 100$ <br> 4: PM motor with variable torque <br> 5: PM motor with constant torque control <br> 6: General purpose motor ( 50 Hz ) <br> The drive may not be able to provide protection when using multiple motors, even if overload is enabled in L1-01. Set L1-01 to 0 and install separate thermal relays to each motor. | Default: <1> <br> Range: 0 to 6 | - |
| $\begin{gathered} \text { L1-02 } \\ (481) \end{gathered}$ | Motor Overload Protection Time | Sets the motor thermal overload protection (oL1) time. | Default: 1.0 min <br> Min.: 0.1 <br> Max.: 5.0 | - |
| $\begin{gathered} \text { L1-03 } \\ (482) \end{gathered}$ | Motor Overheat Alarm Operation Selection (PTC input) | Sets operation when the motor temperature analog input (H3-02, H3-06, or $\mathrm{H} 3-10=\mathrm{E}$ ) exceeds the oH3 alarm level. <br> 0 : Ramp to stop <br> 1: Coast to stop <br> 2: Fast Stop (decelerate to stop using the deceleration time in C1-09) <br> 3: Alarm only ("oH3" will flash) | Default: 3 <br> Range: 0 to 3 | - |
| $\begin{gathered} \text { L1-04 } \\ (483) \end{gathered}$ | Motor Overheat Fault Operation Selection (PTC input) | Sets stopping method when the motor temperature analog input (H3-02, $\mathrm{H} 3-06$, or $\mathrm{H} 3-10=\mathrm{E}$ ) exceeds the oH 4 fault level. <br> 0: Ramp to stop <br> 1: Coast to stop <br> 2: Fast Stop (decelerate to stop using the deceleration time in C1-09) | Default: 1 <br> Range: 0 to 2 | - |
| $\begin{gathered} \text { L1-05 } \\ (484) \end{gathered}$ | Motor Temperature Input Filter Time (PTC input) | Adjusts the filter for the motor temperature analog input (H3-02, H3-06, or H3-10 = E). | $\begin{aligned} & \text { Default: } 0.20 \mathrm{~s} \\ & \text { Min.: } 0.00 \\ & \text { Max.: } 10.00 \end{aligned}$ | - |
| $\begin{aligned} & \text { L1-13 } \\ & (46 \mathrm{D}) \end{aligned}$ | Continuous Electrothermal Operation Selection | 0: Disabled 1: Enabled | Default: 1 <br> Range: 0,1 | - |
| $\begin{gathered} \text { L1-15 } \\ (440) \end{gathered}$ | Motor 1 Thermistor Selection (NTC) | 0: Disabled <br> 1: Enabled <br> Note: This parameter is only available in models CIMR-AD4A0930 and 4A1200. | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { L1-16 } \\ (441) \end{gathered}$ | Motor 1 Overheat Temperature | Sets the temperature for motor 1 that triggers an overheat fault (oH5). <br> Note: This parameter is only available in models CIMR-AD4A0930 and 4A1200. | Default: $120^{\circ} \mathrm{C}$ <br> Min.: 50 <br> Max.: 200 | - |
| $\begin{gathered} \text { L1-17 } \\ (442) \end{gathered}$ | Motor 2 Thermistor Selection (NTC) | 0: Disabled <br> 1: Enabled <br> Note: This parameter is only available in models CIMR-AD4A0930 and 4A1200. | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { L1-18 } \\ (443) \end{gathered}$ | Motor 2 Overheat Temperature | Sets the temperature for motor 1 that triggers an overheat fault $(\mathrm{oH} 5)$. <br> Note: This parameter is only available in models CIMR-AD4A0930 and 4A1200. | Default: $120^{\circ} \mathrm{C}$ <br> Min.: 50 <br> Max.: 200 | - |
| $\begin{gathered} \text { L1-19 } \\ (444) \end{gathered}$ | Operation at Thermistor Disconnect (THo) (NTC) | Determines drive response when a thermistor disconnect fault (THo) occurs. <br> 0: Ramp to stop <br> 1: Coast to stop <br> 2: Fast Stop (decelerate to stop using the deceleration time set to C1-09) <br> 3: Alarm only ("THo" will flash) <br> Note: This parameter is only available in models CIMR-A $\square 4$ A0930 and 4A1200. | Default: 3 <br> Range: 0 to 3 | - |

| No. <br> (Addr. <br> Hex) | Name |  | Description | Values |
| :--- | :--- | :--- | :--- | :--- |
| L1-20 <br> (445) | Operation at Motor Overheat <br> (oH5) | Determines drive response when a motor overheat fault (oH5) occurs. <br> 0: Ramp to stop <br> 1: Coast to stop <br> 2: Fast Stop (decelerate to stop using the deceleration time set to C1-09) <br> 3: Alarm only ("oH5" will flash) <br> Note: This parameter is only available in models CIMR-AD4A0930 and | Default: 1 <br> Range: 0 to 3 | - |

$<1>$ Default setting is determined by parameter A1-02, Control Method Selection.

## - L2: Momentary Power Loss Ride-Thru

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { L2-01 } \\ & (485) \end{aligned}$ | Momentary Power Loss Operation Selection | 0 : Disabled. Drive trips on Uv1 fault when power is lost. <br> 1: Recover within the time set in L2-02. Uv1 will be detected if power loss is longer than L2-02. <br> 2: Recover as long as CPU has power. Uv1 is not detected. <br> 3: KEB deceleration for the time set to L2-02. <br> 4: KEB deceleration as long as CPU has power. <br> 5: KEB deceleration to stop. | Default: 0 <br> Range: 0 to 5 | - |
| $\begin{gathered} \text { L2-02 } \\ (486) \end{gathered}$ | Momentary Power Loss Ride-Thru Time | Sets the Power Loss Ride-Thru time. Enabled only when L2-01 $=1$ or 3. | $\begin{aligned} & \text { Default: <1> } \\ & \text { Min.: } 0.0 \mathrm{~s} \\ & \text { Max.: } 25.5 \mathrm{~s} \end{aligned}$ | - |
| $\begin{aligned} & \text { L2-03 } \\ & (487) \end{aligned}$ | Momentary Power Loss Minimum Baseblock Time | Sets the minimum wait time for residual motor voltage decay before the drive output reenergizes after performing Power Loss Ride-Thru. <br> Increasing the time set to L2-03 may help if overcurrent or overvoltage occur during Speed Search or during DC Injection Braking. | Default: <1> <br> Min.: 0.1 s <br> Max.: 5.0 s | - |
| $\begin{gathered} \text { L2-04 } \\ (488) \end{gathered}$ | Momentary Power Loss Voltage Recovery Ramp Time | Sets the time for the output voltage to return to the preset V/f pattern during Speed Search. | Default: <1> <br> Min.: 0.0 s <br> Max.: 5.0 s | - |
| $\begin{gathered} \text { L2-05 } \\ (489) \end{gathered}$ | Undervoltage Detection Level (Uv1) | Sets the DC bus undervoltage trip level. | $\begin{aligned} & \text { Default: } 190 \mathrm{Vdc} \\ & <2><3> \\ & \text { Min.: } 150 \mathrm{Vdc} \\ & \text { Max.: } 210 \mathrm{Vdc}<3> \end{aligned}$ | - |
| $\begin{aligned} & \text { L2-06 } \\ & (48 \mathrm{~A}) \end{aligned}$ | KEB Deceleration Time | Sets the time required to decelerate from the speed when KEB was activated to zero speed. | Default: 0.00 s <br> Min.: 0.00 <br> Max.: 6000.0<4> | - |
| $\begin{aligned} & \text { L2-07 } \\ & \text { (48B) } \end{aligned}$ | KEB Acceleration Time | Sets the time to accelerate to the frequency reference when momentary power loss is over. If set to 0.0 , the active acceleration time is used. | Default: 0.00 s <br> Min.: 0.00 <br> Max.: 6000.0<4> | - |
| $\begin{aligned} & \text { L2-08 } \\ & \text { (48C) } \end{aligned}$ | Frequency Gain at KEB Start | Sets the percentage of output frequency reduction at the beginning of deceleration when the KEB Ride-Thru function is started. <br> Reduction $=($ slip frequency before KEB $) \times$ L2-08 $\times 2$ | Default: 100\% <br> Min.: 0 <br> Max.: 300 | - |
| $\begin{aligned} & \mathrm{L} 2-10 \\ & \text { (48E) } \end{aligned}$ | KEB Detection Time (Minimum KEB Time) | Sets the time to perform KEB Ride-Thru. | Default: 50 ms <br> Min.: 0 <br> Max.: 2000 | - |
| $\begin{gathered} \mathrm{L} 2-11 \\ (461) \end{gathered}$ | DC Bus Voltage Setpoint during KEB | Sets the desired value of the DC bus voltage during KEB Ride-Thru. | Default: <2> [E1-01] $\times 1.22$ <br> Min.: 150 Vdc <br> Max.: 400 Vdc ${ }^{<5>}$ | - |
| $\begin{aligned} & \mathrm{L} 2-29 \\ & (475) \end{aligned}$ | KEB Method Selection | 0: Single Drive KEB Ride-Thru 1 <br> 1: Single Drive KEB Ride-Thru 2 <br> 2: System KEB Ride-Thru 1 <br> 3: System KEB Ride-Thru 2 | Default: 0 <br> Range: 0 to 3 | - |

$<1>$ Default setting is dependent on parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
$<2>$ Default setting is dependent on parameter E1-01, Input voltage Setting.
$<3>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
$<4>$ Setting range value is dependent on parameter C1-10, Accel/Decel Time Setting Units. When C1-10 $=0$ (units of 0.01 seconds), the setting range becomes 0.00 to 600.00 seconds.
$<5>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives, but set the value below 1040 Vdc (overvoltage protection level).

## - L3: Stall Prevention

| No. (Addr Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { L3-01 } \\ (48 \mathrm{~F}) \end{gathered}$ | Stall Prevention Selection during Acceleration | 0: Disabled. <br> 1: General purpose. Acceleration is paused as long as the current is above the L3-02 setting. <br> 2: Intelligent. Accelerate in the shortest possible time without exceeding the L3-02 level. <br> Note: Setting 2 is not available when using OLV/PM. | Default: 1 <br> Range: 0 to 2 | 116 |
| $\begin{gathered} \text { L3-02 } \\ (490) \end{gathered}$ | Stall Prevention Level during Acceleration | Used when L3-01 $=1$ or $2.100 \%$ is equal to the drive rated current. | Default: <1> <br> Min.: 0\% <br> Max.: $150 \%<1>$ | 117 |
| $\begin{gathered} \text { L3-03 } \\ (491) \end{gathered}$ | Stall Prevention Limit during Acceleration | Sets Stall Prevention lower limit during acceleration when operating in the constant power range. Set as a percentage of drive rated current. | $\begin{aligned} & \text { Default: } 50 \% \\ & \text { Min.: } 0 \\ & \text { Max.: } 100 \end{aligned}$ | 117 |
| $\begin{gathered} \text { L3-04 } \\ (492) \end{gathered}$ | Stall Prevention Selection during Deceleration | 0: Disabled. Deceleration at the active deceleration rate. An ov fault may occur. <br> 1: General purpose. Deceleration is paused when the DC bus voltage exceeds the Stall Prevention level. <br> 2: Intelligent. Decelerate as fast as possible while avoiding ov faults. <br> 3: Stall Prevention with braking resistor. Stall Prevention during deceleration is enabled in coordination with dynamic braking. <br> 4: Overexcitation Deceleration. Decelerates while increasing the motor flux. 5: Overexcitation Deceleration 2. Adjust the deceleration rate according to the DC bus voltage. <br> Note: Setting 3 is not available in models CIMR-A $\square 4$ A0930 and 4A1200. | Default: 1 <br> Range: 0 to $5^{<2>}$ | 118 |
| $\begin{gathered} \text { L3-05 } \\ (493) \end{gathered}$ | Stall Prevention Selection during Run | 0: Disabled. Drive runs at a set frequency. A heavy load may cause speed loss. 1: Decel time 1. Uses the deceleration time set to C1-02 while Stall Prevention is performed. <br> 2: Decel time 2. Uses the deceleration time set to C1-04 while Stall Prevention is performed. | Default: 1 <br> Range: 0 to 2 | 119 |
| $\begin{gathered} \text { L3-06 } \\ (494) \end{gathered}$ | Stall Prevention Level during Run | Enabled when L3-05 is set to 1 or $2.100 \%$ is equal to the drive rated current. | Default: <1> <br> Min.: 30\% <br> Max.: $150 \%<1>$ | 119 |
| $\begin{aligned} & \text { L3-11 } \\ & \text { (4C7) } \end{aligned}$ | Overvoltage Suppression Function Selection | Enables or disables the ov suppression function, which allows the drive to change the output frequency as the load changes to prevent an ov fault. <br> 0: Disabled <br> 1: Enabled | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { L3-17 } \\ (462) \end{gathered}$ | Target DC Bus Voltage for Overvoltage Suppression and Stall Prevention | Sets the desired value for the DC bus voltage during overvoltage suppression and Stall Prevention during deceleration. | $\begin{aligned} & \text { Default: } 370 \mathrm{Vdc} \\ & <3><8> \\ & \text { Min.: } 150 \\ & \text { Max.: } 400<8> \\ & \hline \end{aligned}$ | - |
| $\begin{gathered} \text { L3-20 } \\ (465) \end{gathered}$ | DC Bus Voltage Adjustment Gain | Sets the proportional gain for KEB Ride-Thru, Stall Prevention, and overvoltage suppression. | Default: <4> <br> Min.: 0.00 <br> Max.: 5.00 | - |
| $\begin{aligned} & \text { L3-21 } \\ & (466) \end{aligned}$ | Accel/Decel Rate Calculation Gain | Sets the proportional gain used to calculate the deceleration rate during KEB Ride-Thru, ov suppression function, and Stall Prevention during deceleration (L3-04 = 2). | Default: 1.00 <br> Min.: 0.10 <br> Мах.: 10.00 | - |
| $\begin{aligned} & \text { L3-22 } \\ & \text { (4F9) } \end{aligned}$ | Deceleration Time at Stall Prevention during Acceleration | Sets the deceleration time used for Stall Prevention during acceleration in OLV/PM. | Default: 0.0 s <br> Min.: 0.0 <br> Max.: 6000 | - |
| $\begin{aligned} & \text { L3-23 } \\ & (4 \mathrm{FD}) \end{aligned}$ | Automatic Reduction Selection for Stall Prevention during Run | 0: Sets the Stall Prevention level set in L3-04 that is used throughout the entire frequency range. <br> 1: Automatic Stall Prevention level reduction in the constant output range. The lower limit value is $40 \%$ of L3-06. | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { L3-24 } \\ (46 \mathrm{E}) \end{gathered}$ | Motor Acceleration Time for Inertia Calculations | Sets the time needed to accelerate the uncoupled motor at rated torque from stop to the maximum frequency. | Default: ${ }^{<5><6>}$ <7> Min: 0.001 s Max: 10.000 s | - |

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :---: | :--- | :--- | :--- | :---: |
| L3-25 <br> (46F) | Load Inertia Ratio | Sets the ratio between the motor and machine inertia. | Default: 1.0 <br> Min.: 1.0 <br> Max.: 1000.0 |  |
| L3-26 <br> (455) | Additional DC Bus <br> Capacitors | When DC bus capacitors have been added externally, be sure to add those <br> values to the internal capacitor table for proper DC bus calculations. | Default: $0 \mu \mathrm{~F}$ <br> Min: 0 <br> Max: 65000 | - |
| L3-27 <br> (456) | Stall Prevention Detection <br> Time | Sets the time the current must exceed the Stall Prevention level to activate <br> Stall Prevention. | Default: 50 ms <br> Min.: 0 <br> Max.: 5000 | - |

<1> Upper limit is dependent on parameters C6-01, Drive Duty Selection, and L8-38, Frequency Reduction Selection.
$<2>$ The setting range is 0 to 2 in OLV/PM control mode. The setting range is 0 and 1 in CLV or AOLV/PM control modes.
$<3>$ Default setting is dependent on parameter E1-01, Input voltage Setting.
$<4>$ Default setting is determined by parameter A1-02, Control Mode Setting.
<5> Parameter value changes automatically if E2-11 is manually changed or changed by Auto-Tuning.
<6> Default setting is dependent on parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
$<7>$ Default setting is dependent on parameter E5-01, Motor Code Selection.
$<8>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives, but set the value below 1040 Vdc (overvoltage protection level).

## L4: Speed Detection

| No. (Addr Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { L4-01 } \\ (499) \end{gathered}$ | Speed Agreement Detection Level | L4-01 sets the frequency detection level for digital output functions $\mathrm{H} 2-\mathrm{\square} \square=2,3,4,5$. | Default: 0.0 Hz <br> Min.: 0.0 <br> Max.: 400.0 | - |
| $\begin{aligned} & \text { L4-02 } \\ & (49 \mathrm{~A}) \end{aligned}$ | Speed Agreement Detection Width | L4-02 sets the hysteresis or allowable margin for speed detection. | $\begin{aligned} & \hline \text { Default: <l> } \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 20.0 \\ & \hline \end{aligned}$ | - |
| $\begin{aligned} & \text { L4-03 } \\ & (49 B) \end{aligned}$ | Speed Agreement Detection Level (+/-) | L4-03 sets the frequency detection level for digital output functions $\mathrm{H} 2-\mathrm{\square} \square=13,14,15,16$. | Default: 0.0 Hz <br> Min.: -400.0 <br> Max.: 400.0 | - |
| $\begin{aligned} & \text { L4-04 } \\ & (49 \mathrm{C}) \end{aligned}$ | Speed Agreement Detection Width (+/-) | L4-04 sets the hysteresis or allowable margin for speed detection. | Default: ${ }^{<1>}$ <br> Min.: 0.0 <br> Max.: 20.0 | - |
| $\begin{aligned} & \text { L4-05 } \\ & \text { (49D) } \end{aligned}$ | Frequency Reference Loss Detection Selection | 0: Stop. Drive stops when the frequency reference is lost. <br> 1: Run. Drive runs at a reduced speed when the frequency reference is lost. | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { L4-06 } \\ & (4 \mathrm{C} 2) \end{aligned}$ | Frequency Reference at Reference Loss | Sets the percentage of the frequency reference that the drive should run with when the frequency reference is lost. | Default: 80\% <br> Min.: 0.0 <br> Мах.: 100.0 | - |
| $\begin{gathered} \text { L4-07 } \\ (470) \\ \hline \end{gathered}$ | Speed Agreement Detection Selection | 0 : No detection during baseblock. <br> 1: Detection always enabled. | Default: 0 <br> Range: 0,1 | - |

$<1>$ Default setting is dependent on parameter A1-02, Control Method Selection.

## - L5: Fault Restart

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :--- | :--- | :--- | :--- | :---: |
| L5-01 <br> (49E) | Number of Auto Restart <br> Attempts | Sets the number of times the drive may attempt to restart after the following <br> faults occur: GF, LF, oC, ov, PF, rH, rr, oL1, oL2, oL3, oL4, STo, Uv1. | Default: 0 <br> Min.: 0 <br> Max.: 10 | - |
| L5-02 <br> $(49 F)$ | Auto Restart Fault Output <br> Operation Selection | 0: Fault output not active. <br> 1: Fault output active during restart attempt. | Default: 0 <br> Range: 0,1 | - |
| L5-04 <br> $(46 C)$ | Fault Reset Interval Time | Sets the amount of time to wait between performing fault restarts. | Default: 10.0 s <br> Min.: 0.5 <br> Max.: 600.0 | - |

## B. 8 L: Protection Function

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :---: | :--- | :--- | :--- | :---: |
| L5-05 <br> (467) | Fault Reset Operation <br> Selection | 0: Continuously attempt to restart while incrementing restart counter only at <br> a successful restart (same as F7 and G7). <br> 1: Attempt to restart with the interval time set in L5-04 and increment the <br> restart counter with each attempt (same as V7). | Default: 0 <br> Range: 0,1 | - |

## L6: Torque Detection

| $\begin{aligned} & \text { No. } \\ & \text { (Addr. } \\ & \text { Hex) } \\ & \hline \end{aligned}$ | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { L6-01 } \\ & (4 \mathrm{~A} 1) \end{aligned}$ | Torque Detection Selection 1 | 0: Disabled <br> 1: oL3 detection only active during speed agree, operation continues after detection <br> 2: oL3 detection always active during run, operation continues after detection <br> 3: oL3 detection only active during speed agree, output shuts down on an oL3 fault <br> 4: oL3 detection always active during run, output shuts down on an oL3 fault <br> 5: UL3 detection only active during speed agree, operation continues after detection <br> 6: UL3 detection always active during run, operation continues after detection <br> 7: UL3 detection only active during speed agree, output shuts down on an oL3 fault <br> 8: UL3 detection always active during run, output shuts down on an oL3 fault | Default: 0 <br> Range: 0 to 8 | - |
| $\begin{aligned} & \text { L6-02 } \\ & (4 \mathrm{~A} 2) \end{aligned}$ | Torque Detection Level 1 | Sets the overtorque and undertorque detection level. | $\begin{aligned} & \text { Default: } 150 \% \\ & \text { Min.: } 0 \\ & \text { Max.: } 300 \end{aligned}$ | - |
| $\begin{aligned} & \text { L6-03 } \\ & (4 \mathrm{~A} 3) \end{aligned}$ | Torque Detection Time 1 | Sets the time an overtorque or undertorque condition must exist to trigger torque detection 1 . | $\begin{aligned} & \text { Default: } 0.1 \mathrm{~s} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 10.0 \end{aligned}$ | - |
| $\begin{aligned} & \text { L6-04 } \\ & (4 \mathrm{~A} 4) \end{aligned}$ | Torque Detection Selection 2 | 0: Disabled <br> 1: oL4 detection only active during speed agree, operation continues after detection <br> 2: oL4 detection always active during run, operation continues after detection 3: oL4 detection only active during speed agree, output shuts down on an oL4 fault <br> 4: oL4 detection always active during run, output shuts down on an oL4 fault <br> 5: UL4 detection only active during speed agree, operation continues after detection <br> 6: UL4 detection always active during run, operation continues after detection 7: UL4 detection only active during speed agree, output shuts down on an oL4 fault <br> 8: UL4 detection always active during run, output shuts down on an oL4 fault | Default: 0 <br> Range: 0 to 8 | - |
| $\begin{aligned} & \text { L6-05 } \\ & \text { (4A5) } \end{aligned}$ | Torque Detection Level 2 | Sets the overtorque and undertorque detection level. | $\begin{aligned} & \text { Default: } 150 \% \\ & \text { Min.: } 0 \\ & \text { Max.: } 300 \end{aligned}$ | - |
| $\begin{aligned} & \text { L6-06 } \\ & (4 \mathrm{~A} 6) \end{aligned}$ | Torque Detection Time 2 | Sets the time an overtorque or undertorque condition must exist to trigger torque detection 2 . | $\begin{aligned} & \text { Default: } 0.1 \mathrm{~s} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 10.0 \end{aligned}$ | - |
| $\begin{gathered} \text { L6-08 } \\ (468) \end{gathered}$ | Mechanical Weakening Detection Operation | This function can detect an overtorque or undertorque in a certain speed range as a result of machine fatigue. It is triggered by a specified operation time and uses the oL1 detection settings (L6-01 and L6-03). <br> 0 : Mechanical Weakening Detection disabled. <br> 1: Continue running (alarm only). Detected when the speed (signed) is greater than L6-09. <br> 2: Continue running (alarm only). Detected when the speed (not signed) is greater than L6-09. <br> 3: Interrupt drive output (fault). Detected when the speed (signed) is greater than L6-09. <br> 4: Interrupt drive output (fault). Detected when the speed (not signed) is greater than L6-09. <br> 5: Continue running (alarm only). Detected when the speed (signed) is less than L6-09. <br> 6: Continue running (alarm only). Detected when the speed (not signed) is less than L6-09. <br> 7: Interrupt drive output (fault). Detected when the speed (signed) is less than L6-09. <br> 8: Interrupt drive output (fault). Detected when the speed (not signed) is less than L6-09. | Default: 0 <br> Range: 0 to 8 | - |

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :---: | :--- | :--- | :--- | :---: |
| L6-09 <br> (469) | Mechanical Weakening <br> Detection Speed Level | Sets the speed that triggers Mechanical Weakening Detection. When L6-08 is <br> set for an unsigned value, the absolute value is used if the setting is negative. | Default: $110.0 \%$ <br> Min.: -110.0 <br> Max.: 110.0 | - |
| L6-10 <br> (46A) | Mechanical Weakening <br> Detection Time | Sets the time mechanical weakening has to be detected before an alarm or fault <br> is triggered. | Default: 0.1 s <br> Min.: 0.0 <br> Max.: 10.0 | - |
| L6-11 <br> (46B) | Mechanical Weakening <br> Detection Start Time | Sets the operation time (U1-04) required before Mechanical Weakening <br> Detection is active. | Default: 0 h <br> Min.: 0 <br> Max.: 65535 | - |

## - L7: Torque Limit

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { L7-01 } \\ & \text { (4A7) } \end{aligned}$ | Forward Torque Limit | Sets the torque limit value as a percentage of the motor rated torque. Four individual quadrants can be set. | Default: 200\% <br> Min.: 0 <br> Max.: 300 | 119 |
| $\begin{aligned} & \text { L7-02 } \\ & (4 \mathrm{~A} 8) \end{aligned}$ | Reverse Torque Limit |  | $\begin{aligned} & \text { Default: } 200 \% \\ & \text { Min.: } 0 \\ & \text { Max.: } 300 \end{aligned}$ | 119 |
| $\begin{aligned} & \text { L7-03 } \\ & \text { (4A9) } \end{aligned}$ | Forward Regenerative Torque Limit |  | $\begin{aligned} & \hline \text { Default: } 200 \% \\ & \text { Min.: } 0 \\ & \text { Max.: } 300 \end{aligned}$ | 119 |
| $\begin{aligned} & \text { L7-04 } \\ & (4 \mathrm{AA}) \end{aligned}$ | Reverse Regenerative Torque Limit |  | $\begin{aligned} & \text { Default: 200\% } \\ & \text { Min.: 0 } \\ & \text { Max.: } 300 \end{aligned}$ | 119 |
| $\begin{aligned} & \text { L7-06 } \\ & (4 \mathrm{AC}) \end{aligned}$ | Torque Limit Integral Time Constant | Sets the integral time constant for the torque limit. | Default: 200 ms Min: 5 <br> Max: 10000 | - |
| $\begin{aligned} & \text { L7-07 } \\ & (4 \mathrm{C} 9) \end{aligned}$ | Torque Limit Control Method Selection during Accel/Decel | 0: Proportional control (changes to integral control at constant speed). Use this setting when acceleration to the desired speed should take precedence over the torque limit. <br> 1: Integral control. Set L7-07 to 1 if the torque limit should take precedence. | Default: 0 <br> Range: 0,1 | - |

## L8: Drive Protection

| No. (Addr Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { L8-01 } \\ & (4 \mathrm{AD}) \end{aligned}$ | Internal Dynamic Braking Resistor Protection Selection (ERF type) | 0: Resistor overheat protection disabled <br> 1: Resistor overheat protection enabled <br> Note: This parameter is not available in models CIMR-AD4A0930 and 4A1200. | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { L8-02 } \\ & (4 \mathrm{AE}) \end{aligned}$ | Overheat Alarm Level | An overheat alarm occurs when heatsink temperature exceeds the L8-02 level. | $\begin{aligned} & \text { Default: }<1> \\ & \text { Min.: } 500^{\circ} \mathrm{C} \\ & \text { Max.: } 150{ }^{\circ} \mathrm{C} \end{aligned}$ | - |
| $\begin{aligned} & \text { L8-03 } \\ & (4 \mathrm{AF}) \end{aligned}$ | Overheat Pre-Alarm Operation Selection | 0 : Ramp to stop. A fault is triggered. <br> 1: Coast to stop. A fault is triggered. <br> 2: Fast Stop. Decelerate to stop using the deceleration time in C1-09. A fault is triggered. <br> 3: Continue operation. An alarm is triggered. <br> 4: Continue operation at reduced speed as set in L8-19. | Default: 3 <br> Range: 0 to 4 | - |
| $\begin{aligned} & \text { L8-05 } \\ & (4 \mathrm{~B} 1) \end{aligned}$ | Input Phase Loss Protection Selection | Selects the detection of input current phase loss, power supply voltage imbalance, or main circuit electrolytic capacitor deterioration. <br> 0: Disabled <br> 1: Enabled | Default: 1 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { L8-07 } \\ & \text { (4B3) } \end{aligned}$ | Output Phase Loss Protection Selection | 0: Disabled <br> 1: Enabled (triggered by a single phase loss) <br> 2: Enabled (triggered when two phases are lost) | Default: 1 <br> Range: 0 to 2 | - |
| $\begin{aligned} & \text { L8-09 } \\ & \text { (4B5) } \end{aligned}$ | Output Ground Fault Detection Selection | 0: Disabled <br> 1: Enabled | Default: <1> <br> Range: 0, 1 | - |

## B. 8 L: Protection Function

| No. (Addr Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \hline \text { L8-10 } \\ & (4 \mathrm{~B} 6) \end{aligned}$ | Heatsink Cooling Fan Operation Selection | 0: During run only. Fan operates only during run for L8-11 seconds after stop. 1: Fan always on. Cooling fan operates whenever the drive is powered up. | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { L8-11 } \\ & \text { (4B7) } \end{aligned}$ | Heatsink Cooling Fan Off Delay Time | Sets a delay time to shut off the cooling fan after the Run command is removed when $\mathrm{L} 8-10=0$. | Default: 60 s <br> Min.: 0 <br> Max.: 300 | - |
| $\begin{aligned} & \text { L8-12 } \\ & \text { (4B8) } \end{aligned}$ | Ambient Temperature Setting | Enter the ambient temperature. This value adjusts the oL2 detection level. | $\begin{aligned} & \text { Default: } 40^{\circ} \mathrm{C} \\ & \text { Min.: }-10 \\ & \text { Max.: } 50 \end{aligned}$ | - |
| $\begin{aligned} & \text { L8-15 } \\ & (4 \mathrm{BB}) \end{aligned}$ | oL2 Characteristics Selection at Low Speeds | 0: No oL2 level reduction below 6 Hz . <br> 1: oL2 level is reduced linearly below 6 Hz . It is halved at 0 Hz . | Default: 1 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { L8-18 } \\ & (4 \mathrm{BE}) \end{aligned}$ | Software Current Limit Selection | 0: Disabled <br> 1: Enabled | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { L8-19 } \\ & (4 \mathrm{BF}) \end{aligned}$ | Frequency Reduction Rate during Overheat Pre-Alarm | Specifies the frequency reference reduction gain at overheat pre-alarm when L8-03 $=4$. | Default: 0.8 <br> Min.: 0.1 <br> Max.: 0.9 | - |
| $\begin{aligned} & \mathrm{L} 8-27 \\ & (4 \mathrm{DD}) \end{aligned}$ | Overcurrent Detection Gain | Sets the gain for overcurrent detection as a percentage of the motor rated current. Overcurrent is detected using the lower value between the overcurrent level of the drive or the value set to L8-27. | $\begin{aligned} & \text { Default: } 300.0 \% \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 300.0 \end{aligned}$ | - |
| $\begin{aligned} & \hline \text { L8-29 } \\ & \text { (4DF) } \\ & \hline \end{aligned}$ | Current Unbalance Detection (LF2) | 0: Disabled <br> 1: Enabled | Default: 1 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { L8-32 } \\ & \text { (4E2) } \end{aligned}$ | Main Contactor and Cooling Fan Power Supply Failure Selection | Determines drive response when a fault occurs with the internal cooling fan. <br> 0: Ramp to stop <br> 1: Coast to stop <br> 2: Fast stop (Decelerate to stop using the deceleration time set to C1-09) <br> 3: Alarm only ("FAn" will flash) <br> 4: Continue operation at reduced speed as set to L8-19. | Default: 1 <br> Range: 0 to 4 | - |
| $\begin{aligned} & \text { L8-35 } \\ & (4 \mathrm{EC}) \end{aligned}$ | Installation Method Selection | 0: IP00/Open-Chassis enclosure <br> Side-by-Side mounting <br> 2: IP20/NEMA Type 1 enclosure <br> 3: Finless model drive or external heatsink installation | $\begin{aligned} & \text { Default: <1><2> } \\ & <3> \\ & \text { Range: } 0 \text { to } 3 \end{aligned}$ | - |
| $\begin{aligned} & \text { L8-38 } \\ & (4 \mathrm{EF}) \end{aligned}$ | Carrier Frequency <br> Reduction | 0: Disabled <br> 1: Enabled below 6 Hz <br> 2: Enabled for the entire speed range | Default: <4> Range: 0 to 2 | - |
| $\begin{gathered} \text { L8-40 } \\ (4 \mathrm{~F} 1) \end{gathered}$ | Carrier Frequency Reduction Off Delay Time | Sets the time that the drive continues running with reduced carrier frequency after the carrier reduction condition is gone. Setting 0.00 s disables the carrier frequency reduction time. | Default: < ${ }^{\text {s }}$ <br> Min.: 0.00 s <br> Max.: 2.00 s | - |
| $\begin{aligned} & \text { L8-41 } \\ & (4 \mathrm{~F} 2) \end{aligned}$ | High Current Alarm Selection | 0: Disabled <br> 1: Enabled. An alarm is triggered at output currents above $150 \%$ of drive rated current. | Default: 0 <br> Range: 0,1 | - |
| $\begin{gathered} \text { L8-55 } \\ (45 \mathrm{~F}) \end{gathered}$ | Internal Braking Transistor Protection | 0: Disabled. Disable when using a regen converter or optional braking unit. 1: Protection enabled. <br> Note: This parameter is not available in models CIMR-AD4A0930 and 4A1200. | Default: 1 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { L8-78 } \\ & (2 \mathrm{CC}) \end{aligned}$ | Power Unit Output Phase Loss Protection | Enables motor protection in the event of output phase loss. <br> 0: Disabled <br> 1: Enabled <br> Note: This parameter is only available in models CIMR-AD4A0930 and 4A1200. | Default: 1 <br> Range: 0,1 | - |

$<1>$ Default setting is dependent on parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.
$<2>$ Parameter setting value is not reset to the default value when the drive is initialized.
$<3>$ Default setting is determined by the drive model:
Setting 2: Model code CIMR-AD2A0004 to 2A0211, 4A0002 to 4A0165, and 5A0003 to 5A0242
Setting 0: Model code CIMR-AD2A0250 to 2A0415 and 4A0208 to 4A1200
$<4>$ Default setting is dependent on parameters A1-02, Control Method Selection, and o2-04, Drive Model Selection.

## B. 9 n: Special Adjustment

The n parameters adjust more advanced performance characteristics such as Hunting Prevention, speed feedback detection, High Slip Braking, and Online Tuning for motor line-to-line resistance.

## n1: Hunting Prevention

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :---: | :--- | :--- | :--- | :--- |
| n1-01 <br> $(580)$ | Hunting Prevention <br> Selection | 0: Disabled <br> 1: Enabled | Default: 1 <br> Range: 0,1 | - |
| n1-02 <br> $(581)$ | Hunting Prevention Gain <br> Setting | If the motor vibrates while lightly loaded, increase the gain by 0.1 until <br> vibration ceases. If the motor stalls, decrease the gain by 0.1 until the stalling <br> ceases. | Default: 1.00 <br> Min.: 0.00 <br> Max.: 2.50 | - |
| n1-03 <br> (582) | Hunting Prevention Time <br> Constant | Sets the time constant used for Hunting Prevention. | Default: $<1>$ <br> Min.: 0 ms <br> Max.: 500 ms | - |
| n1-05 <br> $(530)$ | Hunting Prevention Gain <br> while in Reverse | Sets the gain used for Hunting Prevention. If set to 0, the gain set to n1-02 is <br> used for operation in reverse. | Default: 0.00 <br> Min.: 0.00 <br> Max.: 2.50 | - |

$<1>$ Default setting is dependent on parameter 02-04, Drive Model Selection.

## n2: Speed Feedback Detection Control (AFR) Tuning

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :---: | :--- | :--- | :--- | :--- |
| n2-01 <br> (584) | Speed Feedback Detection <br> Control (AFR) Gain | Sets the internal speed feedback detection control gain in the automatic <br> frequency regulator (AFR). <br> If hunting occurs, increase the set value. If response is low, decrease the set <br> value. | Default: 1.00 <br> Min.: 0.00 <br> Max.: 10.00 | - |
| n2-02 <br> (585) | Speed Feedback Detection <br> Control (AFR) Time <br> Constant 1 | Sets the time constant used for speed feedback detection control (AFR). | Default: 50 ms <br> Min.: 0 <br> Max.: 2000 | - |
| n2-03 <br> (586) | Speed Feedback Detection <br> Control (AFR) Time <br> Constant 2 | Sets the AFR time constant to be used during Speed Search and during regen. | Default: 750 ms <br> Min.: 0 <br> Max.: 2000 | - |

## n3: High Slip Braking (HSB) and Overexcitation Braking

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { n3-01 } \\ & (588) \end{aligned}$ | High-Slip Braking Deceleration Frequency Width | Sets the output frequency reduction step width for when the drive stops the motor using HSB. Set as a percentage of the maximum output frequency. Increase this setting if overvoltage occurs during HSB. | Default: 5\% <br> Min.: 1 <br> Max.: 20 | - |
| $\begin{gathered} \text { n3-02 } \\ (589) \end{gathered}$ | High-Slip Braking Current Limit | Sets the current limit during HSB as a percentage of the motor rated current. | Default: <1> <br> Min.: 100\% <br> Max.: 200\% | - |
| $\begin{aligned} & \text { n3-03 } \\ & (58 \mathrm{~A}) \end{aligned}$ | High-Slip Braking Dwell Time at Stop | Sets the time the drive will run with minimum frequency (E1-09) at the end of deceleration. <br> If this time is set too low, the machine inertia can cause the motor to rotate slightly after HSB. | Default: 1.0 s <br> Min.: 0.0 <br> Max.: 10.0 | - |
| $\begin{aligned} & \text { n3-04 } \\ & \text { (58B) } \end{aligned}$ | High-Slip Braking Overload Time | Sets the time required for an HSB overload fault (oL7) to occur when the drive output frequency does not change during an HSB stop. This parameter does not typically require adjustment. | Default: 40 s <br> Min.: 30 <br> Max.: 1200 | - |
| $\begin{aligned} & \text { n3-13 } \\ & (531) \end{aligned}$ | Overexcitation Deceleration Gain | Sets the gain applied to the V/f pattern during Overexcitation Deceleration (L3-04 = 4). | Default: 1.10 <br> Min.: 1.00 <br> Max.: 1.40 | - |
| $\begin{gathered} \text { n3-14 } \\ (532) \end{gathered}$ | High Frequency Injection during Overexcitation Deceleration | 0: Disabled <br> 1: Enabled | Default: 0 <br> Range: 0,1 | - |

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :---: | :--- | :--- | :--- | :---: |
| n3-21 <br> (579) | High-Slip Suppression <br> Current Level | Sets output current level at which the drive will start reducing the <br> overexcitation gain in order to prevent a too high motor slip during <br> Overexcitation Deceleration. Set as a percentage of the drive rated current. | Default: $100 \%$ <br> Min.: 0 <br> Max.: 150 | - |
| n3-23 <br> (57B) | Overexcitation Operation <br> Selection | 0: Enabled in both directions <br> 1: Enabled only when rotating forward <br> 2: Enabled only when in reverse | Default: 0 <br> Range: 0 to 2 | - |

$<1>$ Default setting is dependent on parameters C6-01, Drive Duty Selection, and L8-38, Frequency Reduction Selection.

## - n5: Feed Forward Control

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { n5-01 } \\ & \text { (5B0) } \end{aligned}$ | Feed Forward Control Selection | 0: Disabled <br> 1: Enabled | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \mathrm{n} 5-02 \\ & (5 \mathrm{~B} 1) \end{aligned}$ | Motor Acceleration Time | Sets the time required to accelerate the motor at the rated torque from stop to rated speed. | Default: <1> <2> <br> Min.: 0.001 s <br> Max.: 10.000 s | - |
| $\begin{aligned} & \text { n5-03 } \\ & \text { (5B2) } \end{aligned}$ | Feed Forward Control Gain | Sets the ratio between motor and load inertia. Lower this setting if overshoot occurs at the end of acceleration. | Default: 1.00 <br> Min.: 0.00 <br> Max.: 100.00 | - |

$<1>$ Default setting is dependent on parameter E5-01, Motor Code Selection.
$<2>$ Default setting is dependent on parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.

## - n6: Online Tuning

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :--- | :--- | :--- | :--- | :--- |
| n6-01 <br> $(570)$ | Online Tuning Selection | 0: Disabled <br> 1: Line-to-line resistance tuning <br> 2: Voltage correction. Setting not possible when Energy Saving is enabled <br> (b8-01). | Default: 0 <br> Range: 0 to 2 | - |
| n6-05 <br> (5C7) | Online Tuning Gain | Decrease this setting for motors with a relatively large rotor time constant. If <br> overload occurs, increase this setting slowly in increments of 0.10. | Default: 1.00 <br> Min.: 0.10 <br> Max.: 5.00 | - |

## n8: PM Motor Control Tuning

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { n8-01 } \\ (540) \end{gathered}$ | Initial Rotor Position Estimation Current | Sets the current used for initial rotor position estimation as a percentage of the motor rated current (E5-03). If the motor nameplate lists an "Si" value, that value should be entered here. | Default: 50\% <br> Min.: 0 <br> Max.: 100 | - |
| $\begin{gathered} \text { n8-02 } \\ (541) \end{gathered}$ | Pole Attraction Current | Sets the current during initial polar attraction as a percentage of the motor rated current. Enter a high value when attempting to increase starting torque. | Default: 80\% <br> Min.: 0 <br> Max.: 150 | - |
| $\begin{aligned} & \text { n8-35 } \\ & (562) \end{aligned}$ | Initial Rotor Position Detection Selection | 0: Pull-in <br> 1: High frequency injection <br> 2: Pulse injection | Default: 1 <br> Range: 0 to 2 | - |
| $\begin{gathered} \text { n8-45 } \\ (538) \end{gathered}$ | Speed Feedback Detection Control Gain | Increase this setting if hunting occurs. Decrease to lower the response. | Default: 0.80 <br> Min.: 0.00 <br> Max.: 10.00 | - |
| $\begin{aligned} & \text { n8-47 } \\ & (53 \mathrm{~A}) \end{aligned}$ | Pull-In Current <br> Compensation Time Constant | Sets the time constant to make the pull-in current reference and actual current value agree. Decrease the value if the motor begins to oscillate, and increase the value if it takes too long for the current reference to equal the output current. | Default: 5.0 s <br> Min.: 0.0 <br> Max.: 100.0 | - |
| $\begin{aligned} & \text { n8-48 } \\ & (53 \mathrm{~B}) \end{aligned}$ | Pull-In Current | Defines the d-Axis current reference during no-load operation at a constant speed. Set as a percentage of the motor rated current. Increase this setting if hunting occurs while running at constant speed. | Default: 30\% <br> Min.: 20 <br> Max.: 200 | - |

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { n8-49 } \\ & (53 \mathrm{C}) \end{aligned}$ | d-Axis Current for High Efficiency Control | Sets the d-Axis current reference when running a high load at constant speed. Set as a percentage of the motor rated current. | Default: <1> <br> Min.: -200.0\% <br> Max.: 0.0\% | - |
| $\begin{aligned} & \text { n8-51 } \\ & (53 \mathrm{E}) \end{aligned}$ | Acceleration/Deceleration Pull-In Current | Sets the d-Axis current reference during acceleration/deceleration as a percentage of the motor rated current. Set to a high value when more starting torque is needed. | Default: 50\% <br> Min.: 0 <br> Max.: 200 | - |
| $\begin{aligned} & \text { n8-54 } \\ & (56 \mathrm{D}) \end{aligned}$ | Voltage Error Compensation Time Constant | Adjusts the value when hunting occurs at low speed. If hunting occurs with sudden load changes, increase n8-54 in increments of 0.1 . Reduce this setting if oscillation occurs at start. | Default: 1.00 s <br> Min.: 0.00 <br> Max.: 10.00 | - |
| $\begin{aligned} & \text { n8-55 } \\ & (56 \mathrm{E}) \end{aligned}$ | Load Inertia | Sets the ratio between motor and machine inertia. <br> 0: Lower than 1:10 <br> 1: Between 1:10 to 1:30 <br> 2: Between 1:30 to 1:50 <br> 3: Higher than 1:50 | Default: 0 <br> Min.: 0 <br> Max.: 3 | - |
| $\begin{gathered} \text { n8-57 } \\ (574) \end{gathered}$ | High Frequency Injection | 0: Disabled. Disable when using an SPM motor. <br> 1: Enabled. Use this setting to enhance the speed control range when using an IPM motor. | $\begin{array}{\|l} \text { Default: } 0 \\ \text { Range: } 0,1 \end{array}$ | - |
| $\begin{aligned} & \text { n8-62 } \\ & \text { (57D) } \end{aligned}$ | Output Voltage Limit | Prevents output voltage saturation. Should be set just below the voltage provided by the input power supply. | $\begin{array}{\|l} \text { Default: } 200.0 \mathrm{~V} \\ <2> \\ \text { Min.: } 0.0 \\ \text { Max.: } 230.0<2> \end{array}$ | - |
| $\begin{aligned} & \text { n8-65 } \\ & (65 \mathrm{C}) \end{aligned}$ | Speed Feedback Detection Control Gain during ov Suppression | Sets the gain used for internal speed feedback detection during ov suppression. | $\begin{aligned} & \text { Default: } 1.50 \\ & \text { Min.: } 0.00 \\ & \text { Max.: } 10.00 \\ & \hline \end{aligned}$ | - |
| $\begin{aligned} & \text { n8-69 } \\ & (65 \mathrm{D}) \\ & <3> \end{aligned}$ | Speed Calculation Gain | Sets the proportional gain for PLL control of an extended observer. There is normally no need to change this parameter from the default value. <br> Note: This parameter is not available in models CIMR-AD4A0930 and 4A1200. | Default: 1.00 <br> Min.: 0.00 <br> Max.: 20.00 | - |
| $\begin{aligned} & \text { n8-84 } \\ & (\text { (2D33) } \end{aligned}$ | Polarity Judge Current | Sets the current to determine polarity for the initial polarity calculation as a percentage of the motor rated current. <br> $100 \%=$ Motor rated current <br> Note: This parameter is not available in models CIMR-AD4A0930 and 4A1200. | Default: 100\% <br> Min.: 0 <br> Max.: 150 | - |

$<1>$ Default setting is dependent on parameter E5-01, Motor Code Selection.
$<2>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
<3> Available in drive software versions 1015 and later.

## B. 10 o: Operator-Related Settings

The o parameters set up the digital operator displays.

## - 01: Digital Operator Display Selection

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \hline \text { o1-01 } \\ & (500) \\ & \hline \text { BRUN } \end{aligned}$ | Drive Mode Unit Monitor Selection | Selects the content of the last monitor that is shown when scrolling through Drive Mode display. Enter the last three digits of the monitor parameter number to be displayed: UD-पロ. | Default: 106 <br> (Monitor U1-06) <br> Range: 104 to 809 | - |
| o1-02 <br> (501) <br> ©RuN | User Monitor Selection after Power Up | 1: Frequency reference (U1-01) <br> 2: Direction <br> 3: Output frequency (U1-02) <br> 4: Output current (U1-03) <br> 5: User-selected monitor (set by o1-01) | Default: 1 <br> Range: 1 to 5 | - |
| $\begin{gathered} \text { ol-03 } \\ (502) \end{gathered}$ | Digital Operator Display Selection | Sets the units the drive should use to display the frequency reference and motor speed monitors. <br> 0: 0.01 Hz <br> 1: $0.01 \%(100 \%=$ E1-04 $)$ <br> 2: $\mathrm{r} / \mathrm{min}$ (calculated using the number of motor poles setting in E2-04, E4-04, or E5-04) <br> 3: User-selected units (set by o1-10 and o1-11) | Default: <1> <br> Range: 0 to 3 | - |
| $\begin{gathered} \text { ol-04 } \\ (503) \end{gathered}$ | V/f Pattern Display Unit | $\begin{aligned} & \text { 0: } \mathrm{Hz} \\ & \text { 1: r/min } \end{aligned}$ | Default: <1> <br> Range: 0,1 | - |
| $\begin{aligned} & \hline \begin{array}{l} \text { ol-10 } \\ (520) \end{array} \end{aligned}$ | User-Set Display Units Maximum Value | These settings define the display values when o1-03 is set to 3 . o1-10 sets the display value that is equal to the maximum output frequency. ol-11 sets the position of the decimal position. | Default: <2> <br> Range: 1 to 60000 | - |
| $\begin{aligned} & \text { o1-11 } \\ & (521) \end{aligned}$ | User-Set Display Units Decimal Display |  | Default: <2> Range: 0 to 3 | - |

$<1>$ Default setting is dependent on parameter A1-02, Control Method Selection.
$<2>$ Default setting is dependent on parameter o1-03, Digital Operator Display Selection.

## 02: Digital Operator Keypad Functions

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { o2-01 } \\ (505) \\ \hline \end{gathered}$ | LO/RE Key Function Selection | 0: Disabled <br> 1: Enabled. LO/RE key switches between LOCAL and REMOTE operation. | Default: 1 <br> Range: 0,1 | - |
| $\begin{gathered} \text { o2-02 } \\ (506) \\ \hline \end{gathered}$ | STOP Key Function Selection | 0: Disabled. STOP key is disabled in REMOTE operation. <br> 1: Enabled. STOP key is always enabled. | Default: 1 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { o2-03 } \\ & (507) \end{aligned}$ | User Parameter Default Value | 0 : No change. <br> 1: Set defaults. Saves parameter settings as default values for a User Initialization. <br> 2: Clear all. Clears the default settings that have been saved for a User Initialization. | Default: 0 <br> Range: 0 to 2 | - |
| $\begin{aligned} & \text { o2-04 } \\ & (508) \end{aligned}$ | Drive Model Selection | Enter the drive model. Setting required only if installing a new control board. | Default: Determined by drive capacity | - |
| $\begin{aligned} & \text { o2-05 } \\ & (509) \end{aligned}$ | Frequency Reference Setting Method Selection | 0: ENTER key must be pressed to enter a frequency reference. <br> 1: ENTER key is not required. The frequency reference can be adjusted using the up and down arrow keys only. | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { o2-06 } \\ & (50 \mathrm{~A}) \end{aligned}$ | Operation Selection when Digital Operator is Disconnected | 0 : The drive continues operating if the digital operator is disconnected. 1: An oPr fault is triggered and the motor coasts to stop. | $\begin{aligned} & \text { Default: } 1 \\ & \text { Range: } 0,1 \end{aligned}$ | - |
| $\begin{aligned} & \text { o2-07 } \\ & (527) \end{aligned}$ | Motor Direction at Power Up when Using Operator | 0: Forward <br> 1: Reverse <br> This parameter requires assigning drive operation to the digital operator. | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \hline \text { o2-09 } \\ & \text { (50D) } \end{aligned}$ | - | Factory use. | - | - |

## - 03: Copy Function

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :--- | :--- | :--- | :--- | :--- |
| o3-01 <br> $(515)$ | Copy Function Selection | 0: No action <br> 1: Read parameters from the drive, saving them onto the digital operator. <br> 2: Copy parameters from the digital operator, writing them to the drive. <br> 3: Verify parameter settings on the drive to check if they match the data saved <br> on the operator. | Default: 0 <br> Range: 0 to 3 | - |
| o3-02 <br> $(516)$ | Copy Allowed Selection | 0: Read operation prohibited <br> 1: Read operation allowed | Default: 0 <br> Range: 0,1 | - |

## o4: Maintenance Monitor Settings

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { o4-01 } \\ & (50 \mathrm{~B}) \end{aligned}$ | Cumulative Operation Time Setting | Sets the value for the cumulative operation time of the drive in units of 10 h . | $\begin{aligned} & \text { Default: } 0 \mathrm{~h} \\ & \text { Min.: } 0 \\ & \text { Max.: } 9999 \end{aligned}$ | - |
| $\begin{aligned} & \hline \text { o4-02 } \\ & (50 \mathrm{C}) \end{aligned}$ | Cumulative Operation Time Selection | 0: Logs power-on time <br> 1: Logs operation time when the drive output is active (output operation time). | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { o4-03 } \\ & (50 \mathrm{E}) \end{aligned}$ | Cooling Fan Operation Time Setting | Sets the value of the fan operation time monitor U4-03 in units of 10 h . | Default: 0 h <br> Min.: 0 <br> Мах.: 9999 | - |
| $\begin{aligned} & \text { o4-05 } \\ & \text { (51D) } \end{aligned}$ | Capacitor Maintenance Setting | Sets the value of the Maintenance Monitor for the capacitors. See U4-05 to check when the capacitors may need to be replaced. | Default: 0\% <br> Min.: 0 <br> Max.: 150 | - |
| $\begin{aligned} & \text { o4-07 } \\ & (523) \end{aligned}$ | DC Bus Pre-Charge Relay Maintenance Setting | Sets the value of the Maintenance Monitor for the soft charge bypass relay. See U4-06 to check when the bypass relay may need to be replaced. | $\begin{aligned} & \text { Default: } 0 \% \\ & \text { Min.: } 0 \\ & \text { Max.: } 150 \end{aligned}$ | - |
| $\begin{aligned} & \text { o4-09 } \\ & (525) \end{aligned}$ | IGBT Maintenance Setting | Sets the value of the Maintenance Monitor for the IGBTs. See U4-07 for IGBT replacement times. | Default: 0\% <br> Min.: 0 <br> Max.: 150 | - |
| $\begin{aligned} & \text { o4-11 } \\ & (510) \end{aligned}$ | U2, U3 Initialization | 0: U2-DI and U3-DI monitor data is not reset when the drive is initialized (A1-03). <br> 1: U2-D and U3-D monitor data is reset when the drive is initialized (A1-03). | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { o4-12 } \\ & (512) \end{aligned}$ | kWh Monitor Initialization | 0: U4-10 and U4-11 monitor data is not reset when the drive is initialized (A1-03). <br> 1: U4-10 and U4-11 monitor data is reset when the drive is initialized (A1-03). | Default: 0 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { o4-13 } \\ & (528) \end{aligned}$ | Number of Run Commands Counter Initialization | $\begin{aligned} & \text { 0: Number of Run commands counter is not reset when the drive is initialized } \\ & \text { (A1-03). } \\ & \text { 1: Number of Run commands counter is reset when the drive is initialized } \\ & \text { (A1-03). } \end{aligned}$ | Default: 0 <br> Range: 0,1 | - |

## B. 11 DriveWorksEZ Parameters

## q: DriveWorksEZ Parameters

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| q1-01 to <br> q6-07 <br> $(1600$ to <br> $1746)$ | DriveWorksEZ Parameters | Reserved for DriveWorksEZ | Refer to Help in the <br> DWEZ software. | - |

## r: DriveWorksEZ Connection Parameters

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :---: | :--- | :--- | :--- | :---: |
| r1-01 to <br> r1-40 <br> $(1840$ to <br> $1867)$ | DriveWorksEZ Connection <br> Parameters 1 to 20 (upper/ <br> lower) | DriveWorksEZ Connection Parameters 1 to 20 (upper/lower) | Default: 0 <br> Min.: 0 <br> Max.: FFFF |  |

## B. 12 T: Motor Tuning

Enter data into the following parameters to tune the motor and drive for optimal performance.

## - T1: Induction Motor Auto-Tuning

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \hline \text { T1-00 } \\ & (700) \\ & \hline \end{aligned}$ | Motor 1/Motor 2 Selection | $\begin{aligned} & \text { 1: Motor } 1 \text { (sets E1- } \square \square, \text { E2- } \square \square \text { ) } \\ & \text { 2: Motor } 2 \text { (sets E3- } \square \text {, E4- } \square \square \text { ) } \end{aligned}$ | Default: 1 <br> Range: 1, 2 | - |
| $\begin{aligned} & \mathrm{T} 1-01 \\ & (701) \\ & <1> \end{aligned}$ | Auto-Tuning Mode Selection | ```0: Rotational Auto-Tuning Stationary Auto-Tuning 1 Stationary Auto-Tuning for Line-to-Line Resistance 3: Rotational Auto-Tuning for V/f Control (necessary for Energy Savings and Speed Estimation Speed Search) 4: Stationary Auto-Tuning 2 Inertia Tuning (perform Rotational Auto-Tuning prior to Inertia Tuning) 9: ASR Gain Tuning (perform Rotational Auto-Tuning prior to ASR Gain Auto-Tuning)``` | Default: 0 <br> $\underset{<2>}{\operatorname{Range}} 0$ to 4; 8, 9 | - |
| $\begin{aligned} & \text { T1-02 } \\ & (702) \end{aligned}$ | Motor Rated Power | Sets the motor rated power as specified on the motor nameplate. <br> Note: Use the following formula to convert horsepower into kilowatts: $1 \mathrm{HP}=0.746 \mathrm{~kW}$. | Default: <3> <br> Min.: 0.00 kW <br> Max.: 650.00 kW | - |
| $\begin{aligned} & \text { T1-03 } \\ & (703) \end{aligned}$ | Motor Rated Voltage | Sets the motor rated voltage as specified on the motor nameplate. | Default: 200.0 V $<4>$ Min: 0.0 Max: $255.0^{<4>}$ | - |
| $\begin{aligned} & \text { T1-04 } \\ & (704) \end{aligned}$ | Motor Rated Current | Sets the motor rated current as specified on the motor nameplate. | Default: <3> Min.: $10 \%$ of drive rated current Max.: $200 \%$ of drive rated current | - |
| $\begin{aligned} & \text { T1-05 } \\ & (705) \end{aligned}$ | Motor Base Frequency | Sets the rated frequency of the motor as specified on the motor nameplate. | $\begin{aligned} & \text { Default: } 60.0 \mathrm{~Hz} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 400.0 \\ & \hline \end{aligned}$ | - |
| $\begin{aligned} & \text { T1-06 } \\ & (706) \end{aligned}$ | Number of Motor Poles | Sets the number of motor poles as specified on the motor nameplate. | Default: 4 <br> Min.: 2 <br> Max.: 48 | - |
| $\begin{aligned} & \text { T1-07 } \\ & (707) \end{aligned}$ | Motor Base Speed | Sets the rated speed of the motor as specified on the motor nameplate. | Default: $1750 \mathrm{r} / \mathrm{min}$ <br> Min.: 0 <br> Max.: 24000 | - |
| $\begin{aligned} & \text { T1-08 } \\ & (708) \end{aligned}$ | PG Number of Pulses Per Revolution | Sets the number of pulses per revolution for the PG being used (pulse generator or encoder). | Default: 1024 ppr <br> Min.: 1 <br> Max.: 60000 | - |
| $\begin{aligned} & \text { T1-09 } \\ & (709) \end{aligned}$ | Motor No-Load Current (Stationary Auto-Tuning) | Sets the no-load current for the motor. After setting the motor capacity to T1-02 and the motor rated current to T1-04, this parameter will automatically display the no-load current for a standard 4-pole Yaskawa motor. Enter the no-load current as indicated on the motor test report. | Default: - <br> Min.: 0 A <br> Max.: T1-04 | - |
| $\begin{aligned} & \text { T1-10 } \\ & \text { (70A) } \end{aligned}$ | Motor Rated Slip (Stationary Auto-Tuning) | Sets the motor rated slip. After setting the motor capacity to T1-02, this parameter will automatically display the motor slip for a standard 4-pole Yaskawa motor. Enter the motor slip as indicated on the motor test report. | Default: - <br> Min.: 0.00 Hz <br> Max.: 20.00 Hz | - |
| $\begin{aligned} & \text { T1-11 } \\ & (70 \mathrm{~B}) \end{aligned}$ | Motor Iron Loss | Sets the iron loss for determining the Energy Saving coefficient. The value is set to E2-10 (motor iron loss) set when the power is cycled. If T1-02 is changed, a default value appropriate for the motor capacity that was entered will appear. | Default: $14 \mathrm{~W}^{<5>}$ <br> Min.: 0 <br> Max.: 65535 | - |

$<1>$ The availability of certain Auto-Tuning methods depends on the control mode selected for the drive.
$<2>$ Default setting is determined by parameter A1-02, Control Method Setting.
$<3>$ Default setting is dependent on parameter o2-04, Drive Model Selection.
$<4>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
$<5>$ Default setting value differs depending on the motor code value and motor parameter settings.

## T2: PM Motor Auto-Tuning

| No. (Addr. Hex) | Name | Description | Values | Page |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { T2-01 } \\ & (750) \end{aligned}$ | PM Motor Auto-Tuning Mode Selection | 0: PM Motor Parameter Settings <br> 1: PM Stationary Auto-Tuning <br> 2: PM Stationary Auto-Tuning for Stator Resistance <br> 3: Z Pulse Offset Tuning <br> 8: Inertia Tuning <br> 9: ASR Gain Auto-Tuning <br> 11: Back EMF Constant Tuning ${ }^{<1>}$ <br> Prior to executing Inertia Tuning or ASR Gain Auto-Tuning, be sure to take the following steps: <br> - Perform Auto-Tuning for motor data $(\mathrm{T} 2-01=0,1$, or 2 ) or set the motor code to E5-01. <br> - Verify all motor data entered to the drive with the motor nameplate or the motor test report. <br> Note: Setting 11 is not available in models CIMR-A $\square 4$ A0930 and 4A1200. | Default: 0 <br> Range: 0 to 3; <br> 8, $9,11<2>$ | - |
| $\begin{aligned} & \mathrm{T} 2-02 \\ & (751) \end{aligned}$ | PM Motor Code Selection | Enter the motor code when using a Yaskawa PM motor. After entering the motor code, the drive automatically sets parameters T2-03 through T2-14. When using a motor without a supported motor code or a non-Yaskawa motor, set FFFF and adjust the other T2 parameters according to the motor nameplate or the motor test report. | Default: <3> <br> Min: 0000 <br> Max: FFFF | - |
| $\begin{aligned} & \hline \text { T2-03 } \\ & (752) \end{aligned}$ | PM Motor Type | 0: IPM motor <br> 1: SPM motor. Parameter T2-17 will not be displayed with this setting. | Default: 1 <br> Range: 0,1 | - |
| $\begin{aligned} & \text { T2-04 } \\ & (730) \end{aligned}$ | PM Motor Rated Power | Sets the motor rated power. <br> Note: Use the following formula to convert horsepower into kilowatts: $1 \mathrm{HP}=0.746 \mathrm{~kW}$. | Default: <4> Min.: 0.00 kW Max.: 650.00 kW | - |
| $\begin{aligned} & \mathrm{T} 2-05 \\ & (732) \end{aligned}$ | PM Motor Rated Voltage | Enter the motor rated voltage as indicated on the motor nameplate. | $\begin{aligned} & \text { Default: } 200.0 \mathrm{~V} \\ & <5> \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 255.0^{<5>} \end{aligned}$ | - |
| $\begin{aligned} & \text { T2-06 } \\ & (733) \end{aligned}$ | PM Motor Rated Current | Enter the motor rated current as indicated on the motor nameplate. | Default: <4> <br> Min.: $10 \%$ of drive rated current Max.: $200 \%$ of drive rated current | - |
| $\begin{aligned} & \text { T2-07 } \\ & (753) \end{aligned}$ | PM Motor Base Frequency | Enter the motor base frequency as indicated on the motor nameplate. | $\begin{aligned} & \text { Default: } 87.5 \mathrm{~Hz} \\ & \text { Min.: } 0.0 \\ & \text { Max.: } 400.0 \\ & \hline \end{aligned}$ | - |
| $\begin{aligned} & \mathrm{T} 2-08 \\ & (734) \end{aligned}$ | Number of PM Motor Poles | Enter the number of motor poles for the PM motor as indicated on the motor nameplate. | Default: 6 <br> Min.: 2 <br> Max.: 48 | - |
| $\begin{aligned} & \mathrm{T} 2-09 \\ & (731) \end{aligned}$ | PM Motor Base Speed | Enter the base speed for the PM motor as indicated on the motor nameplate. | Default: 1750 <br> $\mathrm{r} / \mathrm{min}$ <br> Min.: 0 <br> Max.: 24000 | - |
| $\begin{aligned} & \mathrm{T} 2-10 \\ & (754) \end{aligned}$ | PM Motor Stator Resistance | Enter the rotor resistance for the PM motor as indicated on the motor nameplate. | Default: <6> <br> Min.: $0.000 \Omega$ <br> Max.: $65.000 \Omega$ | - |
| $\begin{aligned} & \mathrm{T} 2-11 \\ & (735) \end{aligned}$ | PM Motor d-Axis Inductance | Enter the d-axis inductance for the PM motor as indicated on the motor nameplate. | Default: <6> <br> Min.: 0.00 mH <br> Max.: 600.00 mH | - |
| $\begin{aligned} & \mathrm{T} 2-12 \\ & (736) \end{aligned}$ | PM Motor q-Axis Inductance | Enter the q-axis inductance for the PM motor as indicated on the motor nameplate. | Default: < ${ }^{\text {¢ }}$ <br> Min.: 0.00 mH <br> Max.: 600.00 mH | - |
| $\begin{aligned} & \hline \text { T2-13 } \\ & (755) \end{aligned}$ | Induced Voltage Constant Unit Selection | $0: \mathrm{mV} /(\mathrm{r} / \mathrm{min})$. E5-09 will automatically be set to 0.0 , and $\mathrm{E} 5-24$ will be used. $1: \mathrm{mV} /(\mathrm{rad} / \mathrm{sec})$. E5-24 will automatically be set to 0.0 , and $\mathrm{E} 5-09$ will be used. | Default: 1 <br> Range: 0,1 | - |
| $\begin{aligned} & \mathrm{T} 2-14 \\ & (737) \end{aligned}$ | PM Motor Induced Voltage Constant | Enter the induced voltage coefficient for the PM motor as indicated on the motor nameplate. | Default: < ${ }^{\text {< }}$ <br> Min.: 0.1 <br> Max.: 2000.0 | - |

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :---: | :--- | :--- | :--- | :--- |
| T2-15 <br> (756) | Pull-In Current Level for PM <br> Motor Tuning | Sets the amount of pull-in current to use for Auto-Tuning as a percentage of <br> the motor rated current. Increase this setting for high inertia loads. | Default: $30 \%$ <br> Min.: 0 <br> Max.: 120 | - |
| T2-16 <br> (738) | PG Number of Pulses Per <br> Revolution for PM Motor <br> Tuning | Sets the number of pulses per revolution for the PG being used (pulse generator <br> or encoder). | Default: 1024 ppr <br> Min.: $:$ <br> Max.: 15000 | - |
| T2-17 <br> (757) | Encoder Z-Pulse Offset | Sets the offset between encoder offset and the rotor magnetic axis. | Default: 0.0 deg <br> Min.: -180.0 <br> Max.: 180.0 | - |

<1> Available in drive software versions 1015 and later.
$<2>$ The setting range is determined by parameter A1-02, Control Method Selection.
$<3>$ Default setting is dependent on parameters A1-02, Control Method Selection, and o2-04, Drive Model Selection.
$<4>$ Default setting is dependent on parameter 02-04, Drive Model Selection.
<5> Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
$<6>$ Default setting is dependent on parameter T2-02, PM Motor Code Selection, and the drive capacity.

## T3: ASR and Inertia Tuning

| No. <br> (Addr. <br> Hex) | Name | Description | Values | Page |
| :---: | :--- | :--- | :--- | :--- |
| T3-01 <br> $(760)$ <br> $<1>$ | Test Signal Frequency | Sets the frequency of the test signal used during Inertia Tuning and ASR Gain <br> Auto-Tuning. Reduce this value if the inertia is large or if a fault occurs. | Default: 3.0 Hz <br> Min.: 0.1 <br> Max.: 20.0 | - |
| T3-02 <br> $(761)$ <br> $<1>$ | Test Signal Amplitude | Sets the amplitude of the test signal used during Inertia and ASR Gain Auto- <br> Tuning. Reduce this value if the inertia is too large or if a fault occurs. | Default: 0.5 rad <br> Min.: 0.1 <br> Max.: 10.0 | - |
| T3-03 <br> $(762)$ <br> $<1>$ | Motor Inertia | Sets the motor inertia. Default setting is the inertia of a Yaskawa motor. | Default: $<2><3>$ <br> Min.: $0.0001 \mathrm{kgm}^{2}$ <br> Max.: $600.00 \mathrm{kgm}^{2}$ | - |
| T3-04 <br> $(763)$ <br> $<1>$ | System Response Frequency | Sets the response frequency of the mechanical system connected to the motor. <br> Oscillation may result if set too high. | Default: 10.0 Hz <br> Min.: 0.1 <br> Max.: 50.0 | - |

$<1>$ Displayed only when performing Inertia Tuning or ASR Gain Auto-Tuning (T1-01 = 8 or T2-01 $=9$ ).
$<2>$ Default setting is dependent on parameter E5-01, Motor Code Selection.
$<3>$ Default setting is dependent on parameters C6-01, Drive Duty Selection, and o2-04, Drive Model Selection.

## B. 13 U: Monitors

Monitor parameters allow the user to view drive status, fault information, and other data concerning drive operation.

- U1: Operation Status Monitors

| No. (Addr. Hex) | Name | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \hline \text { U1-01 } \\ (40) \\ \hline \end{gathered}$ | Frequency Reference | Monitors the frequency reference. Display units are determined by o1-03. | 10 V : Max frequency | 0.01 Hz |
| $\begin{gathered} \text { U1-02 } \\ (41) \end{gathered}$ | Output Frequency | Displays the output frequency. Display units are determined by o1-03. | 10 V : Max frequency | 0.01 Hz |
| $\begin{aligned} & \text { U1-03 } \\ & (42) \end{aligned}$ | Output Current | Displays the output current. <br> Note: The unit is expressed in 1 A for models CIMR-AD4A0930 and 4A1200. | 10 V: Drive rated current | <1> <2> |
| U1-04 <br> (43) | Control Method | 0: V/f Control <br> 1: V/f Control with PG <br> 2: Open Loop Vector Control <br> 3: Closed Loop Vector Control | No signal output available | - |
| U1-05 <br> (44) | Motor Speed | Displays the motor speed feedback. Display units are determined by o1-03. | 10 V : Max frequency | 0.01 Hz |
| $\begin{gathered} \hline \text { U1-06 } \\ (45) \end{gathered}$ | Output Voltage Reference | Displays the output voltage. | 10 V : 200 Vrms ${ }^{\text {<3> }}$ | 0.1 Vac |
| $\begin{gathered} \text { U1-07 } \\ (46) \\ \hline \end{gathered}$ | DC Bus Voltage | Displays the DC bus voltage. | $10 \mathrm{~V}: 400 \mathrm{~V}^{\text {<3> }}$ | 1 Vdc |
| $\begin{gathered} \text { U1-08 } \\ (47) \\ \hline \end{gathered}$ | Output Power | Displays the output power (this value is calculated internally). | 10 V : Drive rated power (kW) | <4> |

| No. <br> (Addr. <br> Hex) | Name |  | Description |
| :--- | :--- | :--- | :--- | :--- |

$<1>$ The number of decimal places in the parameter value depends on the drive model and the ND/HD selection in parameter C6-01. This value has two decimal places $(0.01 \mathrm{~A})$ if the drive is set for a maximum applicable motor capacity up to and including 11 kW , and one decimal place ( 0.1 A ) if the maximum applicable motor capacity is higher than 11 kW .
$<2>$ When reading the value of this monitor via MEMOBUS/Modbus, a value of 8192 is equal to $100 \%$ of the drive rated output current.
$<3>$ Values shown are specific to 200 V class drives. Double the value for 400 V class drives. Multiply the value by 2.875 for 600 V class drives.
$<4>$ The display resolution depends on the ND/HD selection in parameter C6-01. This value has two decimal places ( 0.01 kW ) if the drive is set for a maximum applicable motor capacity up to and including 11 kW , and one decimal place ( 0.1 kW ) if the maximum applicable motor capacity is higher than 11 kW .

## - U2: Fault Trace

| No. (Addr. Hex) | Name | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { U2-01 } \\ (80) \end{gathered}$ | Current Fault | Displays the current fault. | No signal output available | - |
| $\begin{gathered} \hline \text { U2-02 } \\ (81) \end{gathered}$ | Previous Fault | Displays the previous fault. | No signal output available | - |
| $\begin{gathered} \hline \text { U2-03 } \\ (82) \end{gathered}$ | Frequency Reference at Previous Fault | Displays the frequency reference at the previous fault. | No signal output available | 0.01 Hz |
| $\begin{gathered} \text { U2-04 } \\ (83) \end{gathered}$ | Output Frequency at Previous Fault | Displays the output frequency at the previous fault. | No signal output available | 0.01 Hz |
| $\begin{gathered} \text { U2-05 } \\ (84) \end{gathered}$ | Output Current at Previous Fault | Displays the output current at the previous fault. | No signal output available | <1> <2> |
| $\begin{gathered} \text { U2-06 } \\ (85) \end{gathered}$ | Motor Speed at Previous Fault | Displays the motor speed at the previous fault. | No signal output available | 0.01 Hz |
| $\begin{gathered} \text { U2-07 } \\ (86) \end{gathered}$ | Output Voltage at Previous Fault | Displays the output voltage at the previous fault. | No signal output available | 0.1 Vac |
| $\begin{aligned} & \text { U2-08 } \\ & (87) \end{aligned}$ | DC Bus Voltage at Previous Fault | Displays the DC bus voltage at the previous fault. | No signal output available | 1 Vdc |
| $\begin{gathered} \text { U2-09 } \\ (88) \end{gathered}$ | Output Power at Previous Fault | Displays the output power at the previous fault. | No signal output available | 0.1 kW |
| $\begin{gathered} \text { U2-10 } \\ (89) \end{gathered}$ | Torque Reference at Previous Fault | Displays the torque reference at the previous fault. | No signal output available | 0.1\% |
| $\begin{gathered} \mathrm{U} 2-11 \\ (8 \mathrm{~A}) \end{gathered}$ | Input Terminal Status at Previous Fault | Displays the input terminal status at the previous fault. Displayed as in U1-10. | No signal output available | - |
| $\begin{gathered} \text { U2-12 } \\ (8 \mathrm{~B}) \end{gathered}$ | Output Terminal Status at Previous Fault | Displays the output status at the previous fault. Displays the same status displayed in U1-11. displayed in U1-11. | No signal output available | - |
| $\begin{gathered} \hline \text { U2-13 } \\ (8 \mathrm{C}) \\ \hline \end{gathered}$ | Drive Operation Status at Previous Fault | Displays the operation status of the drive at the previous fault. Displays the same status displayed in U1-12. | No signal output available | - |
| $\begin{aligned} & \text { U2-14 } \\ & \text { (8D) } \end{aligned}$ | Cumulative Operation Time at Previous Fault | Displays the cumulative operation time at the previous fault. | No signal output available | 1 h |
| $\begin{aligned} & \text { U2-15 } \\ & \text { (7E0) } \end{aligned}$ | Soft Starter Speed Reference at Previous Fault | Displays the speed reference for the soft starter at the previous fault. | No signal output available | 0.01 Hz |
| $\begin{aligned} & \text { U2-16 } \\ & \text { (7E1) } \end{aligned}$ | Motor q-Axis Current at Previous Fault | Displays the q -axis current for the motor at the previous fault. | No signal output available | 0.10\% |
| $\begin{aligned} & \text { U2-17 } \\ & \text { (7E2) } \end{aligned}$ | Motor d-Axis Current at Previous Fault | Displays the d-axis current for the motor at the previous fault. | No signal output available | 0.10\% |
| $\begin{aligned} & \text { U2-19 } \\ & \text { (7EC) } \end{aligned}$ | Rotor Deviation at Previous Fault | Displays the degree of rotor deviation when the most recent fault occurred (same status will appear as shown in U6-10). | No signal output available | 0.1 deg |
| $\begin{gathered} \hline \text { U2-20 } \\ (8 \mathrm{E}) \\ \hline \end{gathered}$ | Heatsink Temperature at Previous Fault | Displays the temperature of the heatsink when the most recent fault occurred. | No signal output available | $1{ }^{\circ} \mathrm{C}$ |
| $\begin{aligned} & \mathrm{U} 2-27 \\ & (7 \mathrm{FA}) \end{aligned}$ | Motor Temperature at Previous Fault (NTC) | Displays the temperature of the motor when the most recent fault occurred. <br> Note: This parameter is only available in models CIMR-AD4A0930 and 4A1200. | No signal output available | $1{ }^{\circ} \mathrm{C}$ |

$<1>$ The number of decimal places in the parameter value depends on the drive model and the ND/HD selection in parameter C6-01. This value has two decimal places $(0.01 \mathrm{~A})$ if the drive is set for a maximum applicable motor capacity up to and including 11 kW , and one decimal place $(0.1 \mathrm{~A})$ if the maximum applicable motor capacity is higher than 11 kW .
$<2>$ When reading the value of this monitor via MEMOBUS/Modbus, a value of 8192 is equal to $100 \%$ of the drive rated output current.

## U3: Fault History

| No. (Addr. Hex) | Name | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { U3-01 to } \\ & \text { U3-04 } \\ & (90 \text { to } 93 \\ & (800 \text { to } \\ & 803)) \end{aligned}$ | First to 4th Most Recent Fault | Displays the first to the fourth most recent faults. | No signal output available | - |
| $\begin{gathered} \hline \text { U3-05 to } \\ \text { U3-10 } \\ \text { (804 to } \\ 809) \end{gathered}$ | 5th to 10th Most Recent Fault | Displays the fifth to the tenth most recent faults. After ten faults, data for the oldest fault is deleted. The most recent fault appears in U3-01, with the next most recent fault appearing in U3-02. The data is moved to the next monitor parameter each time a fault occurs. | No signal output available | - |
| $\begin{gathered} \text { U3-11 to } \\ \text { U3-14 } \\ \text { (94 to } 97 \\ (80 \mathrm{~A} \text { to } \\ 80 \mathrm{D}) \text { ) } \end{gathered}$ | Cumulative Operation Time at 1st to 4th Most Recent Fault | Displays the cumulative operation time when the first to the fourth most recent faults occurred. | No signal output available | 1 h |
| $\begin{aligned} & \hline \text { U3-15 to } \\ & \text { U3-20 } \\ & \text { (80E to } \\ & 813) \end{aligned}$ | Cumulative Operation Time at 5th to 10th Most Recent Fault | Displays the cumulative operation time when the fifth to the tenth most recent faults occurred. | No signal output available | 1 h |

## - U4: Maintenance Monitors

| No. (Addr. Hex) | Name | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { U4-01 } \\ & (4 \mathrm{C}) \end{aligned}$ | Cumulative Operation Time | Displays the cumulative operation time of the drive. The value for the cumulative operation time counter can be reset in parameter o4-01. Use parameter o4-02 to determine if the operation time should start as soon as the power is switched on or only while the Run command is present. The maximum number displayed is 99999 , after which the value is reset to 0 . | No signal output available | 1 h |
| $\begin{gathered} \text { U4-02 } \\ (75) \end{gathered}$ | Number of Run Commands | Displays the number of times the Run command is entered. Reset the number of Run commands using parameter 04-13. This value will reset to 0 and start counting again after reaching 65535. | No signal output available | 1 Time |
| $\begin{gathered} \text { U4-03 } \\ (67) \end{gathered}$ | Cooling Fan Operation Time | Displays the cumulative operation time of the cooling fan. The default value for the fan operation time is reset in parameter 04-03. This value will reset to 0 and start counting again after reaching 99999. | No signal output available | 1 h |
| U4-04 (7E) | Cooling Fan Maintenance | Displays main cooling fan usage time as a percentage of its expected performance life. Parameter o4-03 can be used to reset this monitor. | No signal output available | 1\% |
| $\begin{gathered} \text { U4-05 } \\ (7 \mathrm{C}) \end{gathered}$ | Capacitor Maintenance | Displays main circuit capacitor usage time as a percentage of their expected performance life. Parameter 04-05 can be used to reset this monitor. | No signal output available | 1\% |
| $\begin{aligned} & \text { U4-06 } \\ & \text { (7D6) } \end{aligned}$ | Soft Charge Bypass Relay Maintenance | Displays the soft charge bypass relay maintenance time as a percentage of its estimated performance life. Parameter 04-07 can be used to reset this monitor. | No signal output available | 1\% |
| $\begin{aligned} & \text { U4-07 } \\ & \text { (7D7) } \\ & \hline \end{aligned}$ | IGBT Maintenance | Displays IGBT usage time as a percentage of the expected performance life. Parameter o4-09 can be used to reset this monitor. | No signal output available | 1\% |
| $\begin{gathered} \text { U4-08 } \\ (68) \\ \hline \end{gathered}$ | Heatsink Temperature | Displays the heatsink temperature. | 10 V: $100{ }^{\circ} \mathrm{C}$ | $1{ }^{\circ} \mathrm{C}$ |
| $\begin{gathered} \text { U4-09 } \\ (5 \mathrm{E}) \\ \hline \end{gathered}$ | LED Check | Lights all segments of the LED to verify that the display is working properly. | No signal output available | - |
| $\begin{gathered} \mathrm{U4} 4-10 \\ (5 \mathrm{C}) \end{gathered}$ | kWh, Lower 4 Digits | Monitors the drive output power. The value is shown as a 9-digit number displayed across two monitor parameters, U4-10 and U4-11. <br> Example: <br> 12345678.9 kWh is displayed as: <br> U4-10: 678.9 kWh <br> U4-11: 12345 MWh | No signal output available | 1 kWh |
| $\begin{gathered} \text { U4-11 } \\ (5 \mathrm{D}) \end{gathered}$ | kWh, Upper 5 Digits |  | No signal output available | 1 MWh |
| $\begin{aligned} & \text { U4-13 } \\ & \text { (7CF) } \end{aligned}$ | Peak Hold Current | Displays the highest current value that occurred during run. | No signal output available | $\underset{\langle 1\rangle<2>}{0.01 \mathrm{~A}}$ |
| $\begin{aligned} & \text { U4-14 } \\ & \text { (7D0) } \end{aligned}$ | Peak Hold Output Frequency | Displays the output frequency when the current value shown in U4-13 occurred. | No signal output available | 0.01 Hz |
| $\begin{aligned} & \text { U4-16 } \\ & \text { (7D8) } \end{aligned}$ | Motor Overload Estimate (oL1) | Shows the value of the motor overload detection accumulator. $100 \%$ is equal to the oL1 detection level. | 10 V : $100 \%$ | 0.1\% |

| No. (Addr. Hex) | Name | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \mathrm{U} 4-18 \\ & (7 \mathrm{DA}) \end{aligned}$ | Frequency Reference Source Selection | Displays the source for the frequency reference as XY-nn. <br> $X$ : indicates which reference is used: <br> $1=$ Reference 1 (b1-01) <br> $2=$ Reference 2 (b1-15) <br> Y-nn: indicates the reference source <br> 0-01 = Digital operator <br> 1-01 $=$ Analog (terminal A1) <br> $1-02=$ Analog (terminal A2) <br> 1-03 = Analog (terminal A3) <br> 2-02 to 17 = Multi-step speed (d1-02 to 17) <br> 3-01 = MEMOBUS/Modbus communications <br> 4-01 = Communication option card <br> 5-01 = Pulse input <br> 7-01 = DWEZ | No signal output available | - |
| U4-19 <br> (7DB) | Frequency Reference from MEMOBUS/Modbus Comm. | Displays the frequency reference provided by MEMOBUS/Modbus (decimal). | No signal output available | 0.01\% |
| $\begin{aligned} & \mathrm{U} 4-20 \\ & (7 \mathrm{DC}) \end{aligned}$ | Option Frequency <br> Reference | Displays the frequency reference input by an option card (decimal). | No signal output available | - |
| $\begin{aligned} & \text { U4-21 } \\ & \text { (7DD) } \end{aligned}$ | Run Command Source Selection | Displays the source for the Run command as XY-nn. <br> X: Indicates which Run source is used: <br> 1 = Reference 1 (b1-02) <br> $2=$ Reference 2 (b1-16) <br> Y: Input power supply data <br> $0=$ Digital operator <br> $1=$ External terminals <br> $3=$ MEMOBUS/Modbus communications <br> $4=$ Communication option card <br> 7 = DWEZ <br> nn: Run command limit status data <br> 00: No limit status. <br> 01: Run command was left on when stopped in the PRG mode <br> 02: Run command was left on when switching from LOCAL to REMOTE operation <br> 03: Waiting for soft charge bypass contactor after power up (Uv or Uv1 flashes after 10 s ) <br> 04: Waiting for "Run command prohibited" time period to end <br> 05: Fast Stop (digital input, digital operator) <br> 06: b1-17 (Run command given at power-up) <br> 07: During baseblock while coast to stop with timer <br> 08: Frequency reference is below minimal reference during baseblock <br> 09: Waiting for Enter command | No signal output available | - |
| $\begin{aligned} & \mathrm{U} 4-22 \\ & (7 \mathrm{DE}) \end{aligned}$ | MEMOBUS/Modbus <br> Communications Reference | Displays the drive control data set by MEMOBUS/Modbus communications register no. 0001 H as a four-digit hexadecimal number. | No signal output available | - |
| $\begin{aligned} & \mathrm{U4} 4-23 \\ & (7 \mathrm{DF}) \end{aligned}$ | Communication Option Card Reference | Displays drive control data set by an option card as a four-digit hexadecimal number. | No signal output available | - |
| $\begin{aligned} & \mathrm{U} 4-32 \\ & (7 \mathrm{FB}) \end{aligned}$ | Motor Temperature (NTC) | Displays the motor temperature (NTC). <br> U4-32 will display " $20^{\circ} \mathrm{C}$ " when a multi-function analog input is not set for motor thermistor input ( $\mathrm{H} 1-\square \square=17 \mathrm{H}$ ). <br> Note: This parameter is only available in models CIMR-AD4A0930 and 4A1200. | $200{ }^{\circ} \mathrm{C}$ | $1{ }^{\circ} \mathrm{C}$ |
| U4-37 <br> (1044) | oH Alarm Location Monitor | Displays the module where the oH alarm occurred as a binary number. <br> Note: This parameter is only available in models CIMR-AD4A0930 and 4A1200. | No signal output available | - |
| $\begin{aligned} & \text { U4-38 } \\ & (1045) \end{aligned}$ | FAn Alarm Location Monitor | Displays the module where the FAn alarm occurred as a binary number. <br> Note: This parameter is only available in models CIMR-AD4A0930 and 4A1200. | No signal output available | - |
| $\begin{aligned} & \text { U4-39 } \\ & (1046) \end{aligned}$ | voF Alarm Location Monitor | Displays the module where the voF alarm occurred as a binary number. <br> Note: This parameter is only available in models CIMR-AD4A0930 and 4A1200. | No signal output available | - |

$<1>$ When reading the value of this monitor via MEMOBUS/Modbus, a value of 8192 is equal to $100 \%$ of the drive rated output current.
$<2>$ The unit is 1 A in models CIMR-AD4A0930 and 4A1200.

## U5: PID Monitors

| No. (Addr. Hex) | Name | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \hline \text { U5-01 } \\ (57) \end{gathered}$ | PID Feedback | Displays the PID feedback value. | 10 V : $100 \%$ | 0.01\% |
| $\begin{gathered} \text { U5-02 } \\ (63) \end{gathered}$ | PID Input | Displays the amount of PID input (deviation between PID setpoint and feedback). | 10 V : $100 \%$ | 0.01\% |
| $\begin{gathered} \text { U5-03 } \\ (64) \end{gathered}$ | PID Output | Displays PID control output. | 10 V : $100 \%$ | 0.01\% |
| $\begin{gathered} \text { U5-04 } \\ (65) \\ \hline \end{gathered}$ | PID Setpoint | Displays the PID setpoint. | 10 V : $100 \%$ | 0.01\% |
| $\begin{aligned} & \hline \text { U5-05 } \\ & \text { (7D2) } \end{aligned}$ | PID Differential Feedback | Displays the 2nd PID feedback value if differential feedback is used (H3$\square \square=16$ ). | 10 V : $100 \%$ | 0.01\% |
| $\begin{aligned} & \text { U5-06 } \\ & \text { (7D3) } \end{aligned}$ | PID Adjusted Feedback | Displays the difference of both feedback values if differential feedback is used (U5-01 - U5-05). If differential feedback is not used, then U5-01 and U5-06 will be the same. | 10 V : $100 \%$ | 0.01\% |
| $\begin{gathered} \text { U5-21 } \\ \text { (872) } \\ <1> \end{gathered}$ | Automatically Calculated Energy Saving Coefficient Ki Value | Displays the energy saving coefficient Ki value. <br> Note: This parameter is not available in models CIMR-A $\square 4 A 0930$ and 4A1200. | No signal output available | 0.01 |
| $\begin{gathered} \text { U5-22 } \\ (873) \\ <1> \end{gathered}$ | Automatically Calculated Energy Saving Coefficient Kt Value | Displays the energy saving coefficient Kt value. <br> Note: This parameter is not available in models CIMR-A $\square 4 A 0930$ and 4A1200. | No signal output available | 0.01 |

$<1>$ Available in drive software versions 1015 and later.

## U6: Operation Status Monitors

| No. (Addr Hex) | Name | Description | Analog Output Level | Unit |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { U6-01 } \\ (51) \end{gathered}$ | Motor Secondary Current (Iq) | Displays the value of the motor secondary current (Iq). Motor rated secondary current is $100 \%$. | 10 V : Motor secondary rated current | 0.1\% |
| $\begin{gathered} \text { U6-02 } \\ (52) \\ \hline \end{gathered}$ | Motor Excitation Current (Id) | Displays the value calculated for the motor excitation current (Id). Motor rated secondary current is $100 \%$. | 10 V : Motor secondary rated current | 0.1\% |
| $\begin{gathered} \text { U6-03 } \\ (54) \end{gathered}$ | ASR Input | Displays the input and output values when using ASR control. | 10 V : Max frequency | 0.01\% |
| $\begin{gathered} \text { U6-04 } \\ (55) \\ \hline \end{gathered}$ | ASR Output |  | 10 V : Motor secondary rated current |  |
| U6-05 (59) | Output Voltage Reference $(\mathrm{Vq})$ | Output voltage reference (Vq) for the q-Axis. | 10 V : 200 Vrms ${ }^{<1>}$ | 0.1 Vac |
| $\begin{gathered} \text { U6-06 } \\ (5 \mathrm{~A}) \\ \hline \end{gathered}$ | Output Voltage Reference (Vd) | Output voltage reference (Vd) for the d-Axis. | 10 V : 200 Vrms ${ }^{<1>}$ | 0.1 Vac |
| $\begin{gathered} \hline \text { U6-07 } \\ (5 \mathrm{~F}) \\ \hline \end{gathered}$ | q-Axis ACR Output | Displays the output value for current control relative to motor secondary current (q-Axis). | $10 \mathrm{~V}: 200$ Vrms ${ }^{<1>}$ | 0.1\% |
| U6-08 (60) | d-Axis ACR Output | Displays the output value for current control relative to motor secondary current (d-Axis). | $110 \mathrm{~V}: 200$ Vrms ${ }^{\text {<1> }}$ | 0.1\% |
| $\begin{aligned} & \text { U6-09 } \\ & \text { (7C0) } \end{aligned}$ | Advance Phase Compensation ( $\Delta \theta$ ) | Displays the degree of forward phase correction after calculating the deviation of $\Delta \theta \mathrm{cmp}$. | $\begin{array}{\|l\|} \hline 10 \mathrm{~V}: 180 \mathrm{deg} \\ -10 \mathrm{~V}:-180 \mathrm{deg} \\ \hline \end{array}$ | 0.1 deg |
| $\begin{aligned} & \mathrm{U6-10} \\ & (7 \mathrm{C} 1) \end{aligned}$ | Control Axis Deviation $(\Delta \theta)$ | Displays the amount of deviation between the actual d-Axis / q-Axis and the $\gamma$-Axis / $\delta$-Axis used for motor control. | $\begin{aligned} & 10 \mathrm{~V}: 180 \mathrm{deg} \\ & -10 \mathrm{~V}:-180 \mathrm{deg} \end{aligned}$ | 0.1 deg |
| $\begin{aligned} & \text { U6-13 } \\ & \text { (7CA) } \end{aligned}$ | Flux Position Detection (sensor) | Monitors the value of the flux position detection (sensor). | $\begin{array}{\|l\|} \hline 10 \mathrm{~V}: 180 \mathrm{deg} \\ -10 \mathrm{~V}:-180 \mathrm{deg} \\ \hline \end{array}$ | 0.1 deg |
| $\begin{aligned} & \text { U6-14 } \\ & \text { (7CB) } \end{aligned}$ | Flux Position Estimation (observer) | Monitors the value of the flux position estimation. | $\begin{aligned} & 10 \mathrm{~V}: 180 \mathrm{deg} \\ & -10 \mathrm{~V}:-180 \mathrm{deg} \end{aligned}$ | 0.1 deg |
| $\begin{aligned} & \text { U6-18 } \\ & \text { (7CD) } \end{aligned}$ | Speed Detection PG1 Counter | Monitors the number of pulses for speed detection (PG1). | 10 V : 65536 | 1 pulse |
| $\begin{aligned} & \text { U6-19 } \\ & \text { (7E5) } \end{aligned}$ | Speed Detection PG2 Counter | Monitors the number of pulses for speed detection (PG2). | $10 \mathrm{~V}: 65536$ | 1 pulse |
| $\begin{aligned} & \text { U6-20 } \\ & \text { (7D4) } \end{aligned}$ | Frequency Reference Bias (Up/Down 2) | Displays the bias value used to adjust the frequency reference. | 10 V : Max frequency | 0.1\% |

| No. <br> (Addr. <br> Hex) | Name | Description | Analog Output <br> Level | Unit |
| :---: | :--- | :--- | :--- | :---: |
| U6-21 <br> (7D5) | Offset Frequency | Displays the frequency added to the main frequency reference. | - | $0.1 \%$ |
| U6-22 <br> (62) | Zero Servo Pulse <br> Movement | Displays how far the rotor has moved from its last position in PG pulses <br> (multiplied by 4). | 10 V: No. of pulses per <br> revolution | 1 |
| U6-25 <br> (6B) | Feedback Control Output | Output monitor for the ASR speed loop. | 10 V: Motor secondary <br> rated current | $0.01 \%$ |
| U6-26 <br> (6C) | Feed Forward Control <br> Output | Output monitor for Feed Forward control. | 10 V: Motor secondary <br> rated current | $0.01 \%$ |

$<1>$ Values shown are specific to 200 V class drives. Double the values for 400 V class drives. Multiply the values by 2.875 for 600 V class drives.

## - U8: DriveWorksEZ Monitors

| U8-01 to <br> U8-10 <br> $(1950$ to <br> $1959)$ | DriveWorksEZ Custom <br> Monitor 1 to 10 | DriveWorksEZ Custom Monitor 1 to 10 | 10 V: $100 \%$ |  |
| U8-11 to <br> U8-13 <br> $(195 A$ to <br> $195 C)$ | DriveWorksEZ Version <br> Control Monitor 1 to 3 | DriveWorksEZ Version Control Monitor 1 to 3 | $0.01 \%$ |  |

## Appendix: C

## Standards Compliance

This appendix explains the guidelines and criteria for maintaining CE and UL standards.
C. 1 EUROPEAN STANDARDS ..... 250
C. 2 UL AND CSA STANDARDS ..... 258
C. 3 SAFE DISABLE INPUT FUNCTION ..... 264

## C. 1 European Standards

Figure C. 1 CE Mark
The CE mark indicates compliance with European safety and environmental regulations. It is required for engaging in business and commerce in Europe.
European standards include the Machinery Directive for machine manufacturers, the Low Voltage Directive for electronics manufacturers, and the EMC guidelines for controlling noise.
This drive displays the CE mark based on the EMC guidelines and the Low Voltage Directive.

- Low Voltage Directive: 2006/95/EC
- EMC Guidelines: 2004/108/EC

Devices used in combination with this drive must also be CE certified and display the CE mark. When using drives displaying the CE mark in combination with other devices, it is ultimately the responsibility of the user to ensure compliance with CE standards. After setting up the device, verify that conditions meet European standards.

Note: 600 V class drives (models CIMR-A $\square 5 \square \square \square \square \square$ ) are not compliant with European Standards.

## CE Low Voltage Directive Compliance

This drive has been tested according to European standard IEC61800-5-1, and it fully complies with the Low Voltage Directive.
To comply with the Low Voltage Directive, be sure to meet the following conditions when combining this drive with other devices:

## - Area of Use

Do not use drives in areas with pollution higher than severity 2 and overvoltage category 3 in accordance with IEC664.

## Installing Fuses on the Input Side

Always install input fuses. Select fuses according to Table C.1.
Table C. 1 Recommended Input Fuse Selection

| Model CIMR-Aロ | Fuse Type |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Manufacturer: Bussmann |  |  |
|  | Model |  |  | Fuse Ampere Rating (A) |
| Three-Phase 200 V Class |  |  |  |  |
| 2A0004 | FWH-70B | 70 |  |  |
| 2A0006 | FWH-70B | 70 |  |  |

$<1>600 \mathrm{~V}$ class drives are not compliant with European Standards.

## Guarding Against Harmful Materials

When installing IP00/Open Type enclosure drives, use an enclosure that prevents foreign material from entering the drive from above or below.

## Grounding

The drive is designed to be used in T-N (grounded neutral point) networks. If installing the drive in other types of grounded systems, contact your Yaskawa representative for instructions.

## EMC Guidelines Compliance

This drive is tested according to European standards EN61800-3: 2004.

## EMC Filter Installation

The following conditions must be met to ensure continued compliance with guidelines. Refer to EMC Filters on page 255 for EMC filter selection.

## Installation Method

Verify the following installation conditions to ensure that other devices and machinery used in combination with this drive also comply with EMC guidelines.

1. Install an EMC noise filter to the input side specified by Yaskawa for compliance with European standards.
2. Place the drive and EMC noise filter in the same enclosure.
3. Use braided shield cable for the drive and motor wiring, or run the wiring through a metal conduit.
4. Keep wiring as short as possible. Ground the shield on both the drive side and the motor side.

$$
\begin{aligned}
& \text { A - Drive } \\
& \text { B - } 10 \mathrm{~m} \text { max cable length between } \\
& \text { drive and motor } \\
& \text { C - Motor }
\end{aligned}
$$

D - Metal conduit
E - Ground wire should be as short as possible.

Figure C. 2 Installation Method
5. Make sure the protective earthing conductor complies with technical standards and local safety regulations.

WARNING! Electrical Shock Hazard. Because the leakage current exceeds 3.5 mA in models CIMR-AD4A0414 to 4A1200, IEC 61800-5-1 states that either the power supply must be automatically disconnected in case of discontinuity of the protective earthing conductor, or a protective earthing conductor with a cross-section of at least $10 \mathrm{~mm}^{2}(\mathrm{Cu})$ or $16 \mathrm{~mm}^{2}(\mathrm{Al})$ must be used. Failure to comply may result in death or serious injury.

A - Braided shield cable B - Metal panel

C - Cable clamp (conductive)

Figure C. 3 Ground Area
6. Connect a DC link choke to minimize harmonic distortion. Refer to DC Link Chokes for EN 61000-3-2 Compliance on page 257.

Three-Phase 200 V / 400 V Class
 grounded paint or sealant)
C - Metal plate
D - Enclosure panel
E - Drive max. 10 m )
Figure C. 4 EMC Filter and Drive Installation for CE Compliance (Three-Phase $200 \mathrm{~V} / 400 \mathrm{~V}$ Class)

## EMC Filters

Install the drive with the EMC filters listed below to comply with the EN61800-3 requirements.
Table C. 2 EN61800-3 Filters

| Model CIMR-A口 | Filter Data (Manufacturer: Schaffner) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Type | Rated Current (A) | Weight (lb) | Dimensions [W x D x H] (in) | Y x X (in) | Figure |
| Three-Phase 200 V Class |  |  |  |  |  |  |

## DC Link Chokes for EN 61000-3-2 Compliance

Table C. 3 DC Link Chokes for Harmonic Reduction

| Drive Model <br> CIMR-AD | DC Link Chokes |  |
| :---: | :---: | :---: |
|  | Model |  |
| 2A0004 | 200 V Three-Phase Units | 5.4 A |
| 2A0006 | UZDA-B | 8 mH |
|  |  |  |
| 4A0002 | 400 V Three-Phase Units | 3.2 A |
| 4A0004 | UZDA-B | 28 mH |

Note: Contact Yaskawa for information about DC link chokes for other models.

## C. 2 UL and CSA Standards

## UL Standards Compliance

The UL/cUL mark applies to products in the United States and Canada. It indicates that UL has performed product testing and evaluation, and determined that their stringent standards for product safety have been met. For a product to receive UL certification, all components inside that product must also receive UL certification.

Figure C. 6 UL/cUL Mark
This drive is tested in accordance with UL standard UL508C and complies with UL requirements. The conditions described below must be met to maintain compliance when using this drive in combination with other equipment:

## Installation Area

Do not install the drive to an area greater than pollution degree 2 (UL standard).

## ■ Main Circuit Terminal Wiring

Yaskawa recommends using closed-loop crimp terminals on all drive models. UL/cUL approval requires the use of closedloop crimp terminals when wiring the drive main circuit terminals on models CIMR-AD2A0110 to 2A0415 and 4A0058 to 4A1200. Use only the tools recommended by the terminal manufacturer for crimping. Refer to Closed-Loop Crimp Terminal Size on page 258 for closed-loop crimp terminal recommendations.

## Closed-Loop Crimp Terminal Recommendations

Yaskawa recommends using closed-loop crimp terminals on all drive models. UL approval requires the use of crimp terminals when wiring the drive main circuit terminals on models CIMR-AD2A0110 to 2A0415 and 4A0058 to 4A1200. Use only crimping tools as specified by the crimp terminal manufacturer. Yaskawa recommends crimp terminals made by JST and Tokyo DIP (or equivalent) for the insulation cap.
Table C. 4 matches the wire gauges and terminal screw sizes with Yaskawa-recommended crimp terminals, tools, and insulation caps. Refer to the appropriate Wire Gauge and Torque Specifications table for the wire gauge and screw size for your drive model. Place orders with a Yaskawa representative or the Yaskawa sales department.
The closed-loop crimp terminal sizes and values listed in Table C. 4 are Yaskawa recommendations. Refer to local codes for proper selections.

Table C. 4 Closed-Loop Crimp Terminal Size

| Wire Gauge | Terminal Screws | Crimp Terminal Model Number | Tool |  | Insulation Cap Model No. | Code ${ }^{\text {<1> }}$ |

|  | M12 | 325-12 | YF-1, YET-300-1 | TD-328, TD-315 | TP-325 | 100-051-277 |

$<1>$ Codes refer to a set of three crimp terminals and three insulation caps. Prepare input and output wiring using two sets for each connection.
Example 1: Models with 300 kcmil for both input and output require one set for input terminals and one set for output terminals, so the user should order two sets of [100-051-272].
Example 2: Models with $4 / 0 \mathrm{AWG} \times 2 \mathrm{P}$ for both input and output require two sets for input terminals and two sets for output terminals, so the user should order four sets of [100-051-560].
Note: Use crimp insulated terminals or insulated shrink tubing for wiring connections. Wires should have a continuous maximum allowable temperature of $75^{\circ} \mathrm{C} 600 \mathrm{Vac}$ UL-approved vinyl-sheathed insulation.

## Input Fuse Installation

Provide fuse branch circuit protection using the fuses listed in Installing Fuses on the Input Side on page 250.

## Low Voltage Wiring for Control Circuit Terminals

Wire low voltage wires with NEC Class 1 circuit conductors. Refer to national state or local codes for wiring. Use a class 2 power supply for the control circuit terminal when not using the internal control power supply of the drive. Refer to NEC Article 725 Class 1, Class 2, and Class 3 Remote-Control, Signaling, and Power Limited Circuits for requirements concerning class 1 circuit conductors and class 2 power supplies.

Table C. 5 Control Circuit Terminal Power Supply

| Input / Output | Terminal Signal | Power Supply Specifications |
| :--- | :---: | :--- |
| Open Collector Outputs | P1, P2, PC, DM+, DM- | Requires class 2 power supply |
| Digital inputs | S1 to S8, SC, HC, H1, H2 | Use the internal LVLC power supply of the drive. Use class <br> 2 for external power supply. |
| Analog inputs / outputs | $+\mathrm{V},-\mathrm{V}, \mathrm{A} 1, \mathrm{~A} 2, \mathrm{~A} 3, \mathrm{AC}, \mathrm{AM}, \mathrm{FM}$ | Use the internal LVLC power supply of the drive. Use class <br> 2 for external power supply. |

## Drive Short Circuit Rating

The drive is suitable for use on a circuit capable of delivering not more than 100,000 RMS symmetrical Amperes, 240 Vac maximum ( 200 V Class), 480 Vac maximum ( 400 V Class), and 600 Vac maximum ( 600 V Class) when protected by Bussmann Type FWH or FWP fuses as specified in Installing Fuses on the Input Side on page 250.

## CSA Standards Compliance

Figure C. 7 CSA Mark

## CSA for Industrial Control Equipment

The drive is CSA-certified as Industrial Control Equipment Class 3211.
Specifically, the drive is certified to: CAN/CSA C22.2 No. 04-04 and CAN/CSA C22.2 No.14-05.

## - Drive Motor Overload Protection

Set parameter E2-01 (motor rated current) to the appropriate value to enable motor overload protection. The internal motor overload protection is UL listed and in accordance with the NEC and CEC.

## E2-01: Motor Rated Current

Setting Range: Model-dependent
Default Setting: Model-dependent
Parameter E2-01 protects the motor when parameter L1-01 is not set to 0 . The default for L1-01 is 1 , which enables protection for standard induction motors.
If Auto-Tuning has been performed successfully, the motor data entered to T1-04 is automatically written to parameter E2-01. If Auto-Tuning has not been performed, manually enter the correct motor rated current to parameter E2-01.

## L1-01: Motor Overload Protection Selection

The drive has an electronic overload protection function (oL1) based on time, output current, and output frequency that protects the motor from overheating. The electronic thermal overload function is UL-recognized, so it does not require an external thermal relay for single motor operation.
This parameter selects the motor overload curve used according to the type of motor applied.
Table C. 6 Overload Protection Settings

| Setting | Description |  |
| :---: | :--- | :--- |
| $\mathbf{0}$ | Disabled | Disabled the internal motor overload protection of the drive. |
| $\mathbf{1}$ | Standard fan-cooled motor (default) | Selects protection characteristics for a standard self-cooled motor with limited cooling capabilities <br> when running below the rated speed. The motor overload detection level (oL1) is automatically <br> reduced when running below the motor rated speed. |
| $\mathbf{2}$ | Drive duty motor with a speed range of 1:10 | Selects protection characteristics for a motor with self-cooling capability within a speed range of <br> 10:1. The motor overload detection level (oL1) is automatically reduced when running below <br> $1 / 10$ of the motor rated speed. |
| $\mathbf{3}$ | Vector motor with a speed range of 1:100 | Selects protection characteristics for a motor capable of cooling itself at any speed including zero <br> speed (externally cooled motor). The motor overload detection level (oL1) is constant over the <br> entire speed range. |
| $\mathbf{4}$ | Permanent Magnet motor with variable <br> torque | Selects protection characteristics for a variable torque PM motor. The motor overload detection <br> level (oL1) is automatically reduced when running below the motor rated speed. |
| $\mathbf{5}$ | Permanent Magnet motor with constant <br> torque | Selects protection characteristics for a constant torque PM motor. The motor overload detection <br> level (oL1) is constant over the whole speed range. |
| $\mathbf{6}$ | Standard fan-cooled motor (50 Hz) | Selects protection characteristics for a standard self-cooled motor with limited cooling capabilities <br> when running below the rated speed. The motor overload detection level (oL1) is automatically <br> reduced when running below the motor rated speed. |

When connecting the drive to more than one motor for simultaneous operation, disable the electronic overload protection $(\mathrm{L} 1-01=0)$ and wire each motor with its own motor thermal overload relay.
Enable motor overload protection (L1-01 = 1 to 5) when connecting the drive to a single motor, unless another motor overload preventing device is installed. The drive electronic thermal overload function causes an oL1 fault, which shuts off the output of the drive and prevents additional overheating of the motor. The motor temperature is continually calculated while the drive is powered up.

## L1-02: Motor Overload Protection Time

Setting Range: 0.1 to 5.0 min

## Factory Default: 1.0 min

Parameter L1-02 determines how long the motor is allowed to operate before the oL 1 fault occurs when the drive is running at 60 Hz and at $150 \%$ of the full load amp rating (E2-01) of the motor. Adjusting the value of L1-02 can shift the set of oL1 curves up the $y$ axis of the diagram below, but will not change the shape of the curves.

Figure C. 8 Motor Overload Protection Time

## - Precautionary Notes on External Heatsink (IP00/Open Type Enclosure)

When using an external heatsink, UL compliance requires covering exposed capacitors in the main circuit to prevent injury to surrounding personnel.
The portion of the external heatsink that projects out can be protected with the enclosure or with the appropriate capacitor cover after completing drive installation. Use Table C. 7 to match drive models with available capacitor covers. Order capacitor covers from a Yaskawa representative or directly from the Yaskawa sales department.

Table C. 7 Capacitor Cover

| Model CIMR-A口 | Code Number | Model | Figure |

## C. 3 Safe Disable Input Function

## Specifications

| Inputs/Outputs |  | Two Safe Disable inputs and one EDM output according to ISO13849-1 Cat. 3 PLd, IEC61508 <br> SIL2. $<1>$ |
| :--- | :---: | :--- |
| Operation Time |  | Time from input open to drive output stop is less than 1 ms. |
| Failure Probability | Demand Rate Low | PFD $=5.15 \mathrm{E}^{-5}$ |
|  | Demand Rate High/ <br> Continuous | PFH $=1.2 \mathrm{E}^{-9}$ |
|  | Performance Level |  | The Safe Disable inputs satisfy all requirements of Performance Level (PL) d according to <br> ISO13849-1 (DC from EDM considered). $<1>$ |

$<1>$ Terminals H1, H2, DM + , and DM- on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.

## Precautions

Note: Terminals H1, H2, DM + , and DM- on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.

DANGER! Sudden Movement Hazard. Improper use of the Safe Disable function can result in serious injury or even death. Make sure the whole system or machinery in which the Safe Disable function is used complies with safety requirements. When implementing the Safe Disable function into the safety system of a machine, perform a thorough risk assessment for the entire system to assure compliance with relevant safety norms.

DANGER! Sudden Movement Hazard. When using a PM motor, even if the drive output is shut off by the Safe Disable function, a breakdown of two output transistors can cause current to flow through the motor winding, resulting in a rotor movement for a maximum angle of 180 degrees (electrically). Make sure such a situation would have no effect on the safety of the application when using the Safe Disable function.

DANGER! Sudden Movement Hazard. The Safe Disable function can switch off the drive output, but does not cut the drive power supply and cannot electrically isolate the drive output from the input. Always shut off the drive power supply when performing maintenance or installations on the drive input side as well as the drive output side.

WARNING! Sudden Movement Hazard. When using the Safe Disable inputs, make sure to remove the wire links between terminals H1, H2, and HC that were installed prior to shipment. Failing to do so will keep the Safe Disable circuit from operating properly and can cause injury or even death.

NOTICE: All safety features (including Safe Disable) should be inspected daily and periodically. If the system is not operating normally, there is a risk of serious personal injury.

NOTICE: Only a qualified technician with a thorough understanding of the drive, the instruction manual, and safety standards should be permitted to wire, inspect, and maintain the Safe Disable input.

NOTICE: From the moment terminal inputs H 1 and H 2 have opened, it takes up to 1 ms for drive output to shut off completely. The sequence set up to trigger terminals H1 and H2 should make sure that both terminals remain open for at least 1 ms in order to properly interrupt drive output.

NOTICE: The Safe Disable Monitor (output terminals DM+ and DM-) should not be used for any other purpose than to monitor the Safe Disable status or to discover a malfunction in the Safe Disable inputs. The monitor output is not considered a safe output.

NOTICE: When utilizing the Safe Disable function, use only the EMC filters recommended in EMC Filters on page 255.

## Using the Safe Disable Function

Note: Terminals H1, H2, DM+, and DM- on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.
The Safe Disable inputs provide a stop function in compliance with "Safe Torque Off" as defined in the IEC61800-5-2. Safe Disable inputs have been designed to meet the requirements of the ISO13849-1, Category 3 PLd, and IEC61508, SIL2.

A Safe Disable Status Monitor for error detection in the safety circuit is also provided.

## Safe Disable Circuit

Note: Terminals H1, H2, DM+, and DM- on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.
The Safe Disable circuit consists of two independent input channels that can block the output transistors and provide a monitoring channel to indicate the status of those input channels.

The input can use the internal power supply of the drive or an external power supply and it will support Sink mode or Source mode. the mode selected for the digital input terminals S1 to S8 by switch S3 will also be used for the Safe Disable inputs. Refer to Sinking/Sourcing Mode Switch for Digital Inputs on page 69 for more information.
The Safe Disable Monitor uses a single channel photocoupler output. Refer to Output Terminals on page 65 for signal specifications when using this output.

Figure C. 11 Safe Disable Function Wiring Example (SINK Mode)

## Disabling and Enabling the Drive Output ("Safe Torque Off")

Note: Terminals H1, H2, DM + , and DM- on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.
Figure C. 12 illustrates the Safe Disable input operation.

Figure C. 12 Safe Disable Operation

## Entering the "Safe Torque Off" State

Note: Terminals H1, H2, DM+, and DM- on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.
Whenever either one Safe Disable input or both inputs open, the motor torque is shut off by switching off the drive output. If the motor was running before the Safe Disable inputs opened, then the motor will coast to stop, regardless of the stopping method set in parameter b1-03.
Notice that the "Safe Torque Off" state can only be achieved using the Safe Disable function. Removing the Run command stops the drive and shuts the output off (baseblock), but does not create a "Safe Torque Off" status.

Note: To avoid an uncontrolled stop during normal operation, make sure that the Safe Disable inputs are opened first when the motor has completely stopped.

## Returning to Normal Operation after Safe Disable

Note: Terminals H1, H2, DM + , and DM- on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.
The Safe Disable function can only be deactivated when a Run command is not active.

If Safe Disable was activated during stop, turn on both Safe Disable inputs by deactivating "Safe Torque Off" to resume normal operation.
If Safe Disable was activated during run, remove the Run command then turn on the Safe Disable inputs before restarting the drive.

## Safe Disable Monitor Output Function and Digital Operator Display

Note: Terminals H1, H2, DM+, and DM- on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.
Table C. 8 explains the drive output and Safe Disable monitor state depending on the Safe Disable inputs.
Table C. 8 Safety Input and EDM Terminal Status

| Safe Disable Input Status |  | Safe Disable Status <br> Monitor, <br> DM+ DM- | Drive Output Status | Digital Operator Display |
| :---: | :---: | :---: | :---: | :---: |
| Input 1, H1-HC | Input 2, H2-HC |  | Safely disabled, <br> "Safe Torque Off" | Hbb (flashes) |
| OFF | OFF | OFF | ON | Safely disabled, <br> "Safe Torque Off" |
| ON | ON | ON | Safely disabled, <br> "Safe Torque Off" | HbbF (flashes) |
| OFF | ON | ON | Baseblock, <br> ready for operation | Normal display |
| ON |  | ONashes) |  |  |

## Safe Disable Status Monitor

Note: Terminals H1, H2, DM + , and DM- on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.
With the Safe Disable monitor output (terminals DM+ and DM-), the drive provides a safety status feedback signal. This signal should be read by the device that controls the Safe Disable inputs (PLC or a safety relay) in order to prohibit leaving the "Safe Torque Off" status in case the safety circuit malfunctions. Refer to the instruction manual of the safety device for details on this function.

## Digital Operator Display

Note: Terminals H1, H2, DM+, and DM- on 600 V class models are designed to the functionality, but are not certified to EN61800-5-1, ISO13849 Cat. 3, IEC/EN61508 SIL2, Insulation coordination: class 1.

When both Safe Disable inputs are open, "Hbb" will flash in the digital operator display.
If one Safe Disable channel is on while the other is off, "HbbF" will flash in the display to indicate that there is a problem in the safety circuit or in the drive. This display should not appear under normal conditions if the Safe Disable circuit is utilized properly. Refer to Alarm Codes, Causes, and Possible Solutions on page 147 to resolve possible errors.

## Revision History

The revision dates and the numbers of the revised manuals appear on the bottom of the back cover．

| Date of Publication | Revision <br> Number | Section | Revised Content |

[^0]:    Upper Limits
    NOTICE: The drive is capable of running the motor up to 400 Hz . Be sure to set the upper limit for the frequency of the drive to prevent the possible danger of accidentally operating equipment at higher than rated speed. The default setting for the maximum output frequency is 60 Hz .

    ## DC Injection Braking

    NOTICE: Excessive current during DC Injection Braking and excessive duration of DC Injection Braking can cause motor overheat.
